For more details see the Product Attachments extension page.

Guide for Product Attachments for Magento 2

Provide customers with additional details about the products they purchase in your store. The extension allows you to add manuals, licenses, warranties and other downloadable information right on product pages. Equip your attachments of any format with catchy icons to attract customers' attention.

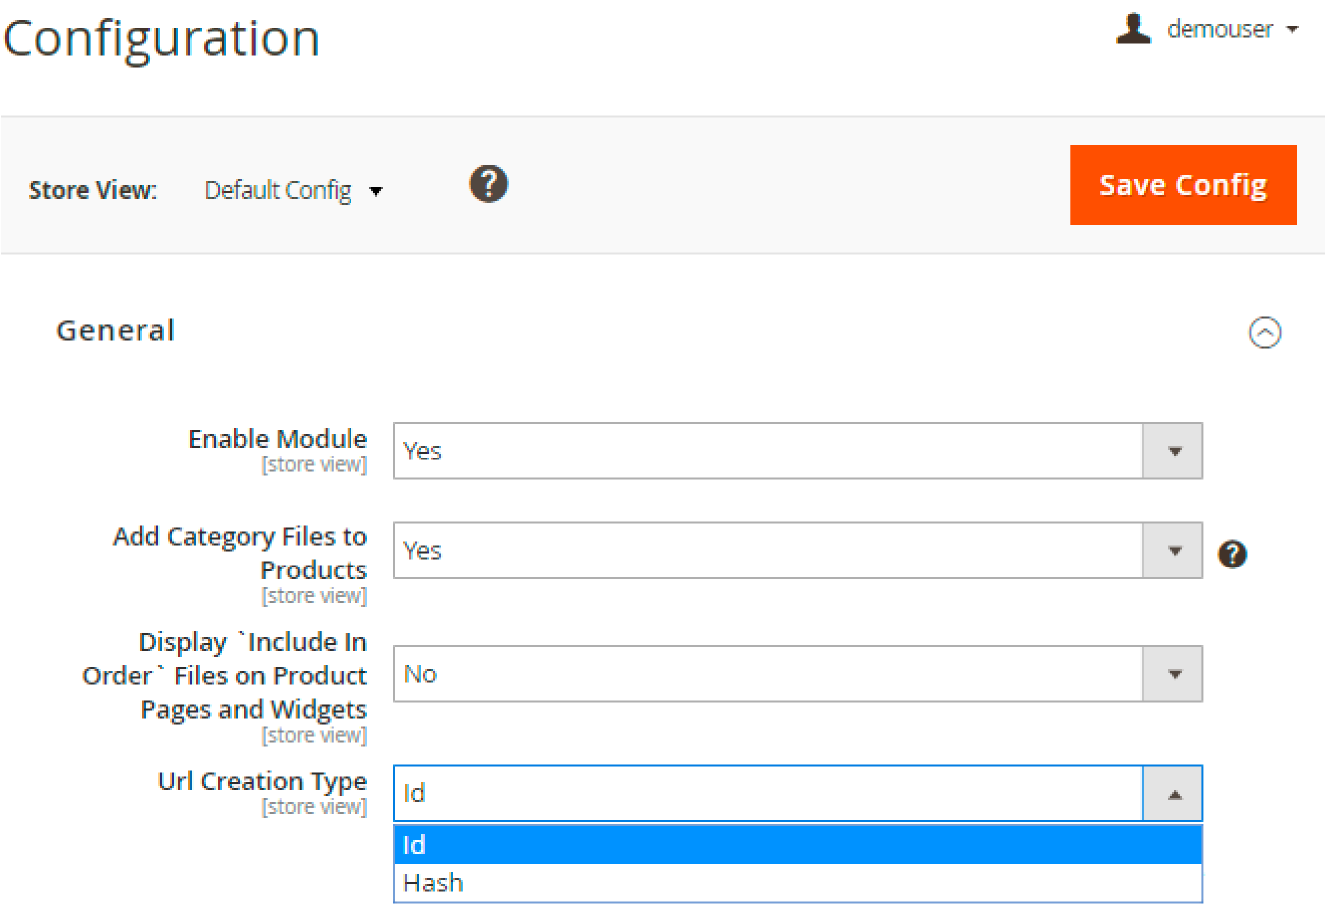
- Upload the unlimited number of attachments
- Support for any file types
- Track attachments downloads
- Equip files with catchy icons

Configuration

To configure general extension settings please go to **Stores → Configuration → Amasty Extensions → Product Attachments**.

General Settings

Expand the **General** tab.



Configuration

demouser

Store View: Default Config

Save Config

General

Enable Module [store view] — Yes

Add Category Files to Products [store view] — Yes

Display `Include In Order` Files on Product Pages and Widgets [store view] — No

Url Creation Type [store view] — Id

See your store performance in details with the Magento 2 Advanced Reports.

Enable Module - enable or disable the extension by clicking 'Yes' or 'No'.

Add Category Files to Products - if *YES*, the files will be attached to all category products. If *NO*, the files will not be attached to the products of the category. But you can display the category attachments with the help of widget.

Display `Include In Order` Files on Product Pages and Widgets - enable this option if you want to show files regarding ordered products on product pages and widgets.

Url Creation Type - select the type of URL that will be applied to the attachments: *ID* or *Hash*.

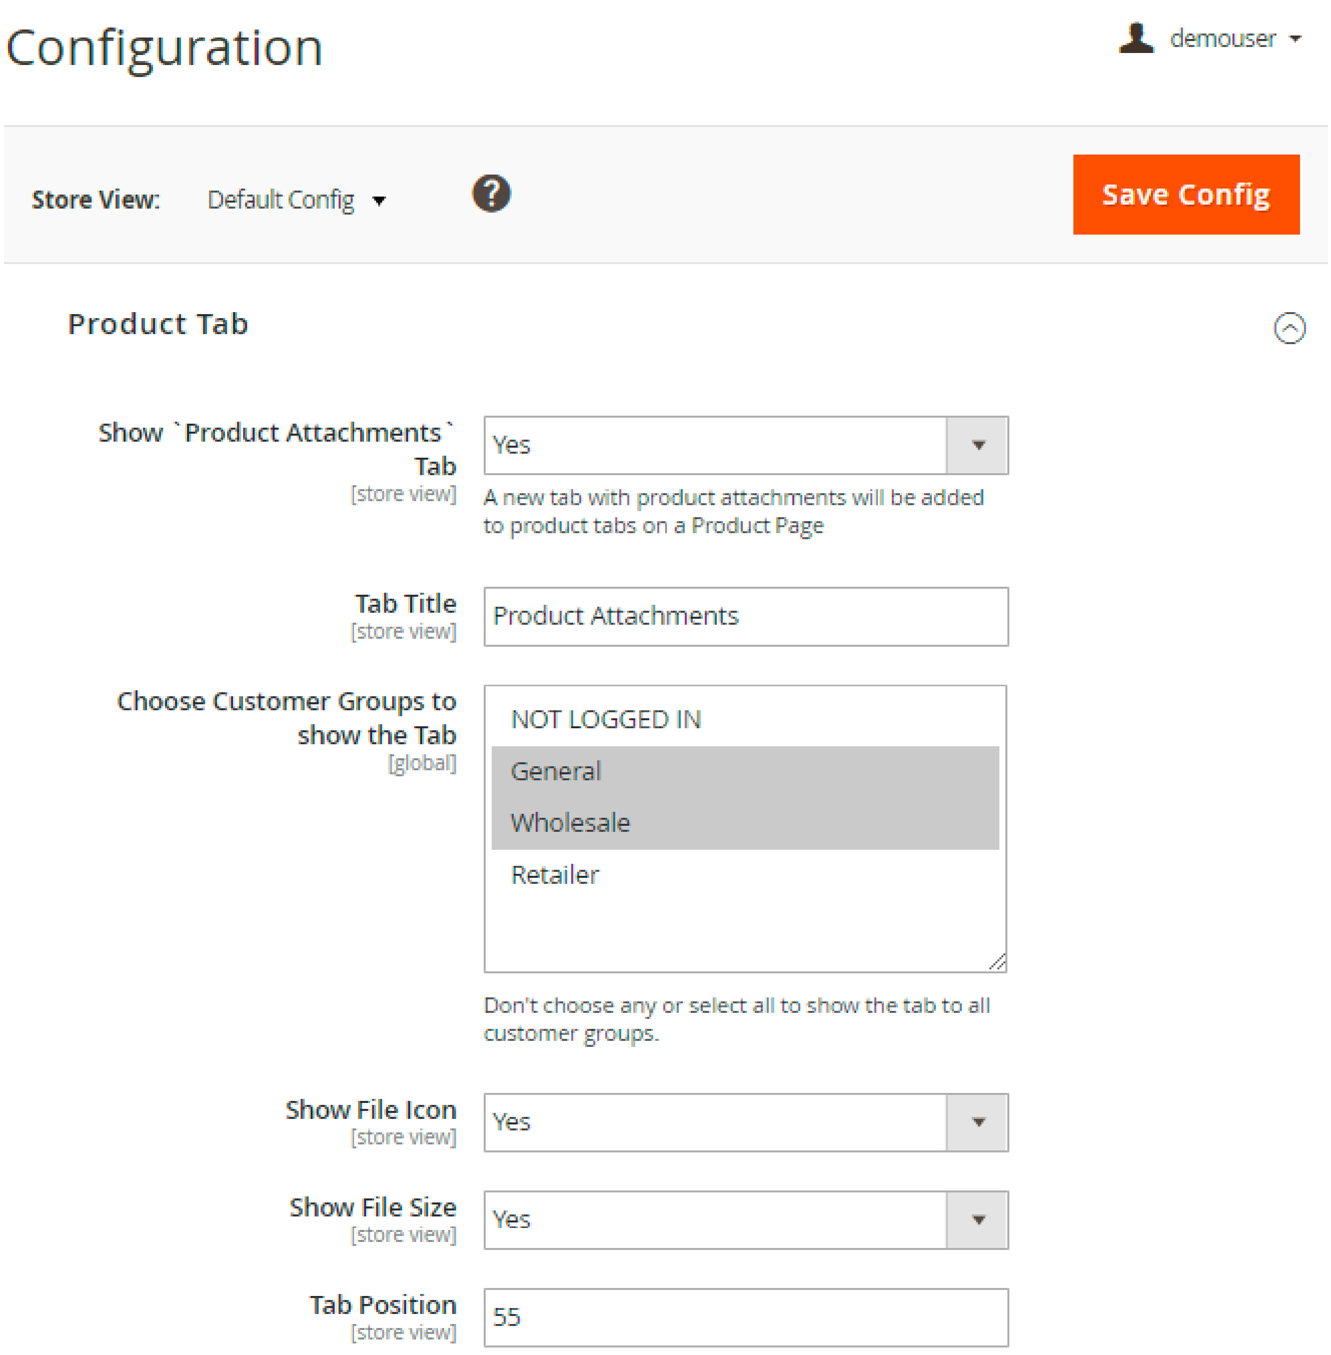
ID type URL example:

```
http://domain.zone/amfile/download/file/22
```

Hash type URL example:

```
http://domain.zone/amfile/download/file/8a9e07bad0166438b0
```

Product Tab



Configuration

demouser

Store View: Default Config

Save Config

Product Tab

Show `Product Attachments` Tab [store view]: Yes

A new tab with product attachments will be added to product tabs on a Product Page

Tab Title [store view]: Product Attachments

Choose Customer Groups to show the Tab [global]:

NOT LOGGED IN
General
Wholesale
Retailer

Don't choose any or select all to show the tab to all customer groups.

Show File Icon [store view]: Yes

Show File Size [store view]: Yes

Tab Position [store view]: 55

Show `Product Attachments` Tab - enable display of a new tab with product attachments in the description block on a Product Page.

Tab Title - specify the name for the tab with product attachments.

Choose Customer Groups to show the Tab - specify customer groups for which the attachments will be visible.

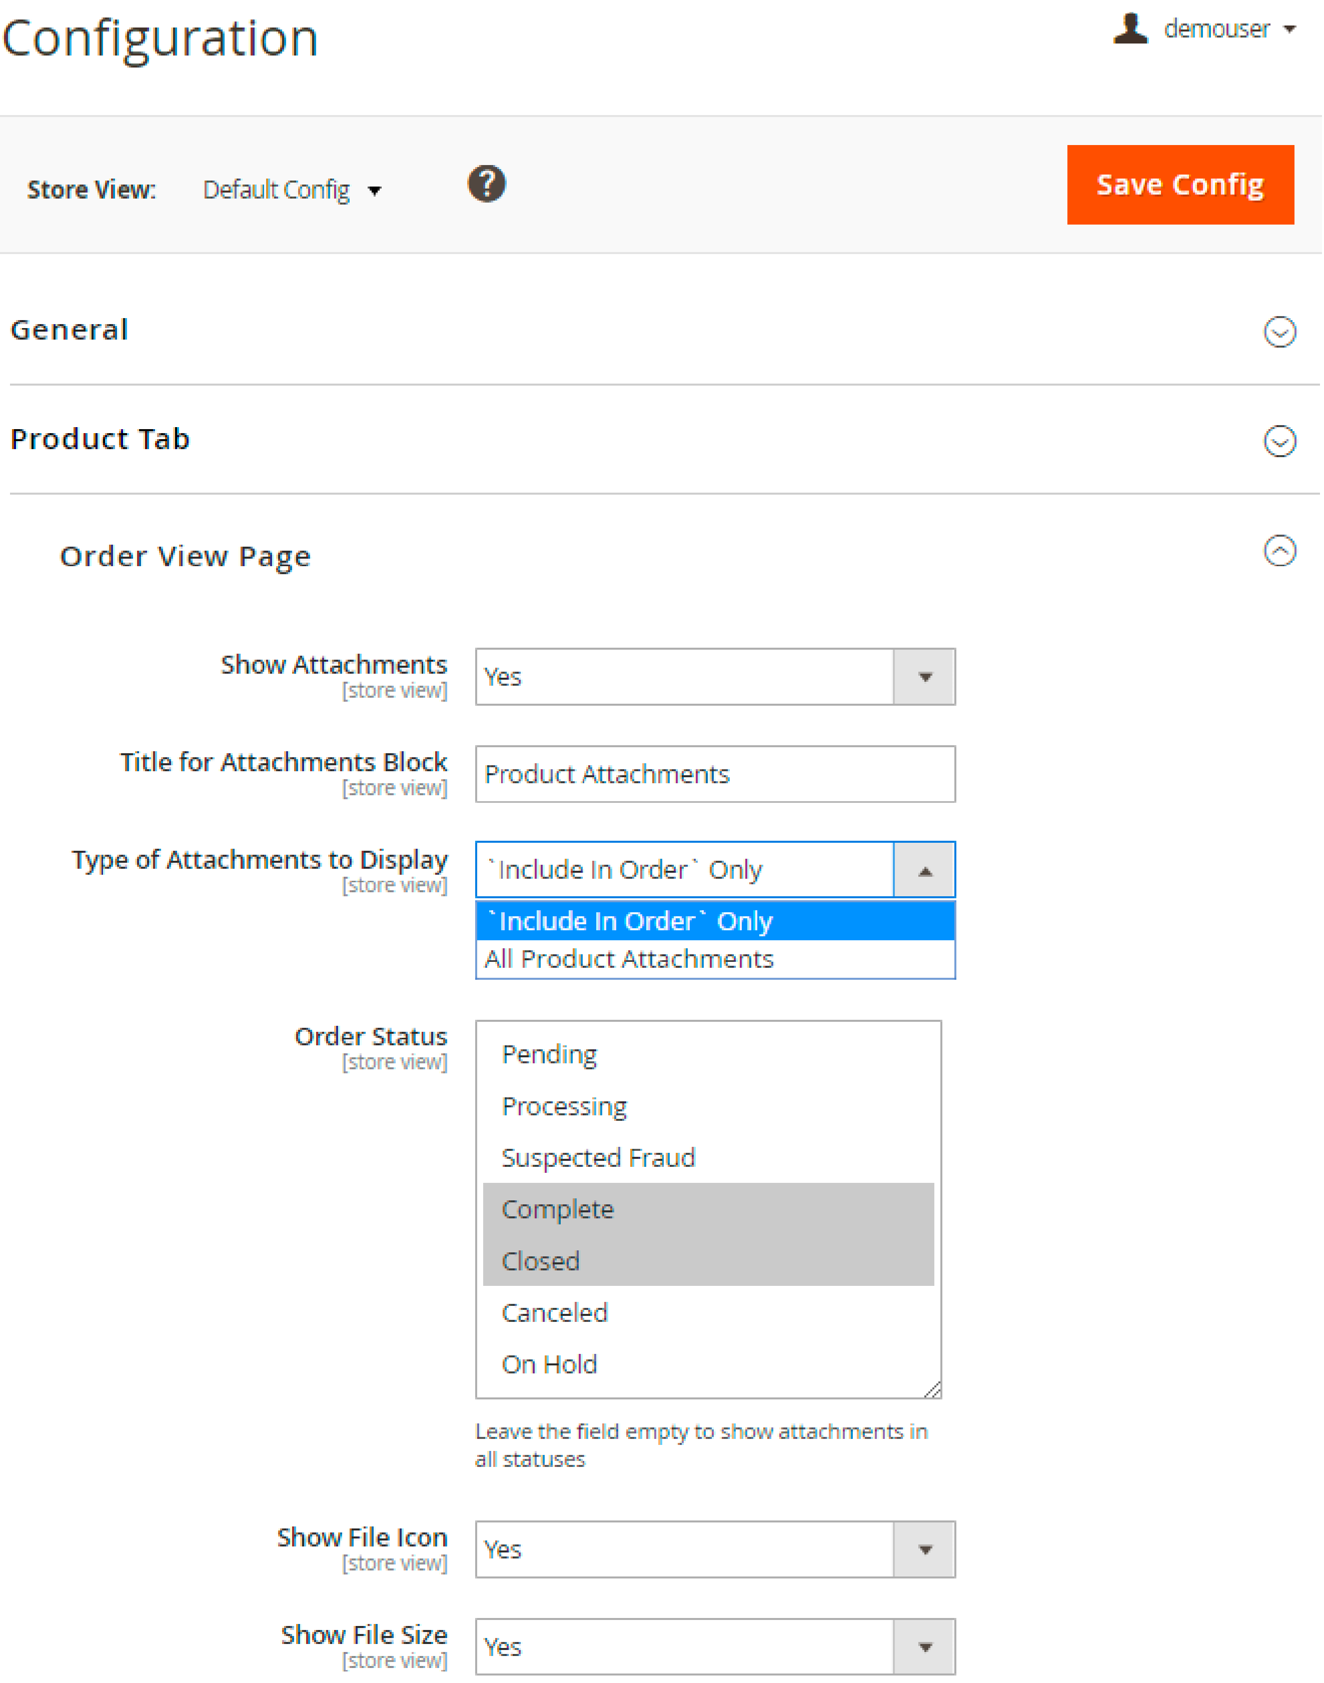
Show File Icon - make attachments more noticeable by showing file icons or turn off this option if needed.

Show File Size - enable this option to let your customers know about the size of the attachment.

Tab Position - specify the position for the product attachments among the other tabs.

To maintain the correct tabs display, please do NOT set the multiples of 10 (0,10,20, etc.). You may choose the following ranges: **11-19, 21-29** , etc. or use the numbers that contain 5 (**5, 15, 25,** etc.).

Order View Page



Configuration

Store View: Default Config

Order View Page

Show Attachments [store view] Yes

Title for Attachments Block [store view] Product Attachments

Type of Attachments to Display [store view] `Include In Order` Only

`Include In Order` Only
All Product Attachments

Order Status [store view]
Pending
Processing
Suspected Fraud
Complete
Closed
Canceled
On Hold

Leave the field empty to show attachments in all statuses

Show File Icon [store view] Yes

Show File Size [store view] Yes

Show Attachments - enable this option if you want to show attachments for ordered products.

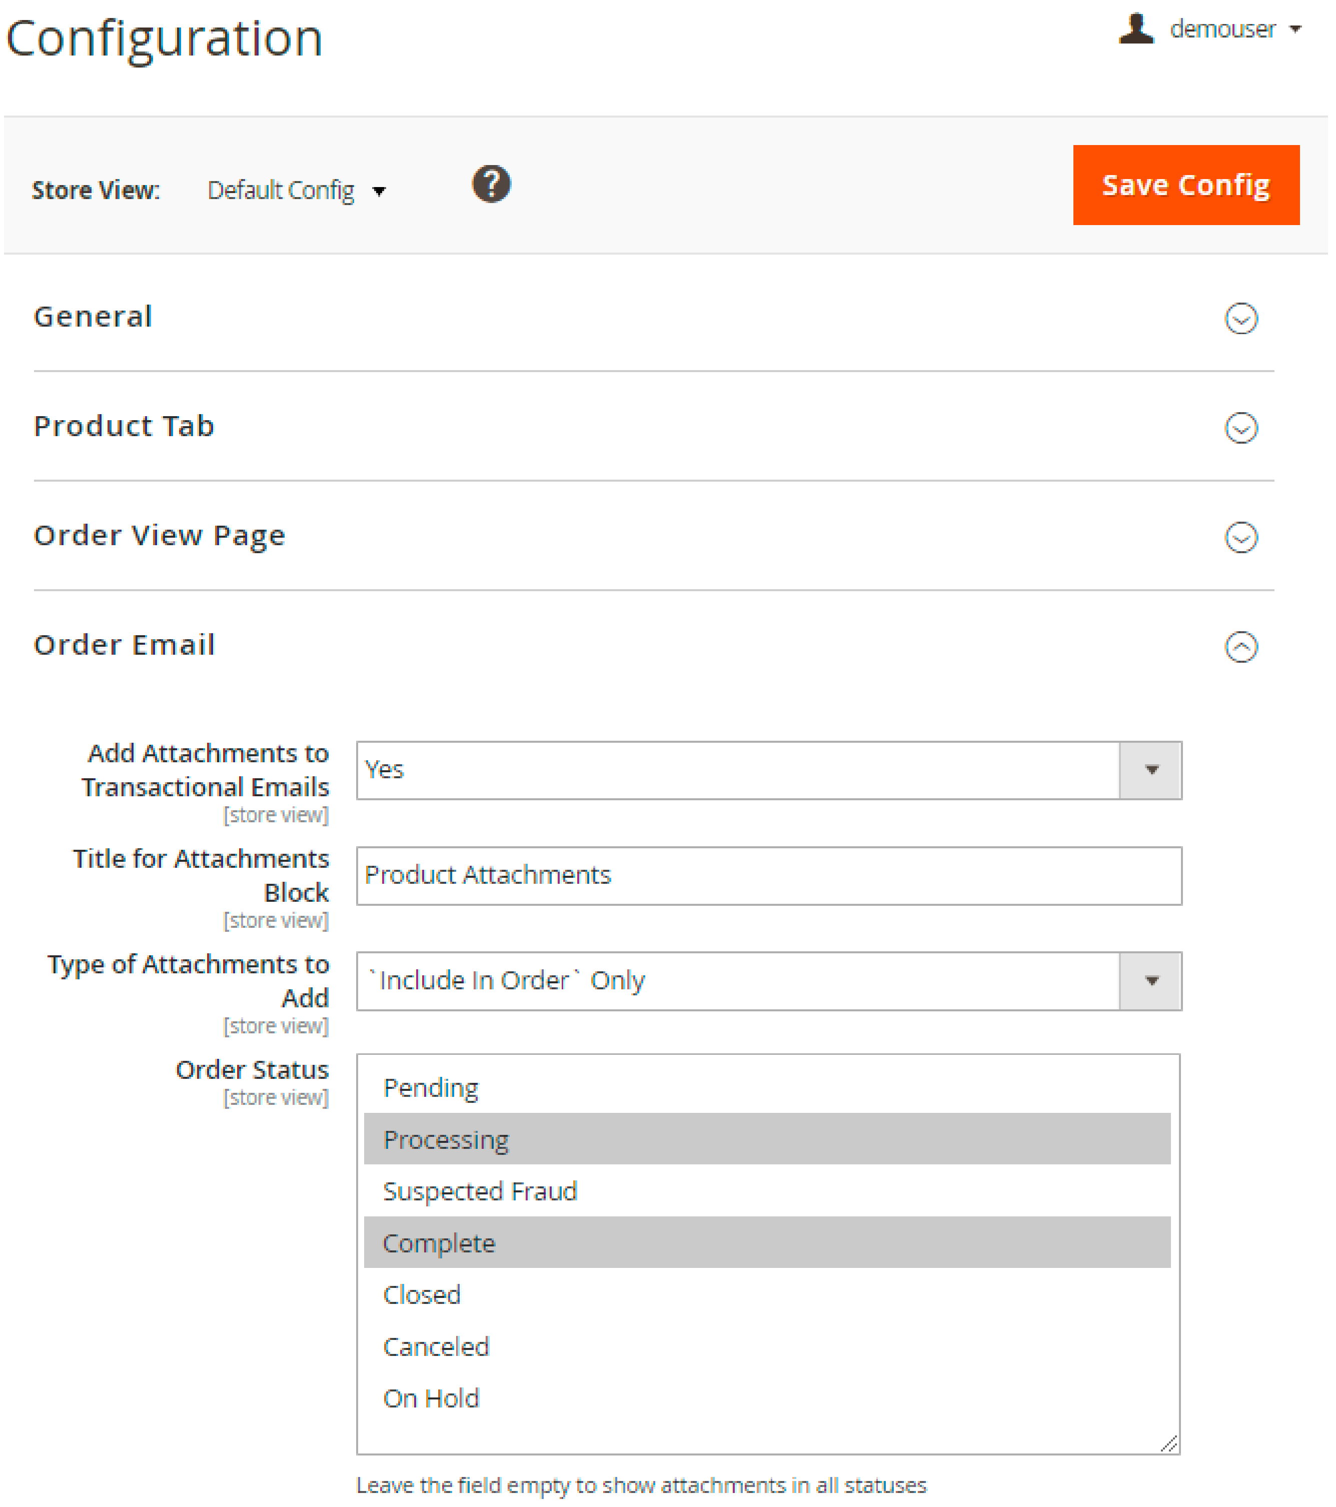
Title for Attachments Block - specify the title for attachments block on the Order View Page.

Type of Attachments to Display - show all product attachments or include them to the order only.

Order Status - choose order status according to which the attachments will be displayed. It is useful if you want to show files only when a purchase is completed.

Show or Hide **File Icon** and **File Size**.

Order Email



Add Attachments to Transactional Emails [store view]: Yes

Title for Attachments Block [store view]: Product Attachments

Type of Attachments to Add [store view]: `Include In Order` Only

Order Status [store view]: Pending, Processing (selected), Suspected Fraud, Complete (selected), Closed, Canceled, On Hold

Leave the field empty to show attachments in all statuses

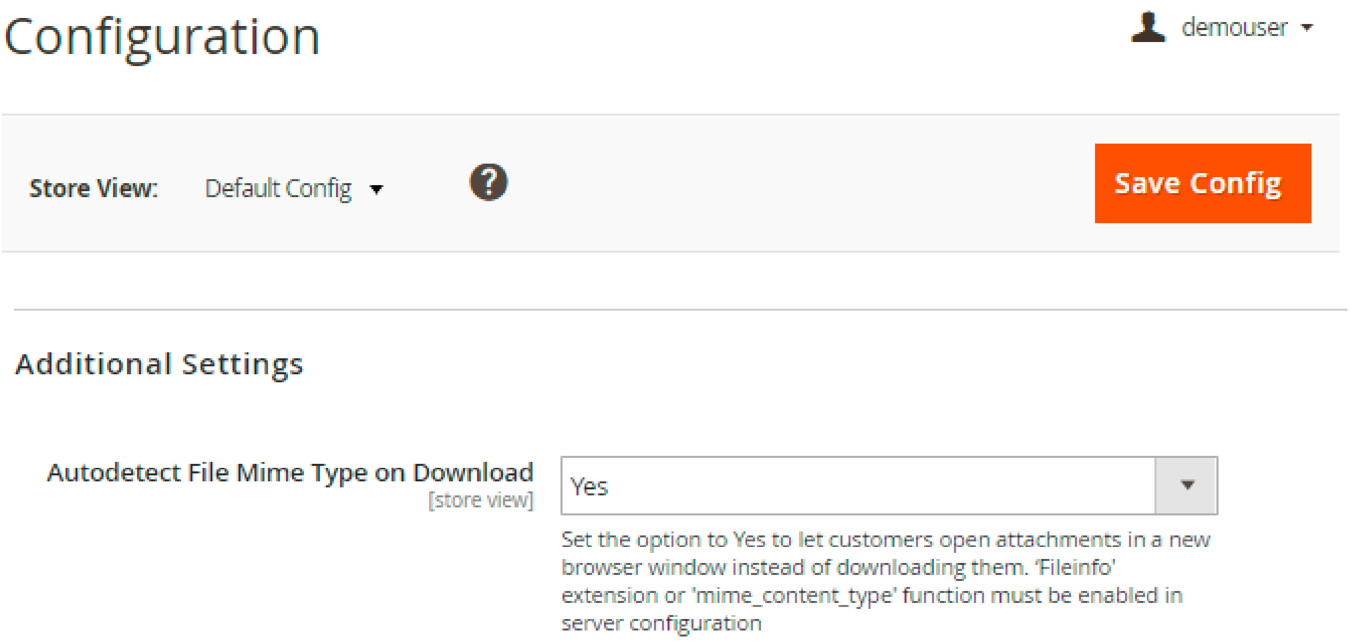
Add Attachments to Transactional Emails - include files to transactional emails to provide customers with the maximally detailed product description.

Title for Attachments Block - specify the title of the block that will be displayed in emails.

Type of Attachments to Add - add all the attachments or 'Include in Order' only to your transactional emails.

Order Status - select the status(es) that the orders must have to show attachments. Leave the field empty to show attachments in all statuses.

Additional Settings



Autodetect File Mime Type on Download [store view]: Yes

Set the option to Yes to let customers open attachments in a new browser window instead of downloading them. 'Fileinfo' extension or 'mime_content_type' function must be enabled in server configuration

Autodetect File Mime Type on Download - set the option to 'Yes' to let customers open attachments in a new browser window instead of downloading them.

Adding Files to the Product

To add new files for a specific product please go to **Catalog → Products** and open the necessary product. Then expand the **Product Attachments** tab.

	Fileld	Icon	File Name	Extension	Label	Customer Groups	Include In Order	Visible	Actions
	New File		bag-warranty_3	docx	bag-warranty_3	NOT LOGGED IN General Wholesale Retailer	No	Yes	🗑
	New File		promo-bag_2	jpg	promo-bag_2	NOT LOGGED IN General Wholesale Retailer	No	Yes	🗑

You can specify custom name for this tab by modifying the **Tab Title** option on the General Settings page.

This handy grid allows you to manage all existing attachments easily:

Icon - define a needed attachment by catchy icons to add to the product.

File Name - specify a relevant file name for your internal use.

Extension - track the attachments easily according to file extensions.

Label - fill in the label that will be displayed on the frontend as the name of the attachment.

Customer Group - specify a customer group for which the attachment will be visible on the frontend.

Include In Order - enable this option if you want to display the product attachment in the tab 'My Orders' on the frontend.

Visible - modify this option to hide or display the attachment regarding the product.

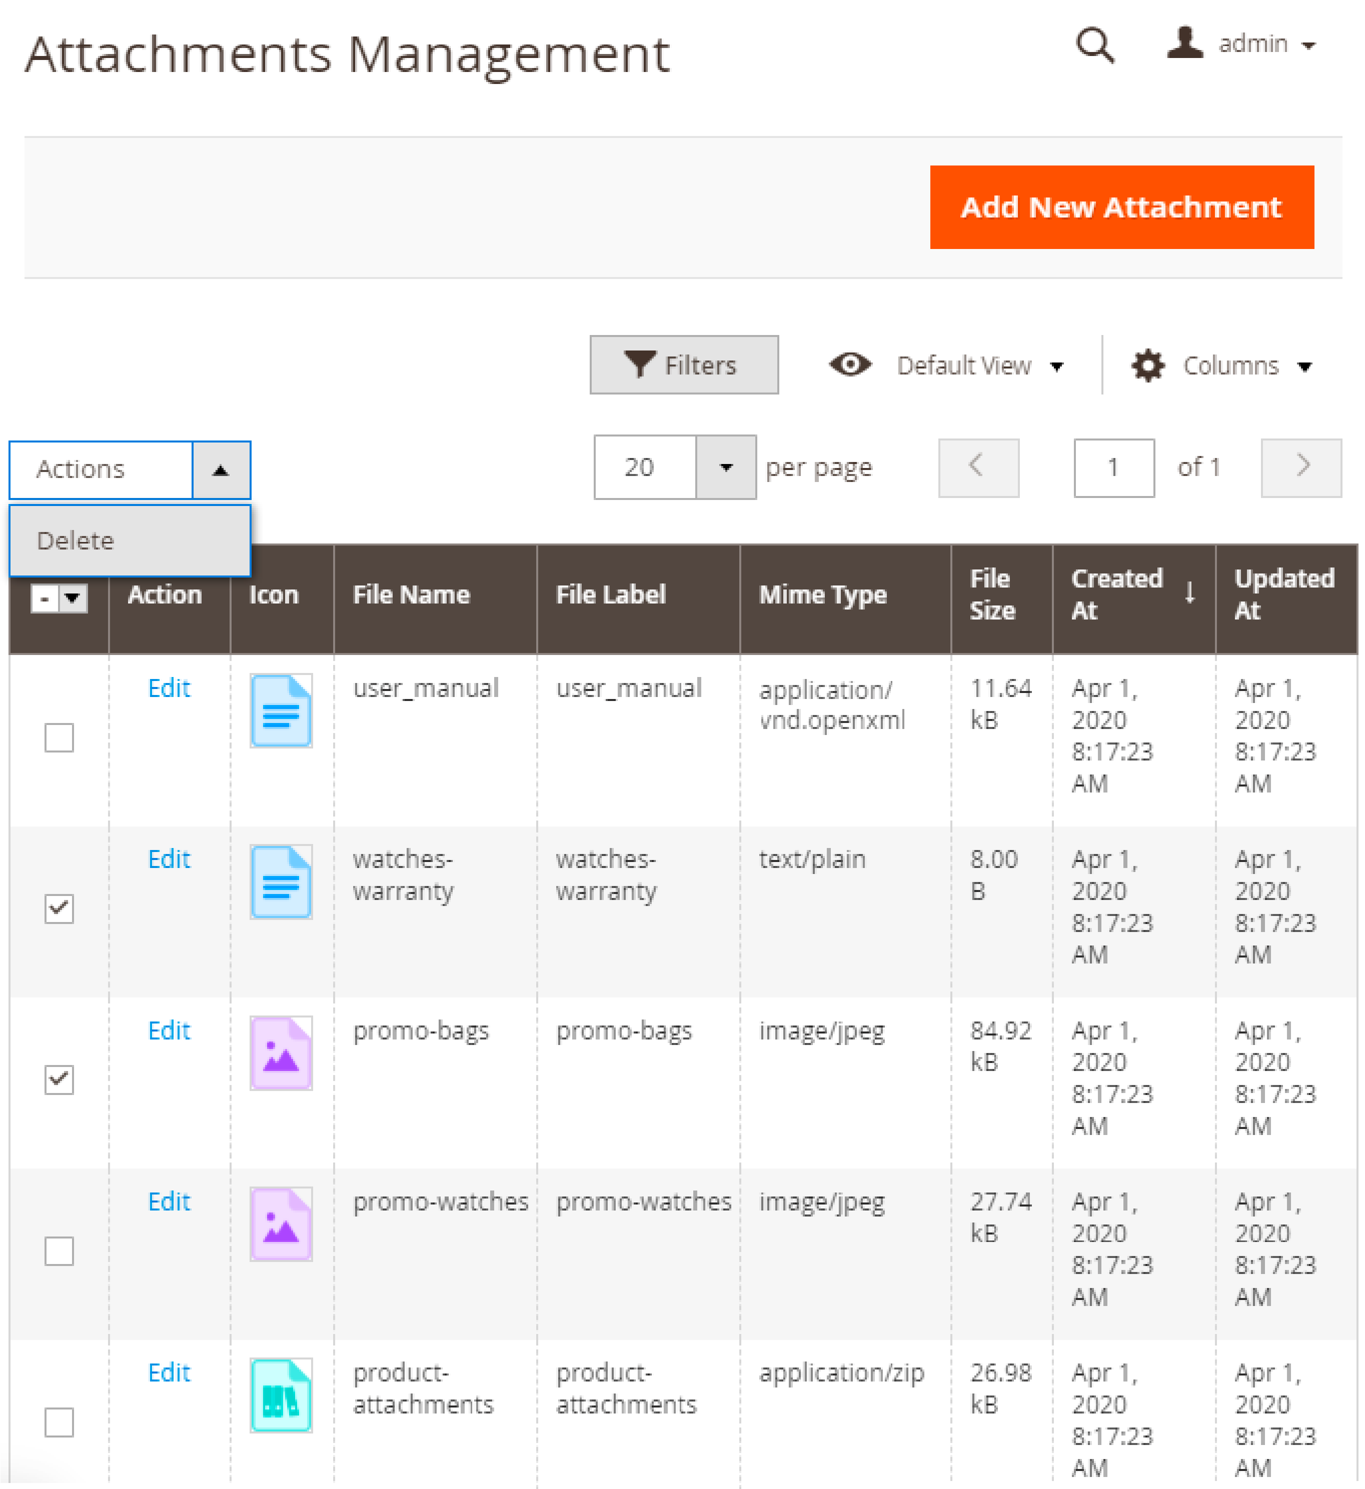
If you show two or more attachments on a product page, you can specify the order for displaying files.

You can make the following actions right from the admin panel:

Click the **Add Existing Attachments** button to add files that are already loaded. Click the **Add New Files** button to add a new attachment for the related product. Click the **Add New Links** button to provide your product page with a necessary link.

Attachments Management

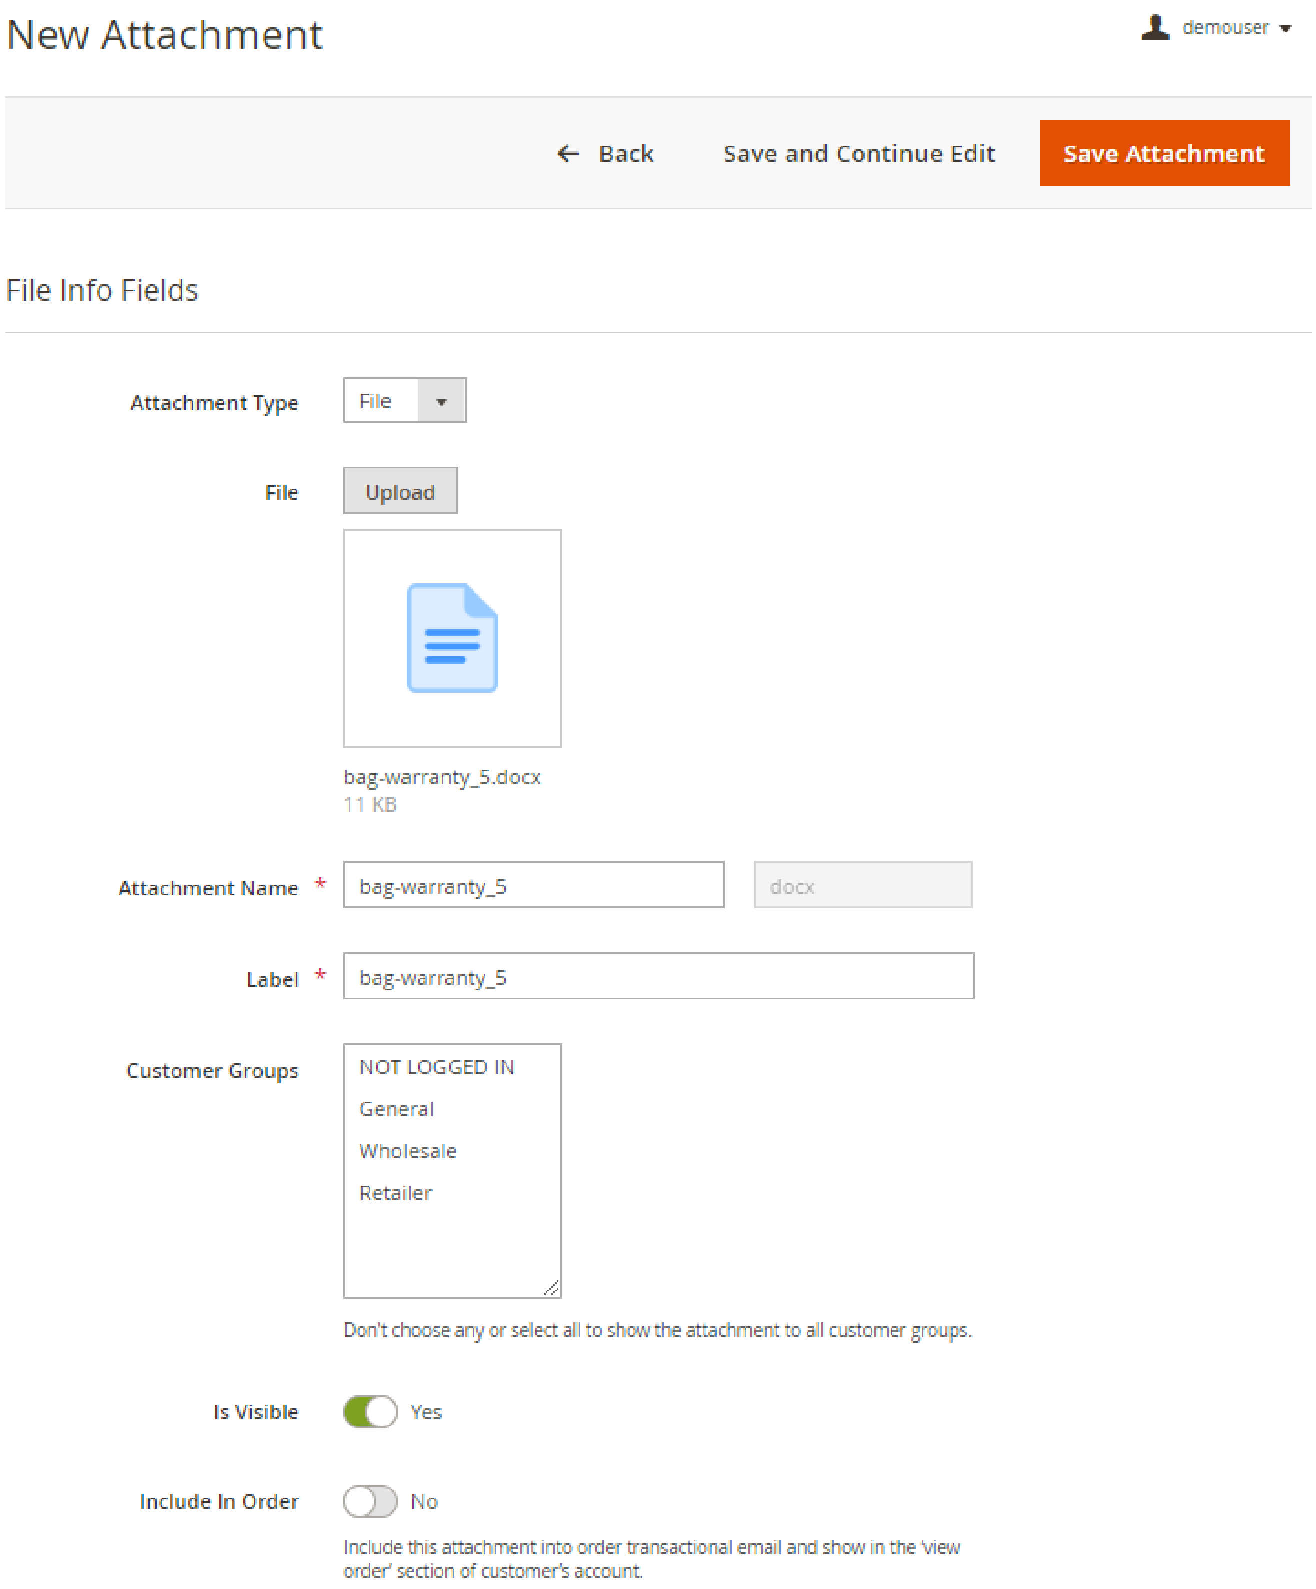
To see all the attachments please go to **Catalog → Attachments Management**.



☐	Action	Icon	File Name	File Label	Mime Type	File Size	Created At	Updated At
□	Edit		user_manual	user_manual	application/ vnd.openxml	11.64 kB	Apr 1, 2020 8:17:23 AM	Apr 1, 2020 8:17:23 AM
☑	Edit		watches-warranty	watches-warranty	text/plain	8.00 B	Apr 1, 2020 8:17:23 AM	Apr 1, 2020 8:17:23 AM
☑	Edit		promo-bags	promo-bags	image/jpeg	84.92 kB	Apr 1, 2020 8:17:23 AM	Apr 1, 2020 8:17:23 AM
□	Edit		promo-watches	promo-watches	image/jpeg	27.74 kB	Apr 1, 2020 8:17:23 AM	Apr 1, 2020 8:17:23 AM
□	Edit		product-attachments	product-attachments	application/zip	26.98 kB	Apr 1, 2020 8:17:23 AM	Apr 1, 2020 8:17:23 AM

This handy grid helps you track all existing files by ID, icon, attachment type, file name, file label, mime type, and file size. Also, store admins can track the date of file upload and monitor the date of last changes (including changes of products, categories, etc.).

You can add new files to the existing list right from the grid by clicking the **Add New Attachment** button.



New Attachment

File Info Fields

Attachment Type: File

File: Upload

bag-warranty_5.docx
11 KB

Attachment Name *: bag-warranty_5 docx

Label *: bag-warranty_5

Customer Groups: NOT LOGGED IN, General, Wholesale, Retailer

Don't choose any or select all to show the attachment to all customer groups.

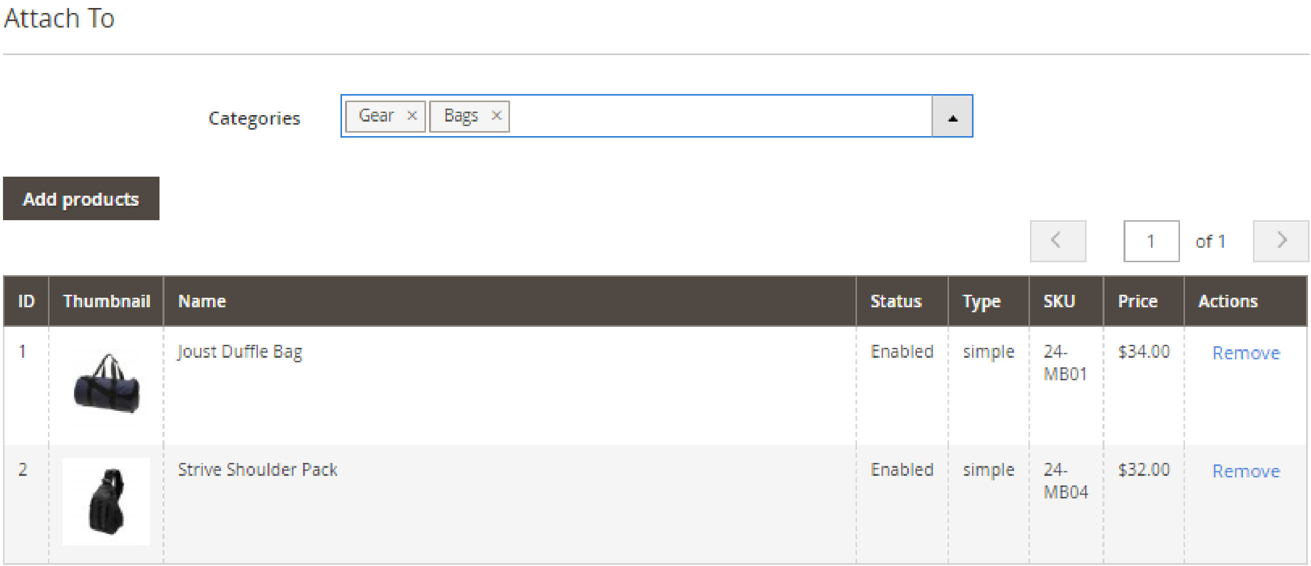
Is Visible: Yes

Include In Order: No

Include this attachment into order transactional email and show in the 'view order' section of customer's account.

Specify the **Attachment Type** and fill in the **Attachment Name**, **Label** and then choose a **Customer group** to which display the file. Then press the **Upload** button to select a necessary file.

In one click you can regulate the file visibility and include it in order.



Attach To

Categories: Gear × Bags ×

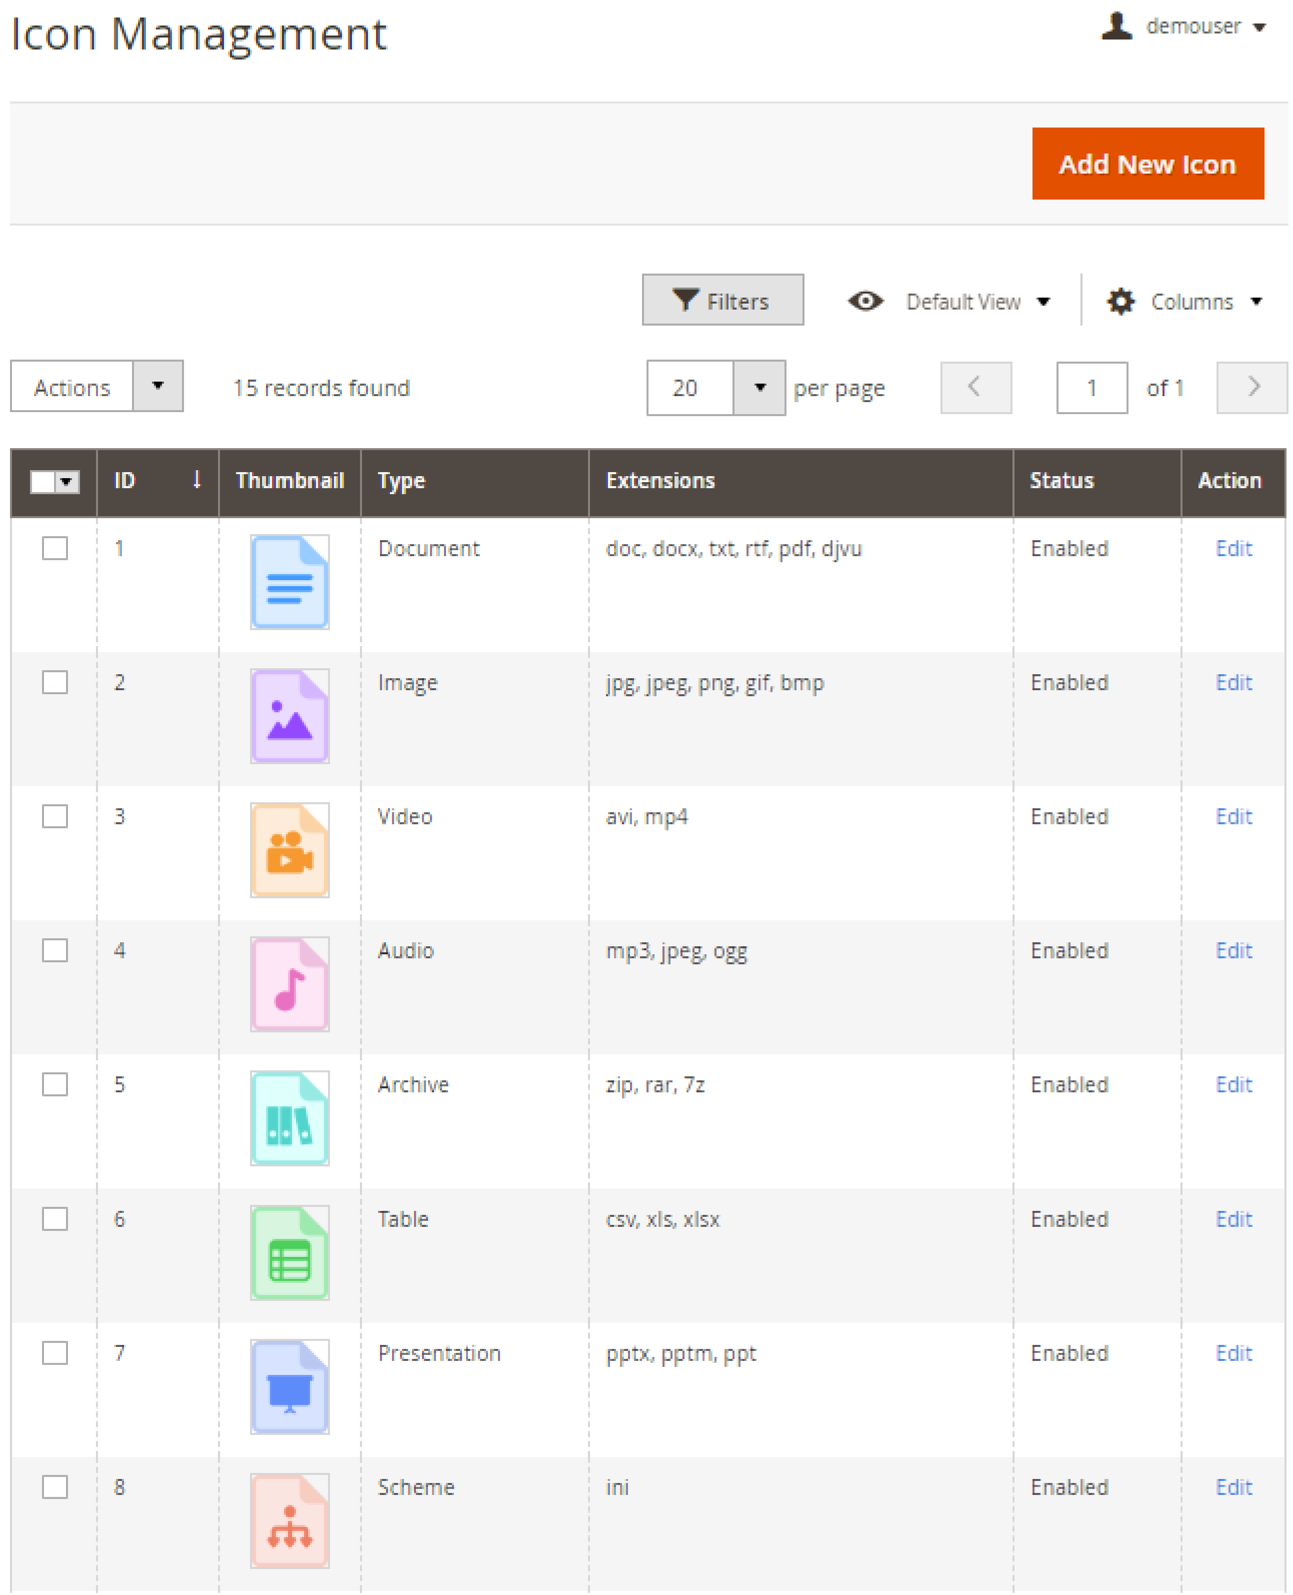
ID	Thumbnail	Name	Status	Type	SKU	Price	Actions
1		Joust Duffle Bag	Enabled	simple	24-MB01	$34.00	Remove
2		Strive Shoulder Pack	Enabled	simple	24-MB04	$32.00	Remove

Also you can attach a new file to any category and product you need. Just select necessary categories and add products to attach a new file to them.

Then press the **Save Attachment** button to finish the new attachment adding.

Adding an Icon

Make attachments more noticeable for customers with catchy icons. To create a new attachment icon or edit already existing ones go to **Catalog → Icon Management**.

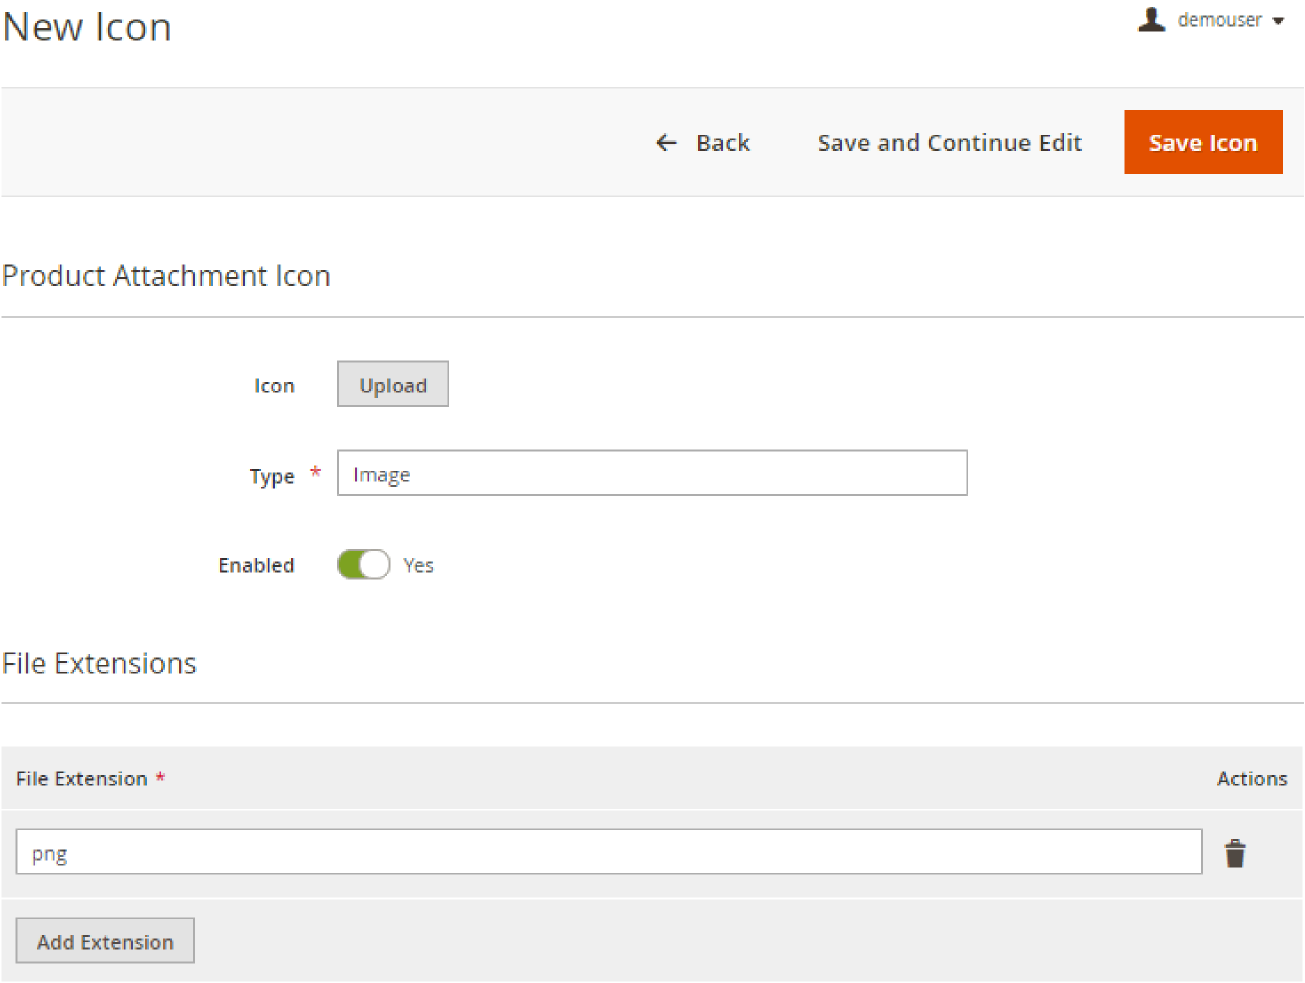


Icon Management

☐	ID	Thumbnail	Type	Extensions	Status	Action
☐	1		Document	doc, docx, txt, rtf, pdf, djvu	Enabled	Edit
☐	2		Image	jpg, jpeg, png, gif, bmp	Enabled	Edit
☐	3		Video	avi, mp4	Enabled	Edit
☐	4		Audio	mp3, jpeg, ogg	Enabled	Edit
☐	5		Archive	zip, rar, 7z	Enabled	Edit
☐	6		Table	csv, xls, xlsx	Enabled	Edit
☐	7		Presentation	pptx, pptm, ppt	Enabled	Edit
☐	8		Scheme	ini	Enabled	Edit

This handy grid allows you to track all existing files by thumbnail, icon type and extension. You can easily check the icon status in the same place.

The module let you add a new icon right from the admin panel by pressing the **Add New Icon** button.



New Icon

Product Attachment Icon

Icon

Type * Image

Enabled Yes

File Extensions

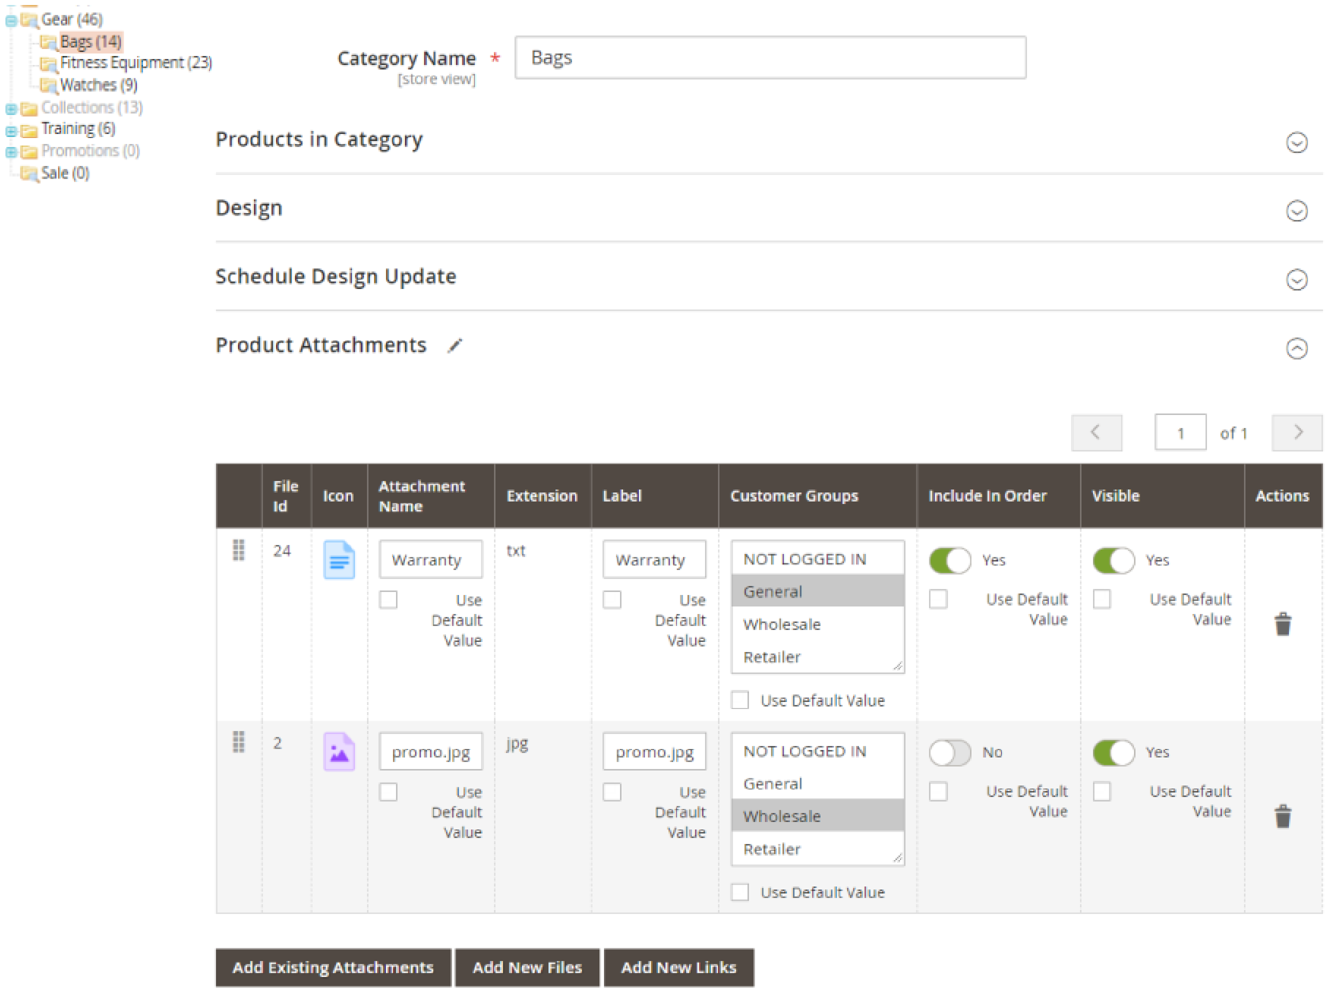
File Extension *	Actions
png	🗑

Upload the icon you need, specify the file type for which the icon will be used. You can enable the icon displaying in one click. Then add the file extension by pressing the **Add Extension** button.

Hit the **Save Icon** button to finish the new icon adding.

Adding Files to the Product Category

To attach files to any product category, please, go to **Catalog → Categories** and select any product category to which you want to add files.



Gear (46)
Bags (14)
Fitness Equipment (23)
Watches (9)
Collections (13)
Training (6)

1 of 1

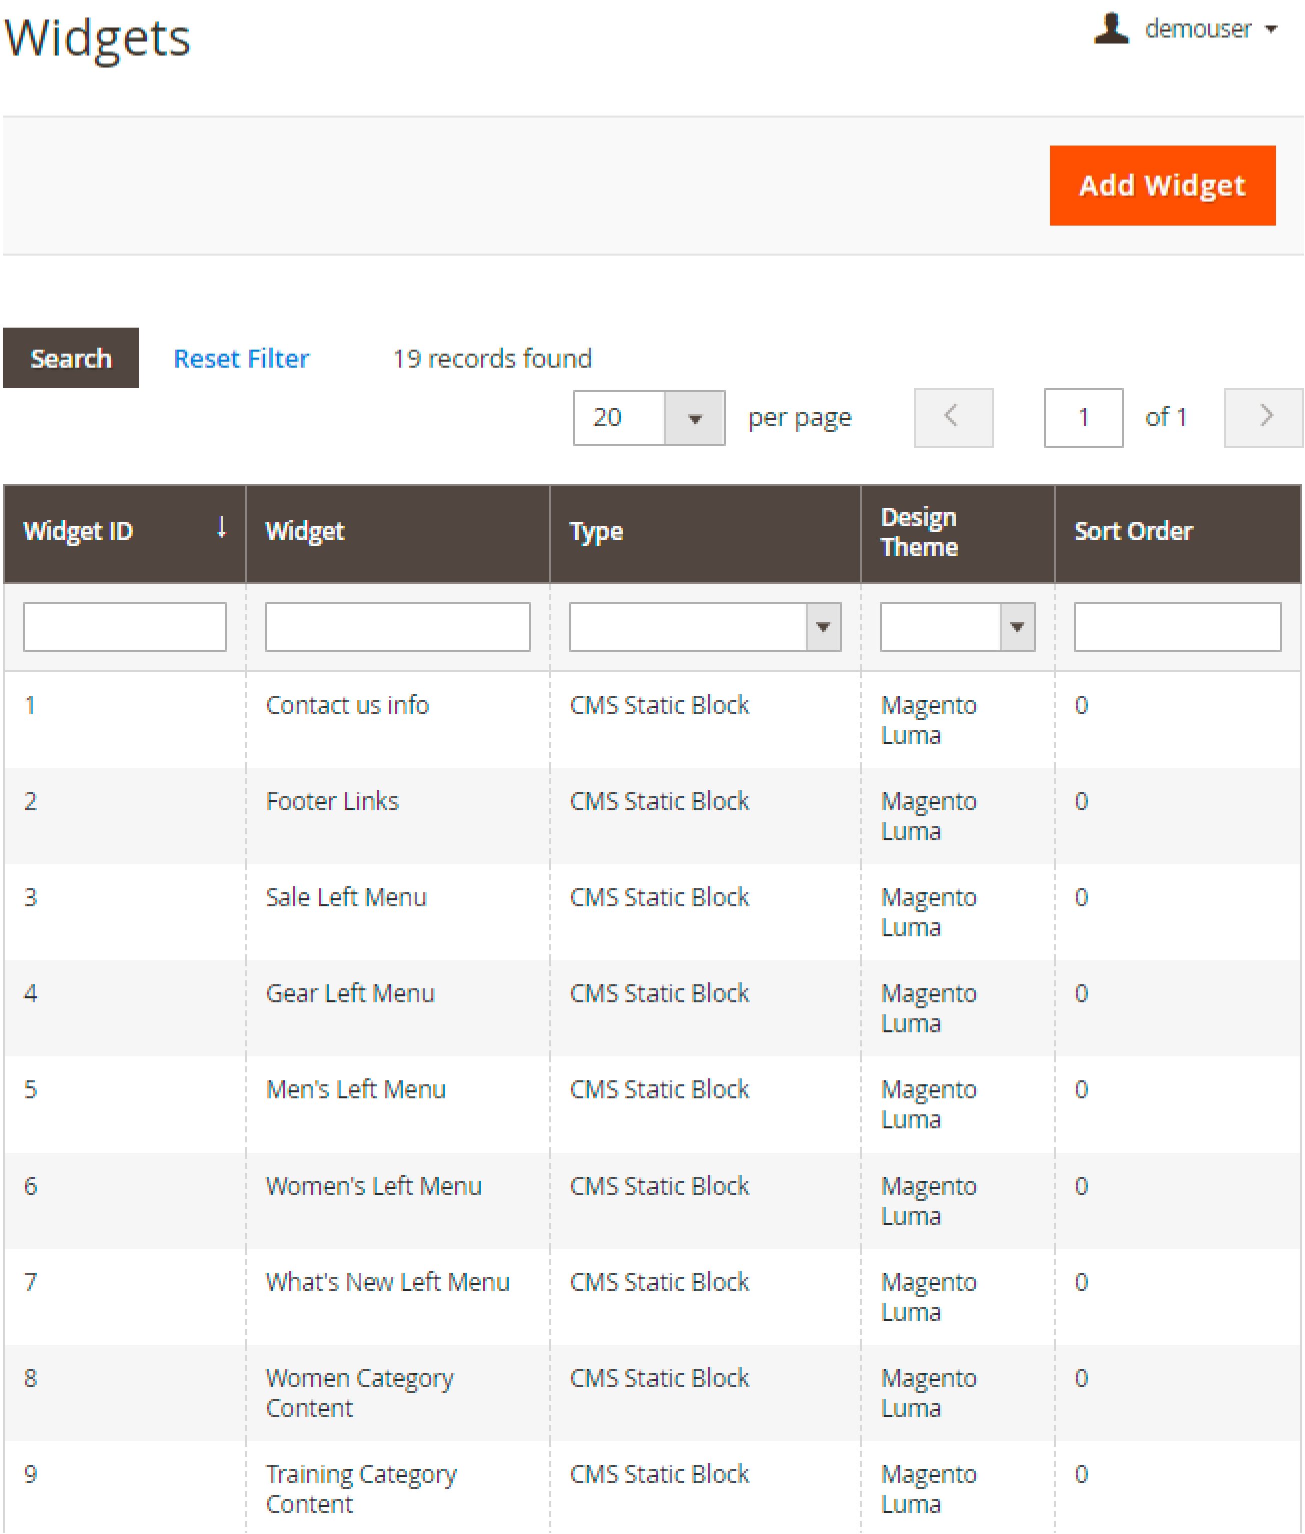
	File Id	Icon	Attachment Name	Extension	Label	Customer Groups	Include In Order	Visible	Actions
	24		Warranty ☐ Use Default Value	txt	Warranty ☐ Use Default Value	NOT LOGGED IN General Wholesale Retailer ☐ Use Default Value	Yes ☐ Use Default Value	Yes ☐ Use Default Value	
	2		promo.jpg ☐ Use Default Value	jpg	promo.jpg ☐ Use Default Value	NOT LOGGED IN General Wholesale Retailer ☐ Use Default Value	No ☐ Use Default Value	Yes ☐ Use Default Value	

Then, expand the **Product Attachments** tab. You can add existing or new files or even add new links to the chosen product category. Then press the **Save** button to attach added files to the certain product category.

Managing Attachments Block via Widget

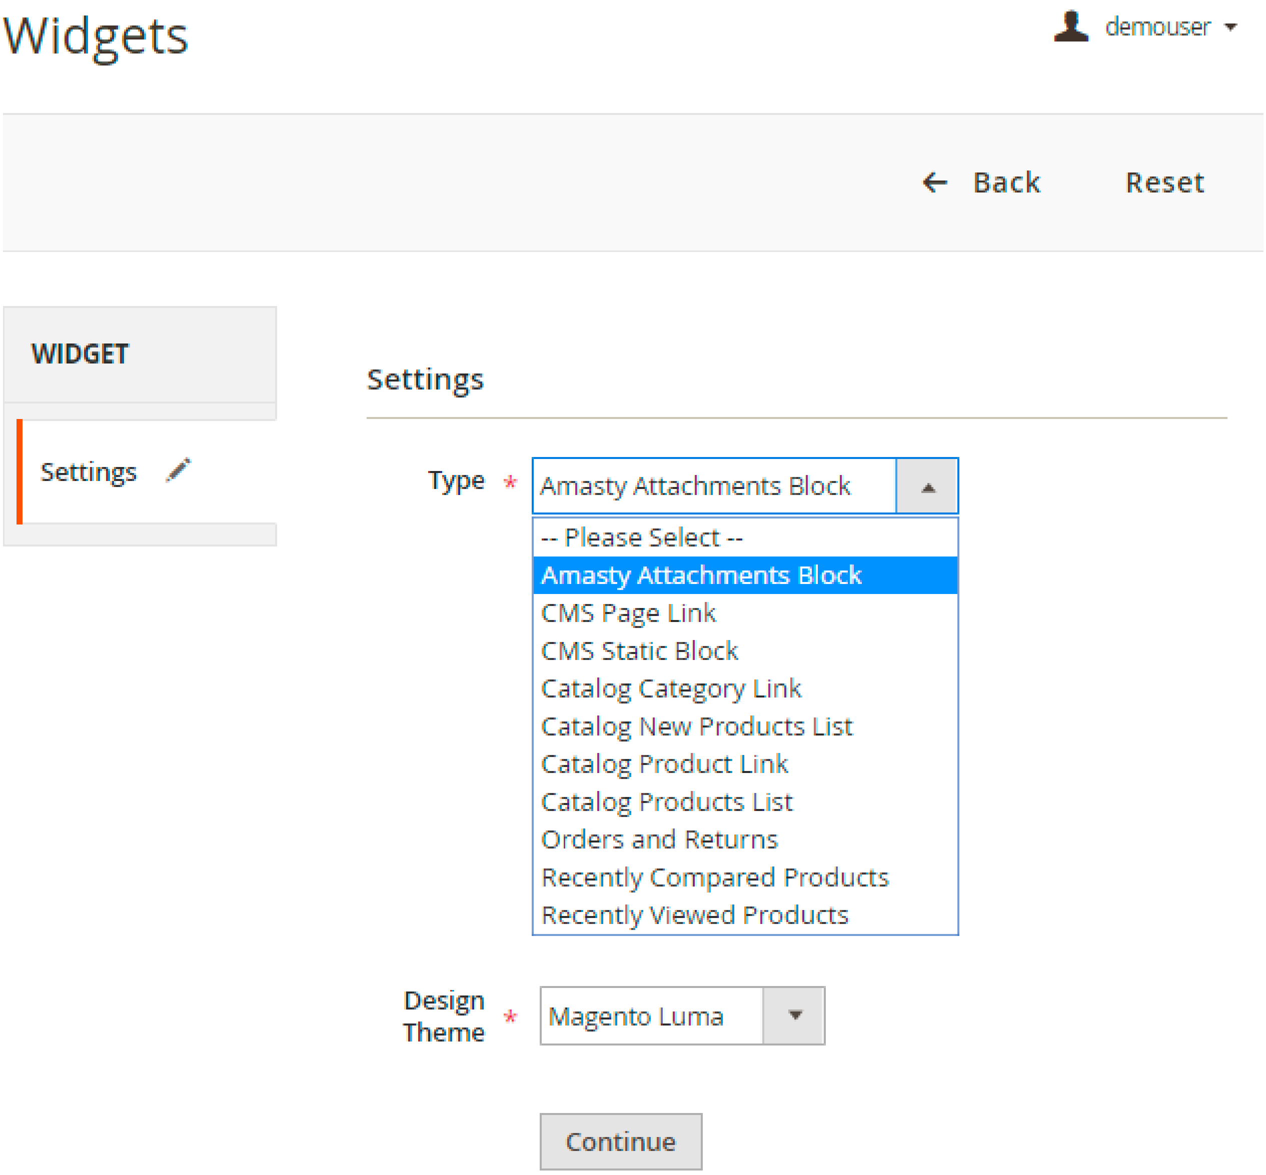
With the extension it is possible to add Product Attachments Block to any page or position via widget.

To configure the widget, go to **Content → Elements → Widgets**.



Widget ID	Widget	Type	Design Theme	Sort Order
1	Contact us info	CMS Static Block	Magento Luma	0
2	Footer Links	CMS Static Block	Magento Luma	0
3	Sale Left Menu	CMS Static Block	Magento Luma	0
4	Gear Left Menu	CMS Static Block	Magento Luma	0
5	Men's Left Menu	CMS Static Block	Magento Luma	0
6	Women's Left Menu	CMS Static Block	Magento Luma	0
7	What's New Left Menu	CMS Static Block	Magento Luma	0
8	Women Category Content	CMS Static Block	Magento Luma	0
9	Training Category Content	CMS Static Block	Magento Luma	0

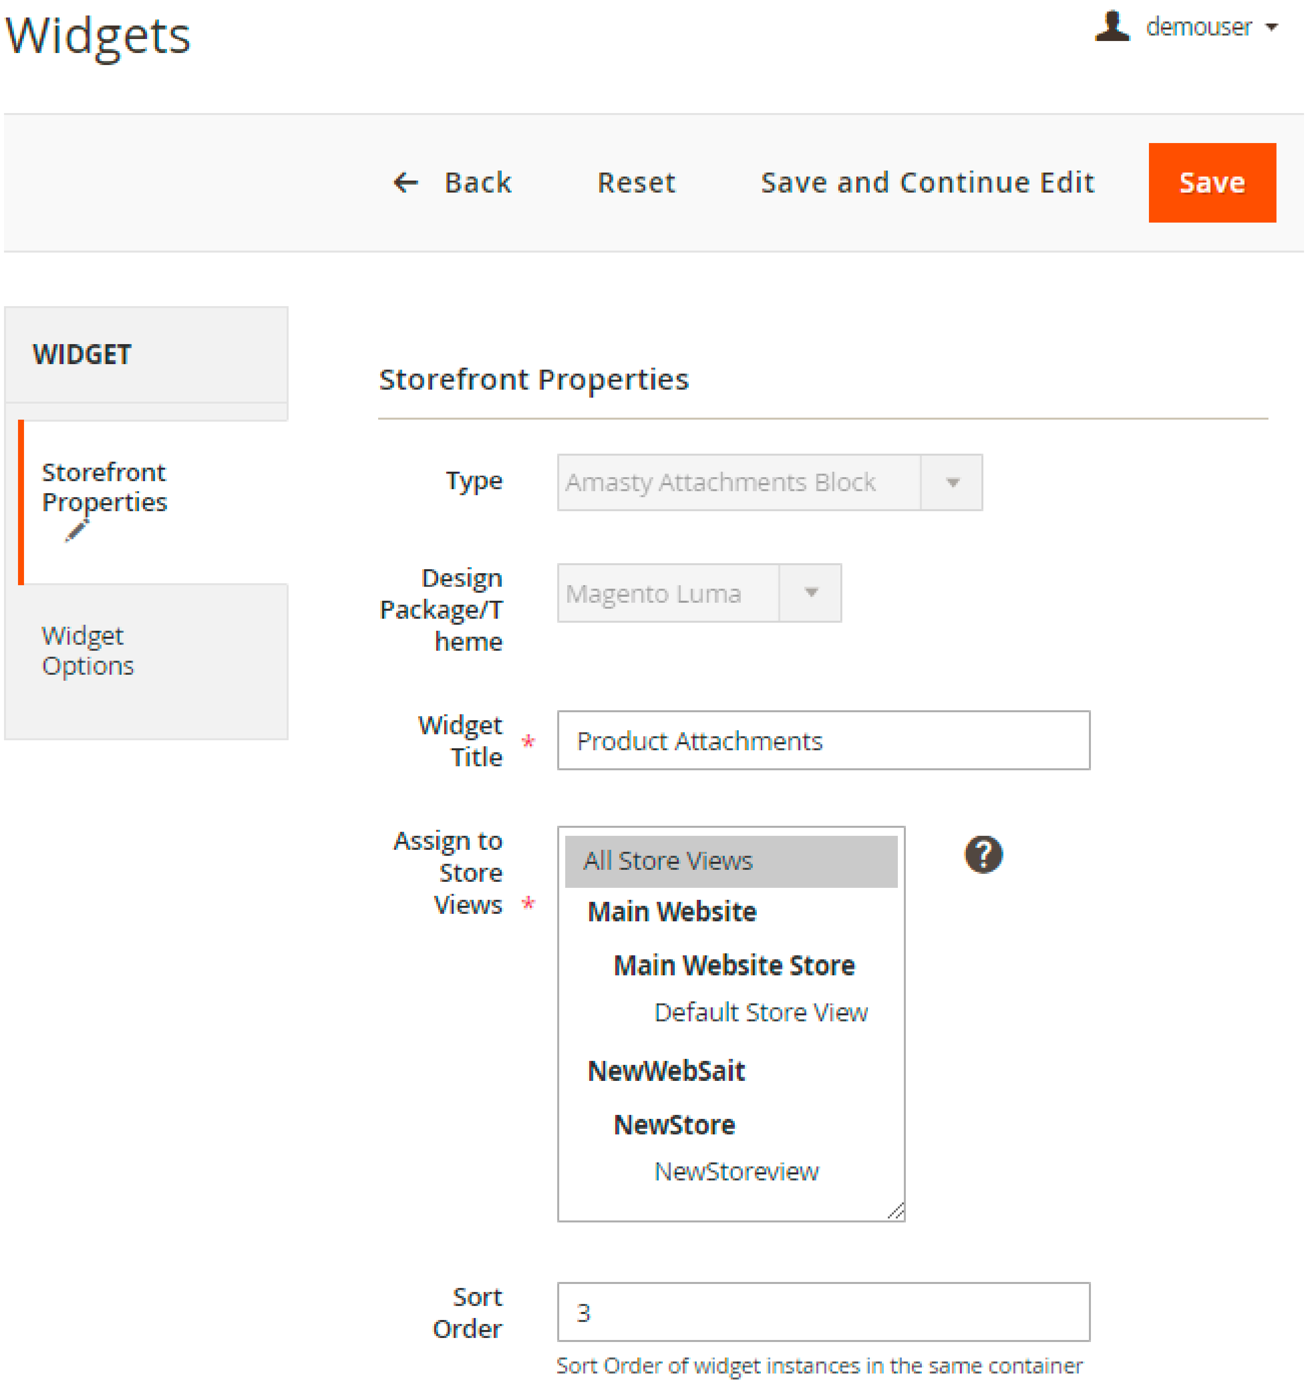
Click the **Add Widget** button.



Type - select the **Amasty Attachments Block** widget type.

Choose the theme and click **Continue**.

Set the **Storefront Properties** of the block.



Widgets

Storefront Properties

Type: Amasty Attachments Block

Design Package/Theme: Magento Luma

Widget Title *: Product Attachments

Show Icon: Yes

Show File Size: Yes

Block Title - specify the title that will be displayed on the frontend.

Widget Type - choose the type of the widget.

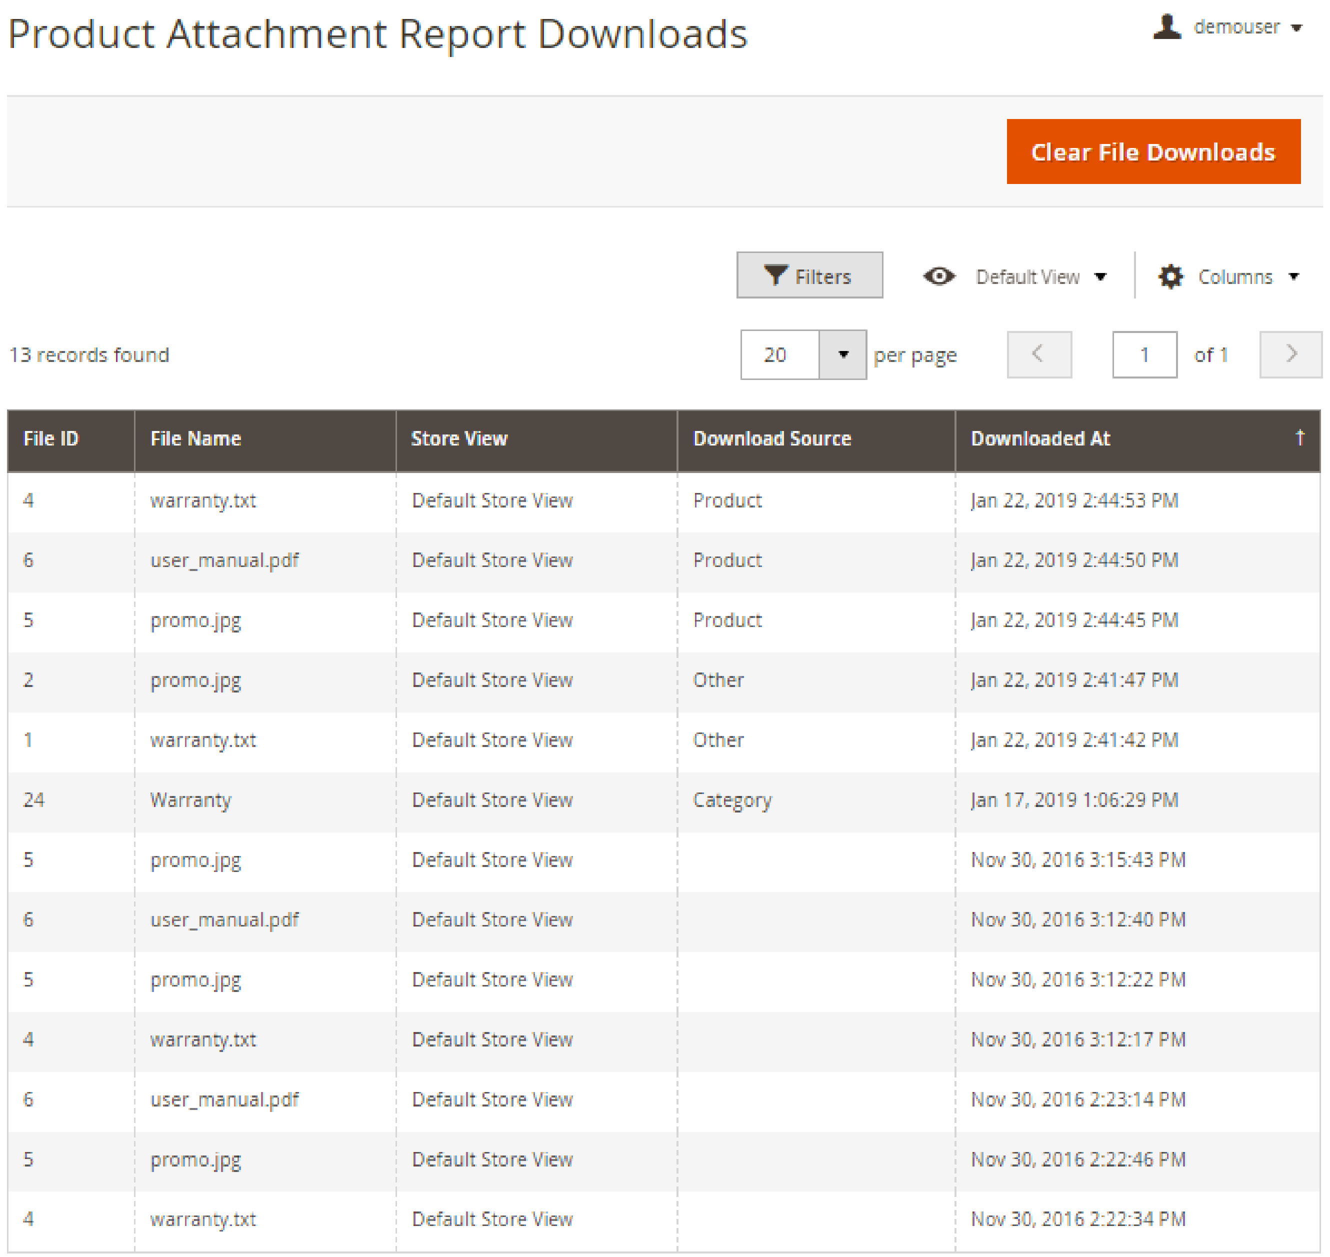
You can also **Show Icon** and **Show File Size** or hide them if necessary.

Hit the **Save** button.

Download Reports

Due to the advanced Magento 2 file attachment manager tool you can view and analyze detailed reports on file downloads. Here you can see statistics on what attachments were downloaded, when this happened and who downloaded the file.

To see reports on file downloads please go to **Reports → Downloads**.



Product Attachment Report Downloads

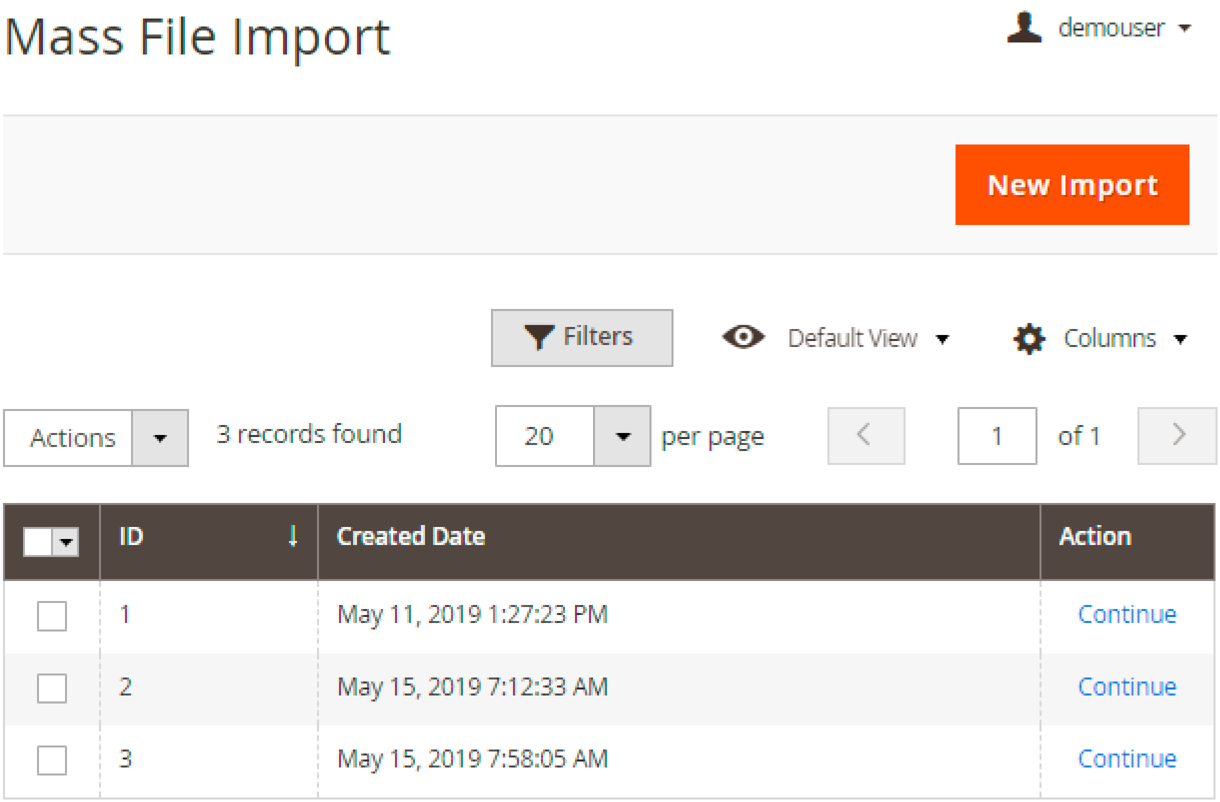
Grand Total	**$63.46**

The extension allows you to place attachments in absolutely any location on product, category and CMS pages via widgets.

Attachments mass-import

With the extension you can import attachments in bulk and assign them to products via CSV-file import.

Go to **Catalog**, choose **Mass File Import** in **Product Attachments** tab.



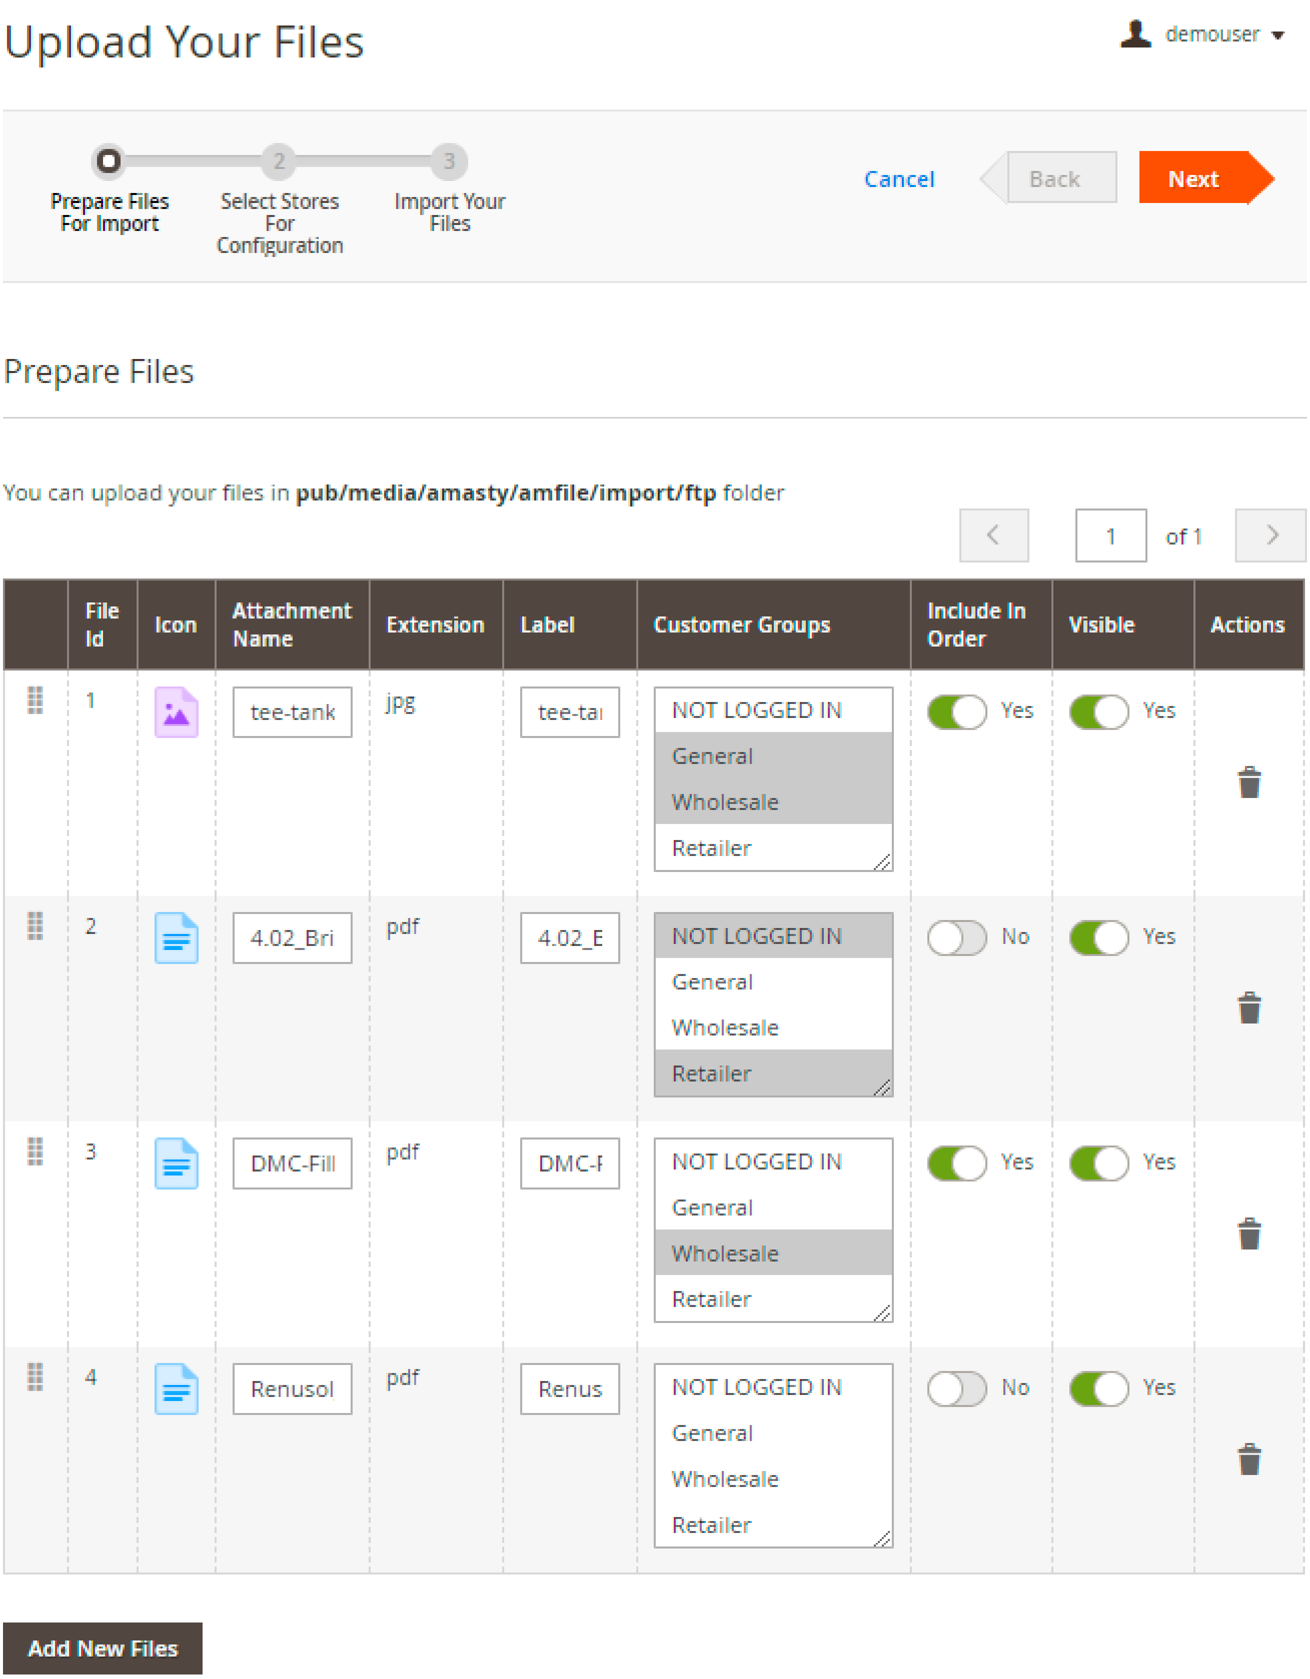
□	ID	Created Date	Action
□	1	May 11, 2019 1:27:23 PM	Continue
□	2	May 15, 2019 7:12:33 AM	Continue
□	3	May 15, 2019 7:58:05 AM	Continue

All incomplete imports are saved and displayed in the grid. To complete any of them, press the **Continue** button. To start a new import process, click **New Import**.

Step 1. Prepare files for import

In this tab upload all the attachments you want to import via **Add New File** button.

You can also upload your files in **pub/media/amasty/amfile/import/ftp** folder.



Upload Your Files

demouser

Prepare Files

You can upload your files in **pub/media/amasty/amfile/import/ftp** folder

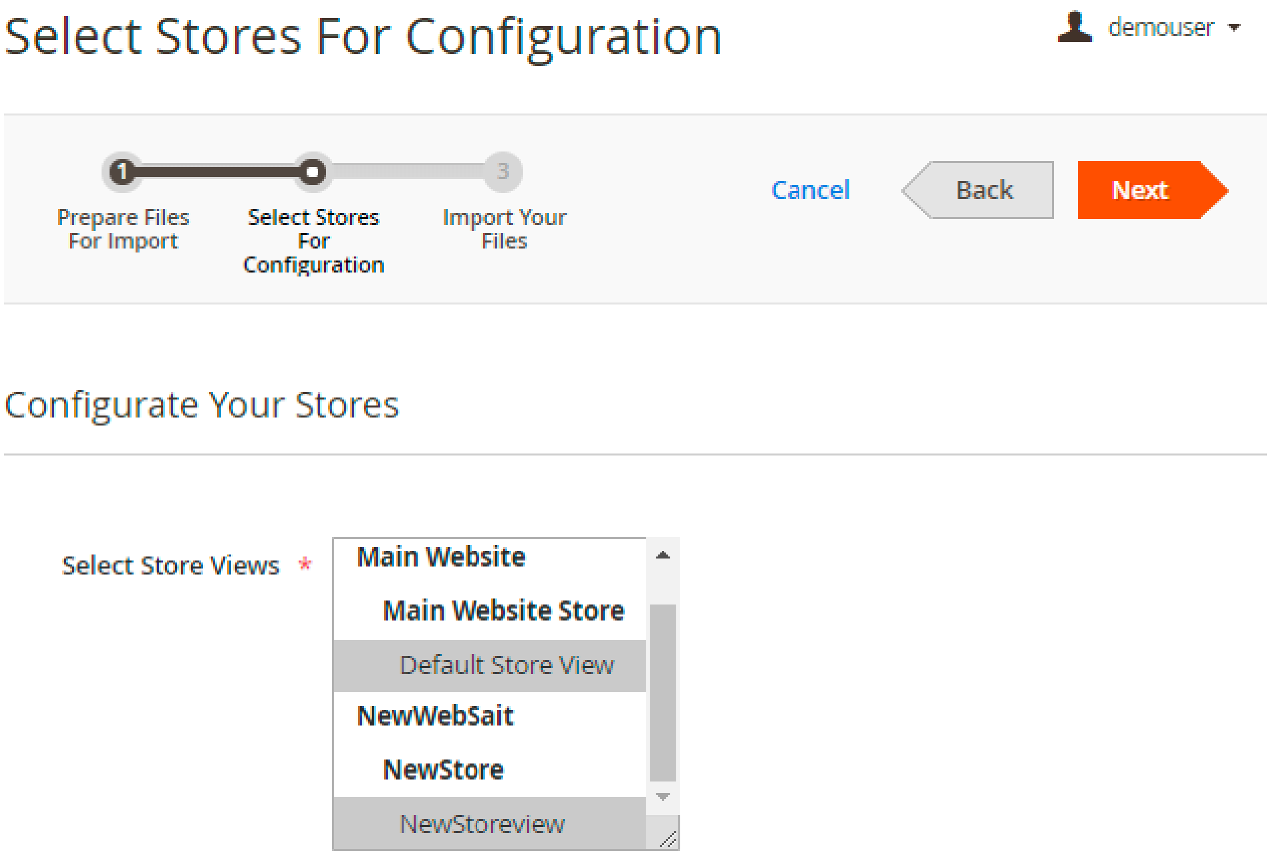
	File Id	Icon	Attachment Name	Extension	Label	Customer Groups	Include In Order	Visible	Actions
	1		tee-tank	jpg	tee-tai	NOT LOGGED IN General Wholesale Retailer	Yes	Yes	
	2		4.02_Bri	pdf	4.02_E	NOT LOGGED IN General Wholesale Retailer	No	Yes	
	3		DMC-Fill	pdf	DMC-F	NOT LOGGED IN General Wholesale Retailer	Yes	Yes	
	4		Renusol	pdf	Renus	NOT LOGGED IN General Wholesale Retailer	No	Yes	

You can change files' names and labels if needed, assign them to the necessary customer groups, include in order and make them visible/invisible right in the grid.

Click **Next**.

Step 2. Select Stores For Configuration

Here specify store views to which you want to import files.



Select Stores For Configuration

Configurate Your Stores

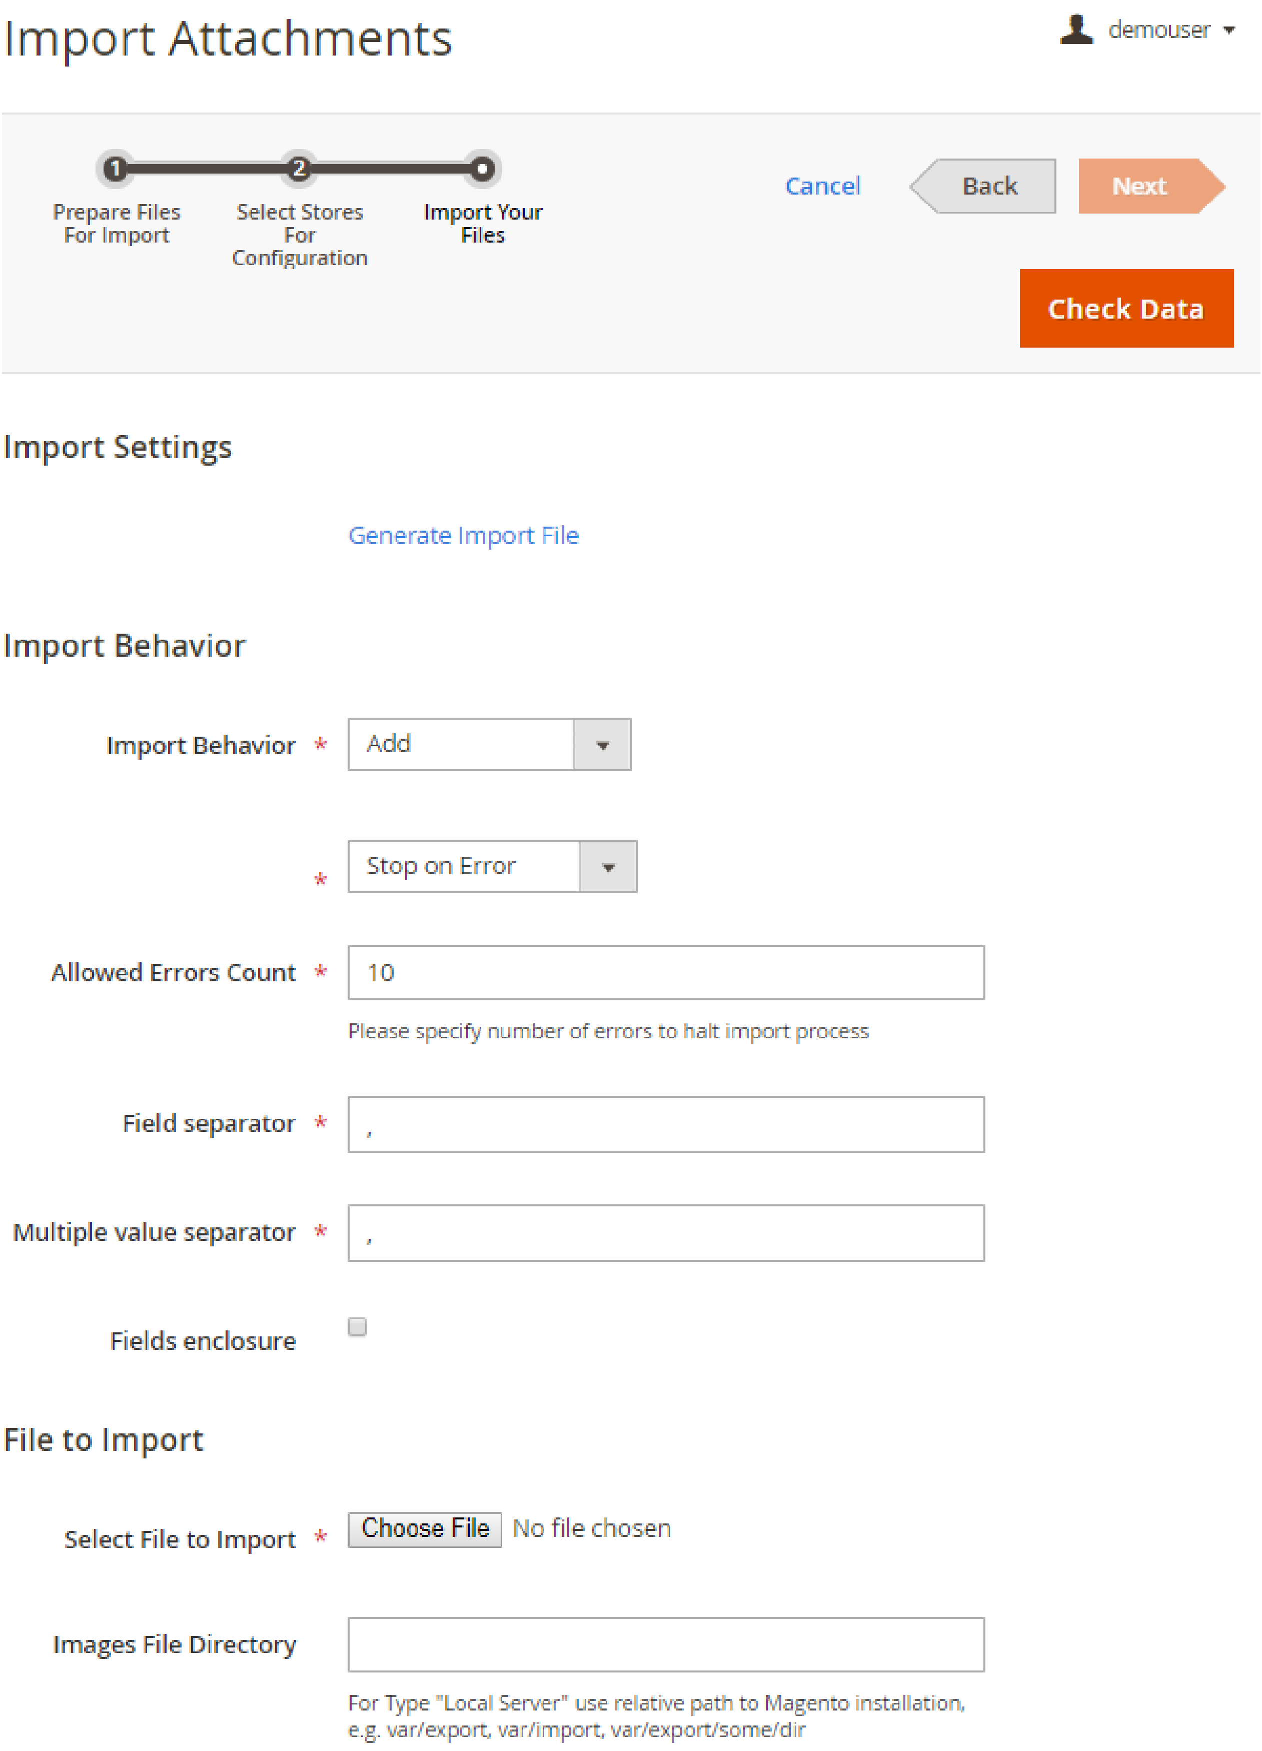
Select Store Views *

- Main Website
  - Main Website Store
    - Default Store View
- NewWebSait
  - NewStore
    - NewStoreview

Press **Next**.

Step 3. Import Your Files

In this tab CSV-file is generated.



Import Attachments

Import Settings

Generate Import File

Import Behavior

Import Behavior * Add

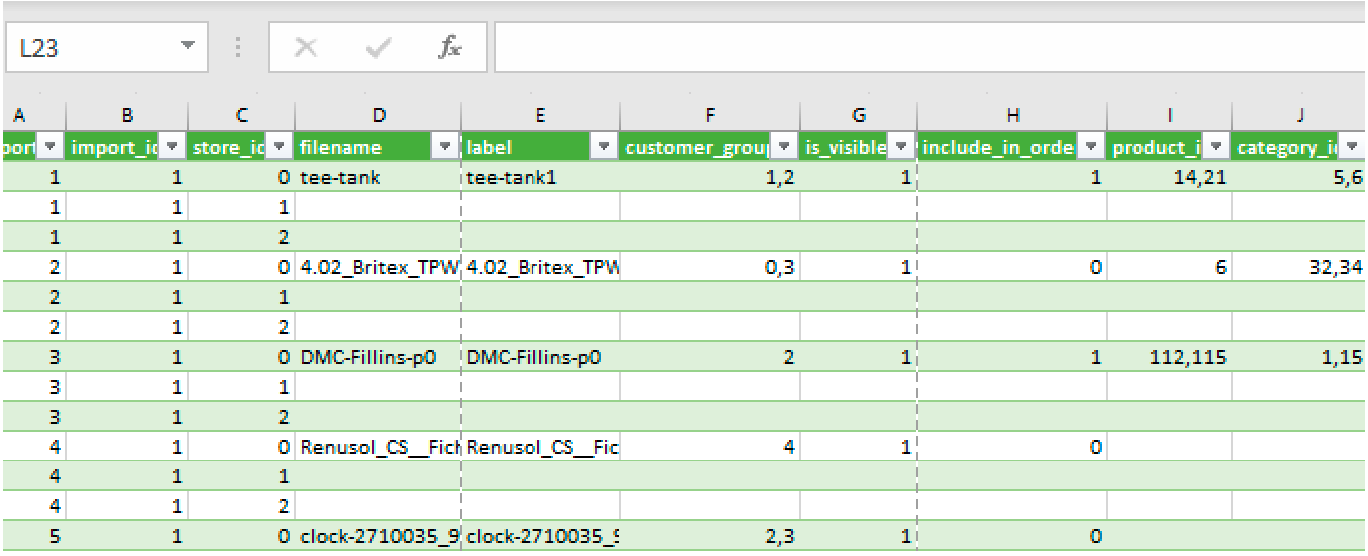
Select File to Import * Choose File No file chosen

Images File Directory

For Type "Local Server" use relative path to Magento installation, e.g. var/export, var/import, var/export/some/dir

Press **Generate import file** to download an import sample file.

In the sample you can edit any data presented in Step 1.

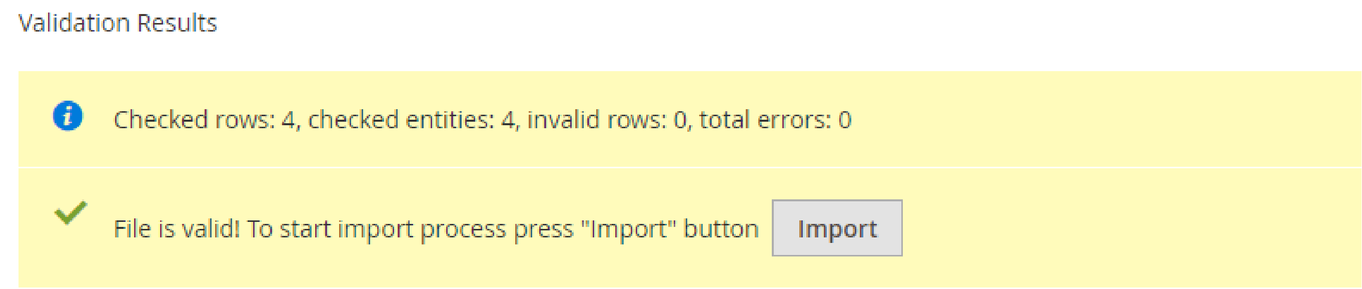


A	B	C	D	E	F	G	H	I	J
port	import_ic	store_ic	filename	label	customer_grou	is_visible	include_in_orde	product_i	category_i
1	1	0	tee-tank	tee-tank1	1,2	1	1	14,21	5,6
1	1	1							
1	1	2							
2	1	0	4.02_Britex_TPW	4.02_Britex_TPW	0,3	1	0	6	32,34
2	1	1							
2	1	2							
3	1	0	DMC-Fillins-p0	DMC-Fillins-p0	2	1	1	112,115	1,15
3	1	1							
3	1	2							
4	1	0	Renusol_CS__Fich	Renusol_CS__Fic	4	1	0		
4	1	1							
4	1	2							
5	1	0	clock-2710035_9	clock-2710035_	2,3	1	0		

In our case we've selected 2 store views.For example, we have English store view (store_id - **1**) and French (store_id - **2**). So we can name the same file differently and assign to different categories, customer groups, etc.

Set **Add** in 'Import Behaviour' tab.

Press the **'Import'** button to import stock data.



Validation Results

Checked rows: 4, checked entities: 4, invalid rows: 0, total errors: 0

File is valid! To start import process press "Import" button

It is possible to go back to any of the steps, make changes and regenerate import file if needed. All changes are saved automatically, and even if the import was not completed, it will be displayed in the **Mass Import Grid** so that you could continue importing later.

Testing API with Postman

You can track and manage all the files of the Product Attachments extension with an API development environment - **Postman**. A handy HTTP client allows to create all necessary queries, put them into collections, and test apps automatically.

To download a ready-made collection for automated API testing click here:

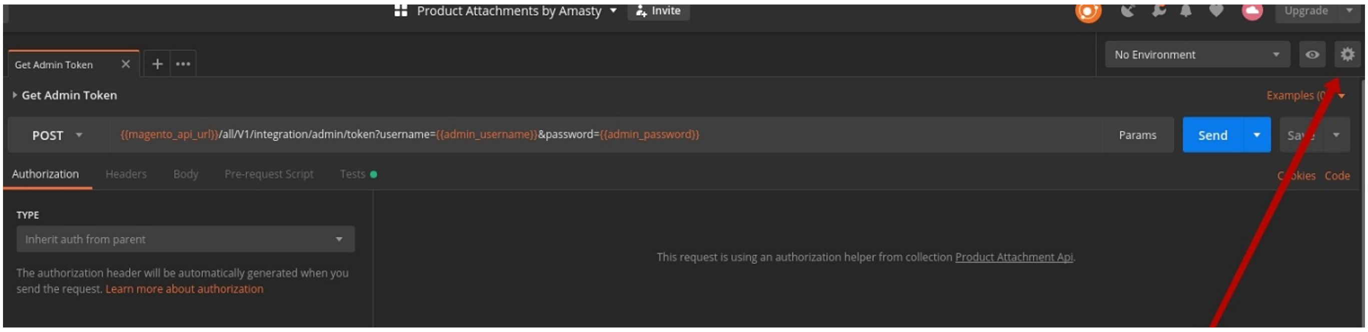
collection.zip

API support can be enabled only after purchasing an API Add-On to Product Attachments extension.

Setting up the Environment

The environment is set up in 3 steps:

1. Open **Manage environments** form:



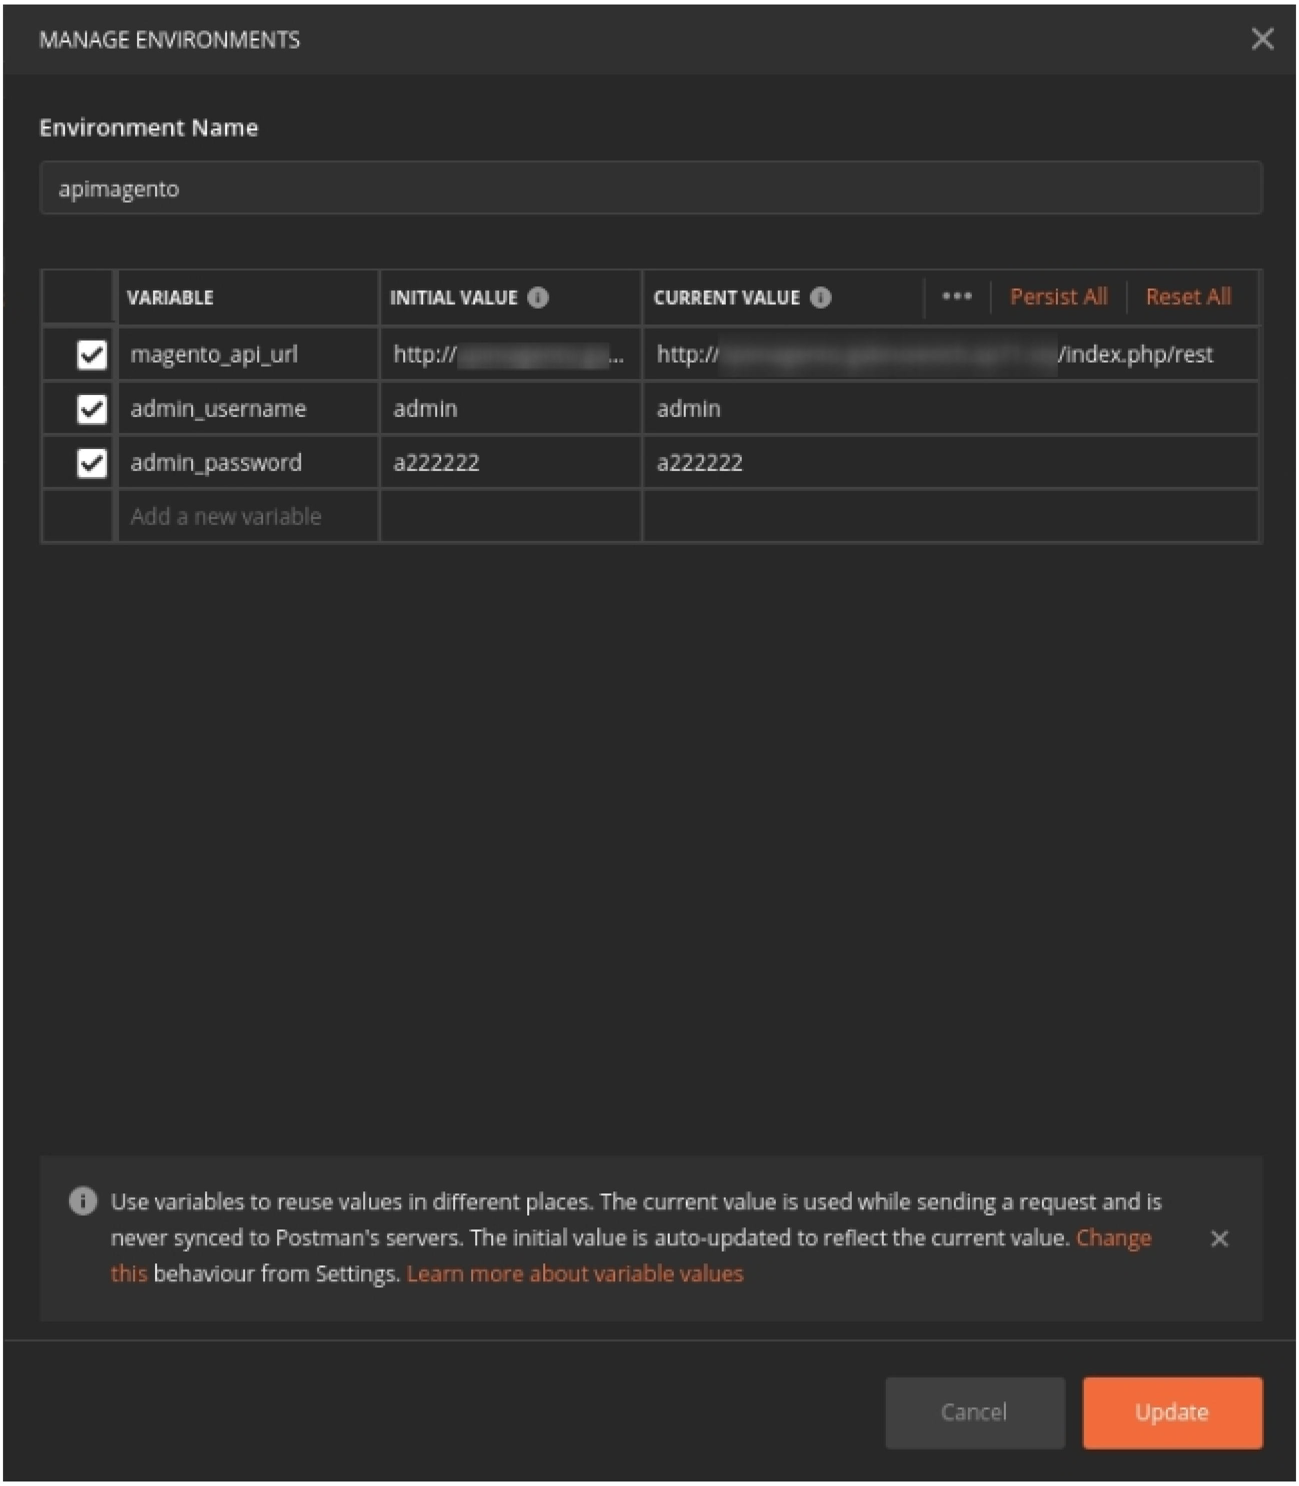
{{magento_api_url}}/all/V1/integration/admin/token?username={{admin_username}}&password={{admin_password}}

The authorization header will be automatically generated when you send the request. Learn more about authorization

This request is using an authorization helper from collection Product Attachment Api.

2. Set the following variables:

- **magento_api_url**: https://magentourl/index.php/rest
- **admin_username**: your admin username
- **admin_password**: your admin password



MANAGE ENVIRONMENTS

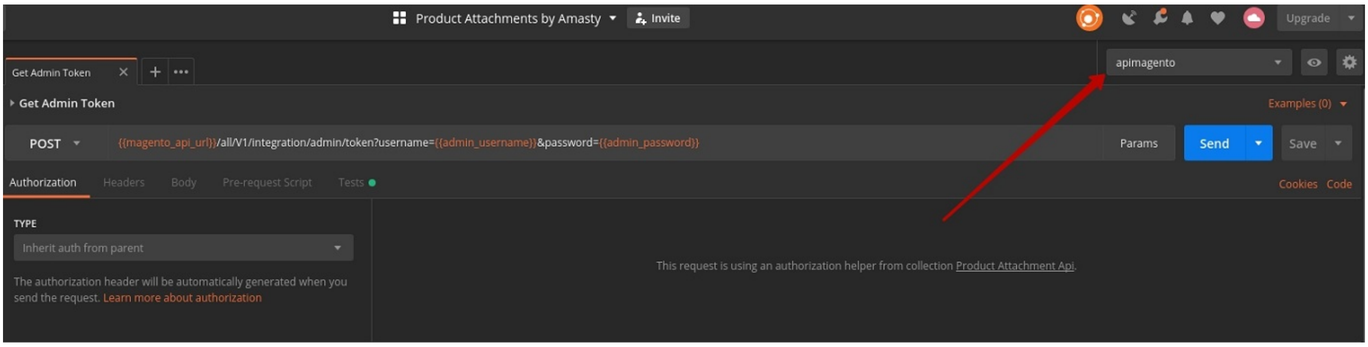
Environment Name

apimagento

	VARIABLE	INITIAL VALUE	CURRENT VALUE
☑	magento_api_url	http://[redacted]...	http://[redacted]/index.php/rest
☑	admin_username	admin	admin
☑	admin_password	a222222	a222222
	Add a new variable		

Use variables to reuse values in different places. The current value is used while sending a request and is never synced to Postman's servers. The initial value is auto-updated to reflect the current value. Change this behaviour from Settings. Learn more about variable values

3. Select the created environment:



Get Admin Token

POST {{magento_api_url}}/all/V1/integration/admin/token?username={{admin_username}}&password={{admin_password}}

TYPE

Inherit auth from parent

The authorization header will be automatically generated when you send the request. Learn more about authorization

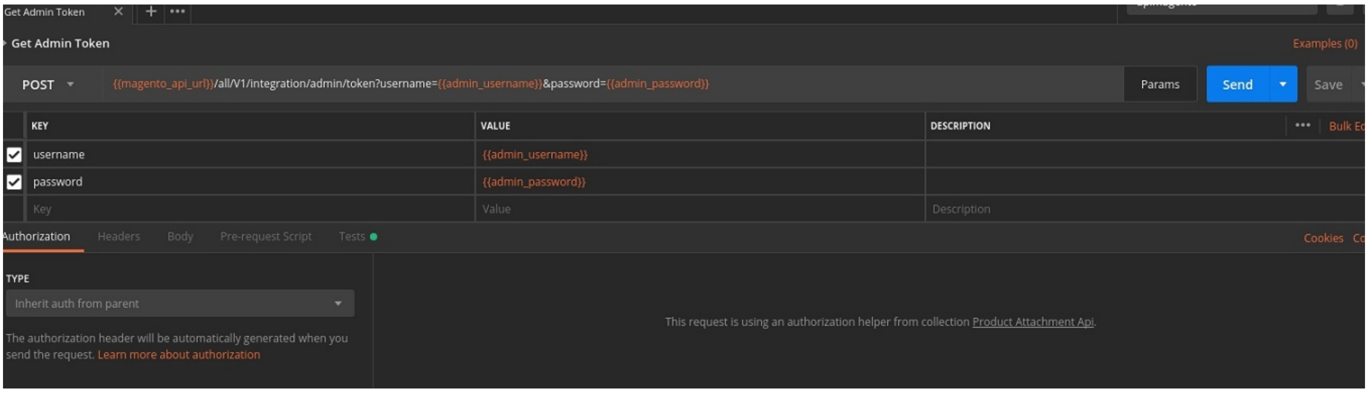
This request is using an authorization helper from collection Product Attachment Api.

The specified variables can be used in further queries.

Backend API Testing: Getting Admin Token

To work with API, you need to authorize and get **admin token**.

Start a **POST** request.



Get Admin Token

POST {{magento_api_url}}/all/V1/integration/admin/token?username={{admin_username}}&password={{admin_password}}

	KEY	VALUE	DESCRIPTION
☑	username	{{admin_username}}	
☑	password	{{admin_password}}	
	Key	Value	Description

TYPE

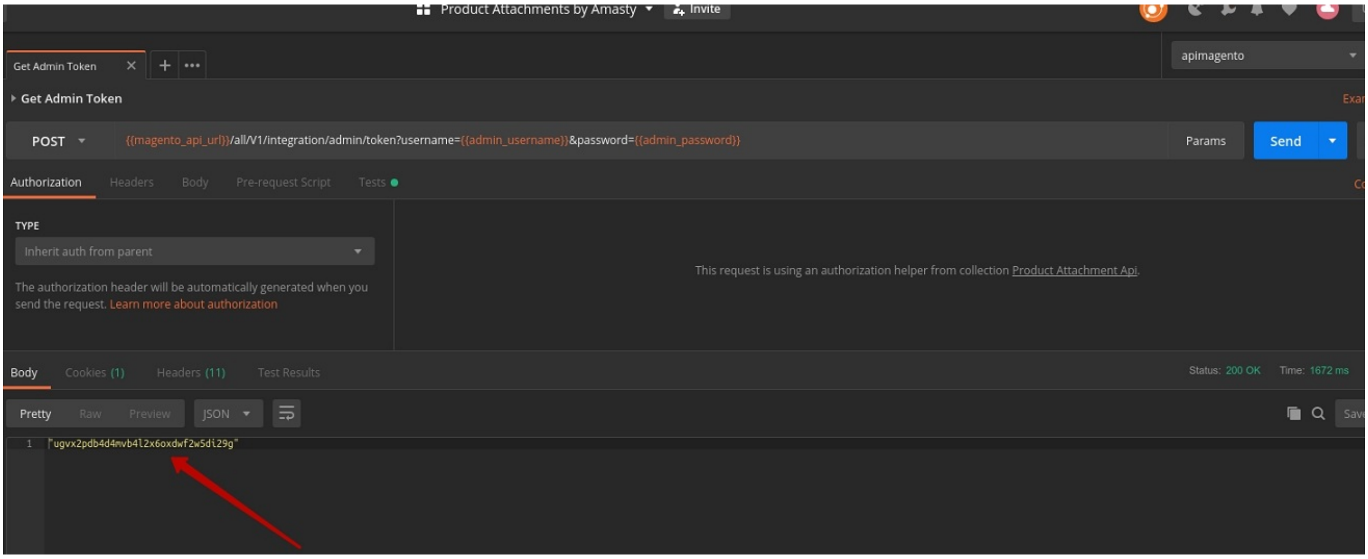
Inherit auth from parent

The authorization header will be automatically generated when you send the request. Learn more about authorization

This request is using an authorization helper from collection Product Attachment Api.

Hit the **Send** button.

The token will be generated in the response to the request.



Get Admin Token

POST {{magento_api_url}}/all/V1/integration/admin/token?username={{admin_username}}&password={{admin_password}}

TYPE

Inherit auth from parent

The authorization header will be automatically generated when you send the request. Learn more about authorization

This request is using an authorization helper from collection Product Attachment Api.

Status: 200 OK Time: 1672 ms

```
"ugvx2pdb4d4mvb4l2x6oxdwf2w5di29g"
```

Backend API Testing: Basic Operations

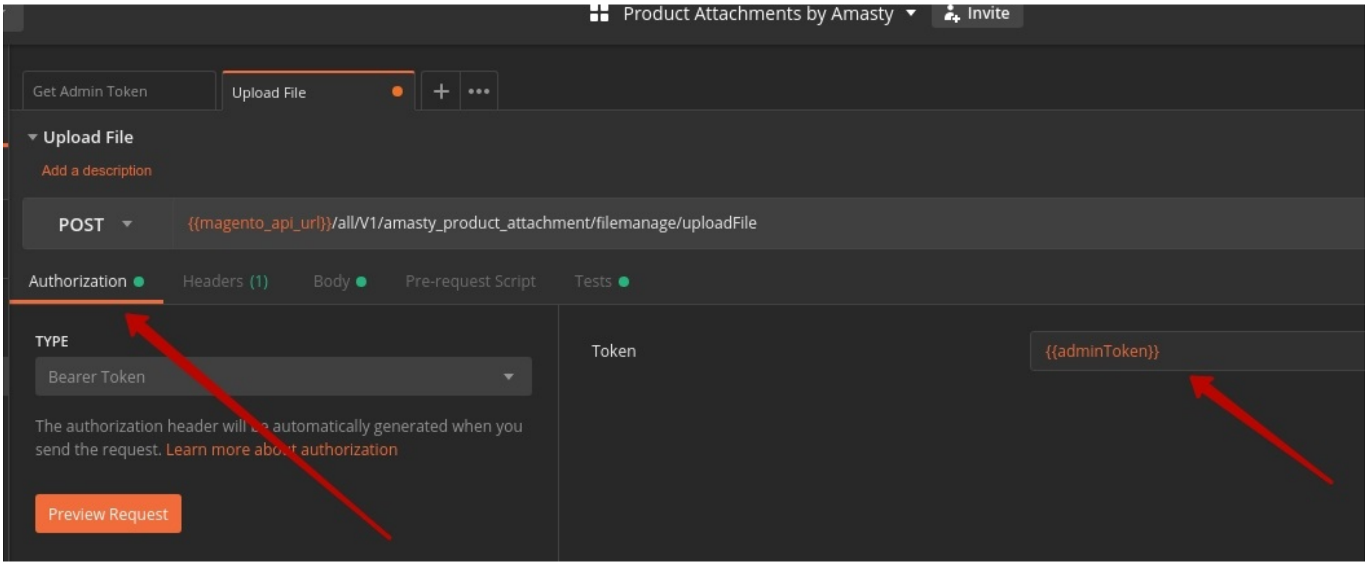
In Magento 2 Product Attachments admin can view, upload, edit and delete files.

In Postman the queries are the following:

- **GET**
- **POST**
- **PUT**
- **SEARCH**
- **DELETE**

Every time you want to perform operations as an Administrator, you need to authorize with **Admin Token**. Insert into the **Token** field:

```
{{adminToken}}
```



POST {{magento_api_url}}/all/V1/amasty_product_attachment/filemanage/uploadFile

TYPE

Bearer Token

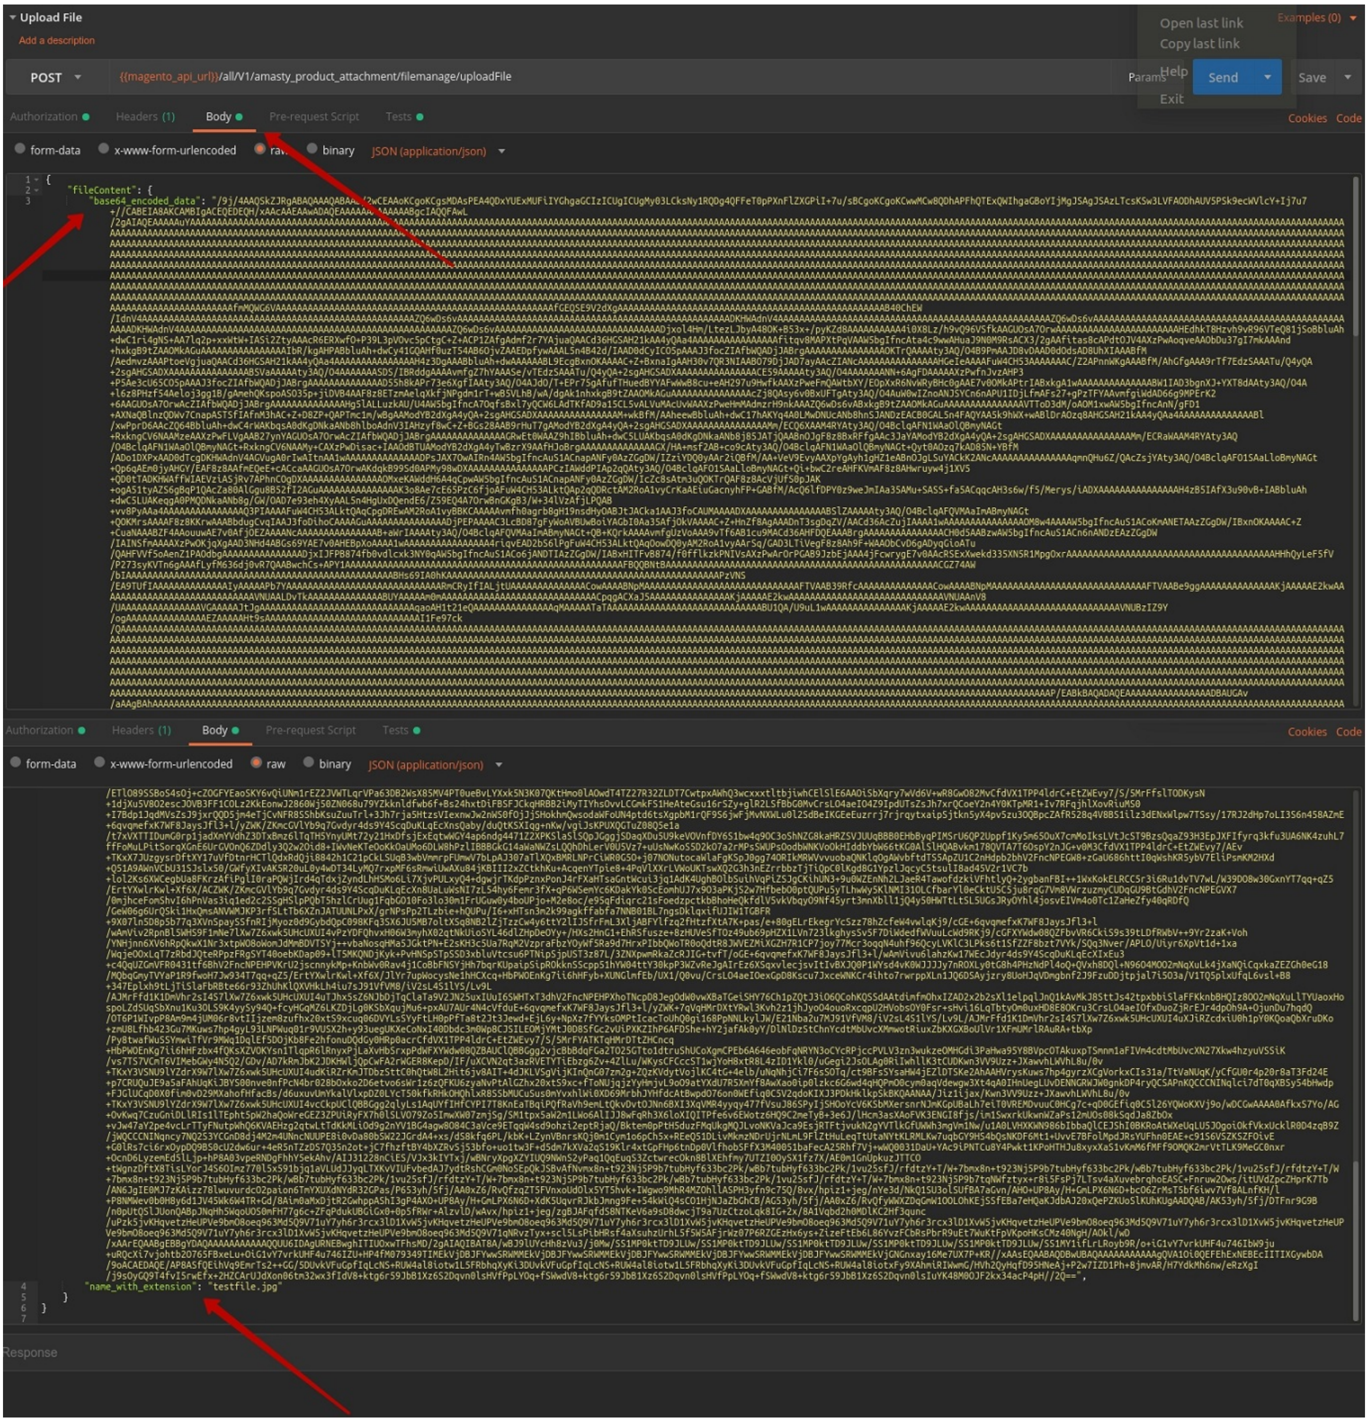
The authorization header will be automatically generated when you send the request. Learn more about authorization

Token

{{adminToken}}

Upload the File

To test file uploading, use the **POST** query. First of all, encrypt the picture in Base64. To upload the file, insert “string” into “base64_encoded_data”. This is how it reads: “base64_encoded_data”: “string”:

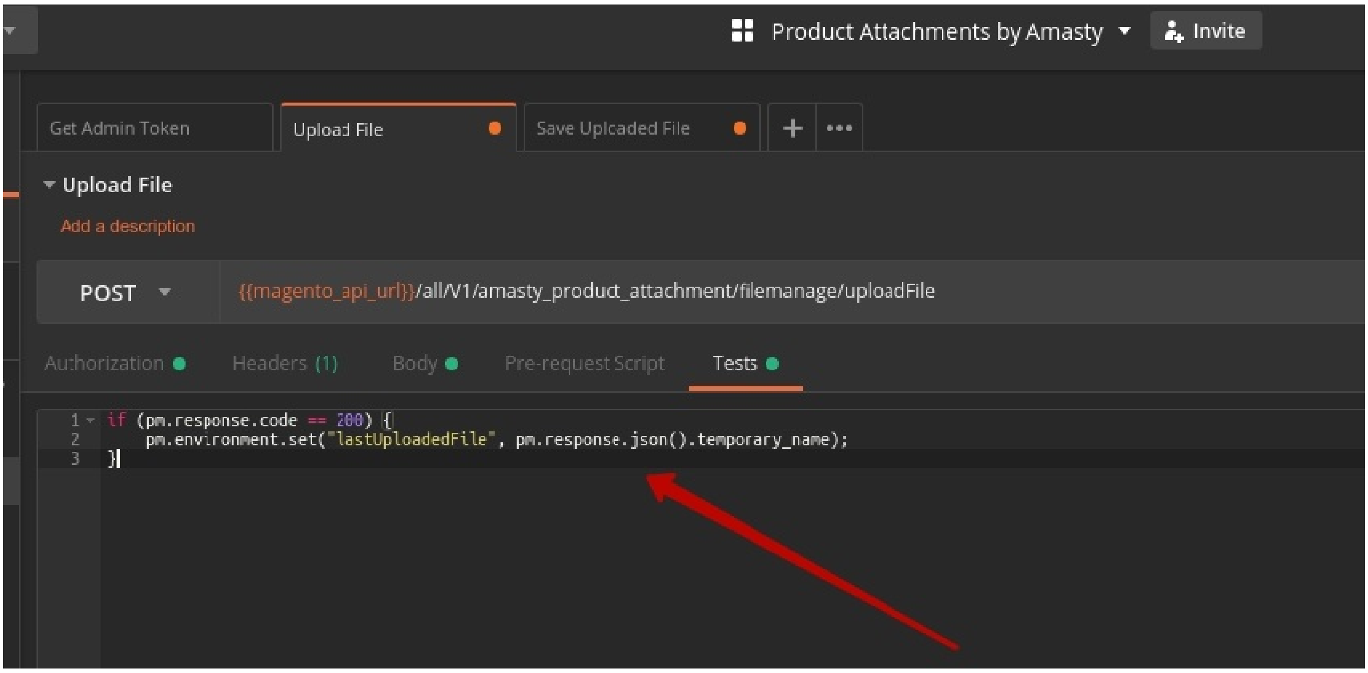


POST {{magento_api_url}}/all/V1/amasty_product_attachment/filemanage/uploadFile

○ form-data ○ x-www-form-urlencoded ● raw ○ binary JSON (application/json)

```
{
    "fileContent": {
        "base64_encoded_data": "/9j/4AAQSkZJRgABAQAAAQABAA/2wCEAAoKCgoKCgsMDAsPEA4QDxYUExMUFiIYGhgaGCIzICUgICUgMy03LCksNy1RQDg4QFFeT0pPXnFlZX
            +//CABEIA8AKCAMBIgACEQEDEQH/xAAcAAEAAwADAQEAAAAAA AAAAAABgcIAQQFAwL
            /2gAIAQEAAAAAuYAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAAA
            [illegible]
            /j9sOyGQ9T4fvI5rwEfx+2HZCArUJdXon06tm32wx3fIdV8+ktg6r59JbB1Xz6S2Dqvn0lsHVfPpLYOq+fSWwdV8+ktg6r59JbB1Xz6S2Dqvn0lsIuYK48M0OJF2kx34acP4pH//2Q==",
        "name_with_extension": "testfile.jpg"
    }
}
```

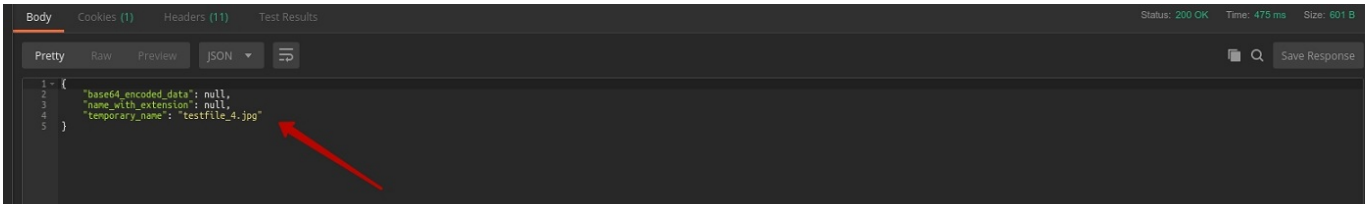
Check if the file is uploaded successfully and set it for use in further requests if needed:



POST {{magento_api_url}}/all/V1/amasty_product_attachment/filemanage/uploadFile

```
if (pm.response.code == 200) {
    pm.environment.set("lastUploadedFile", pm.response.json().temporary_name);
}
```

The response is positive, now you can use the uploaded file for testing the **Save Uploaded file** query:

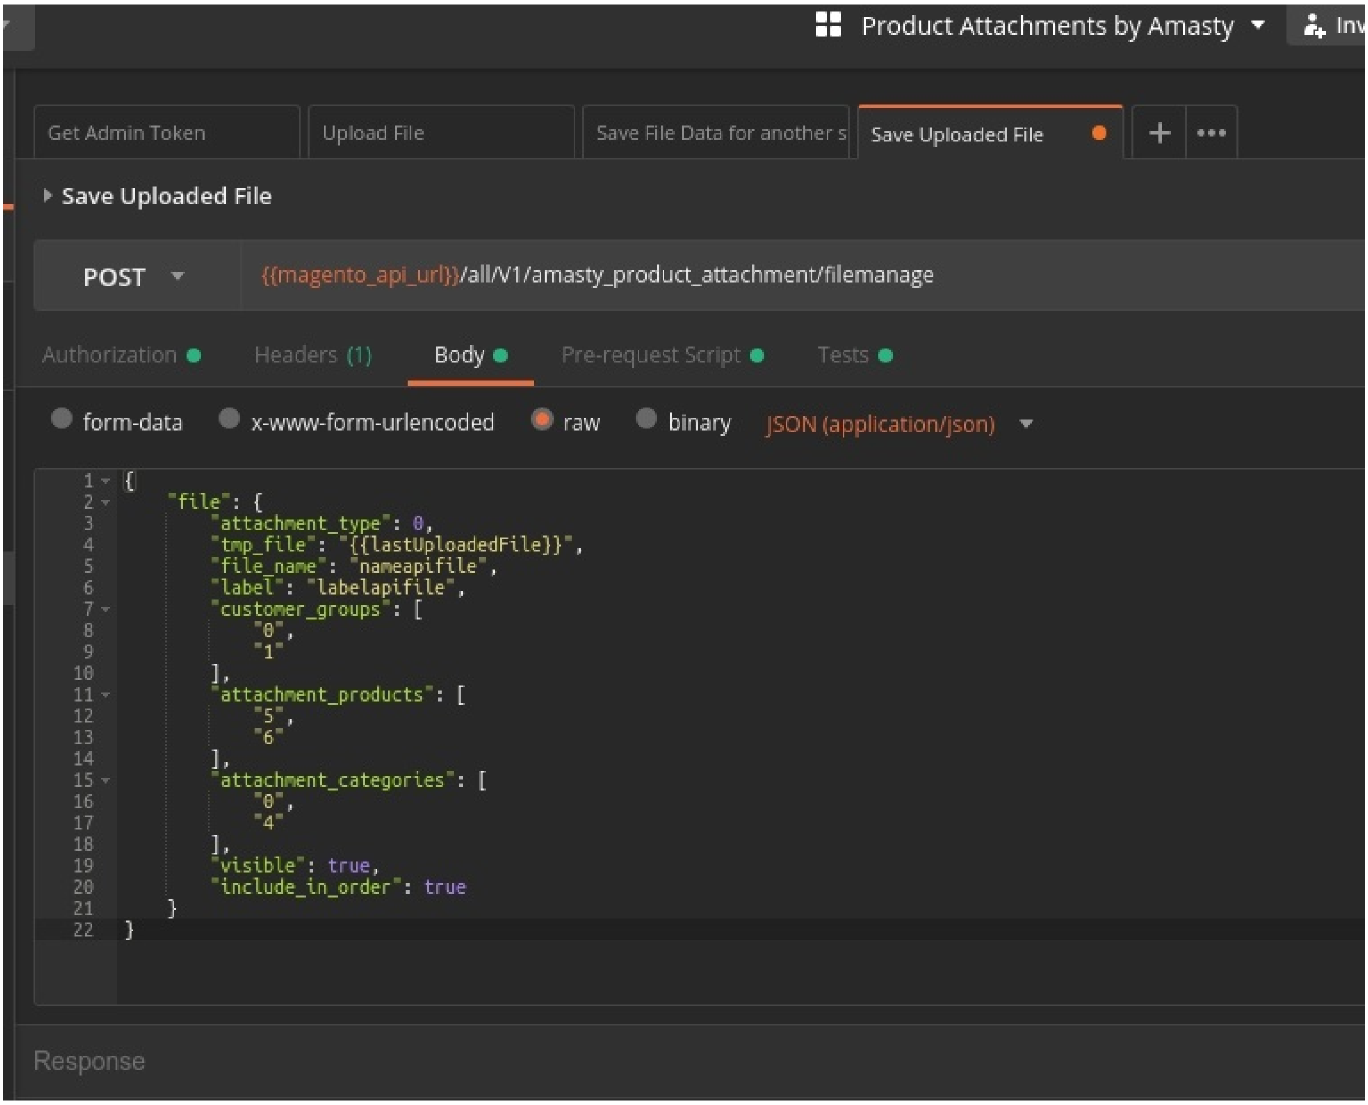


Status: 200 OK Time: 475 ms Size: 601 B

```
{
    "base64_encoded_data": null,
    "name_with_extension": null,
    "temporary_name": "testfile_4.jpg"
}
```

Save the Uploaded File

To save the file, use the **POST** query as well:



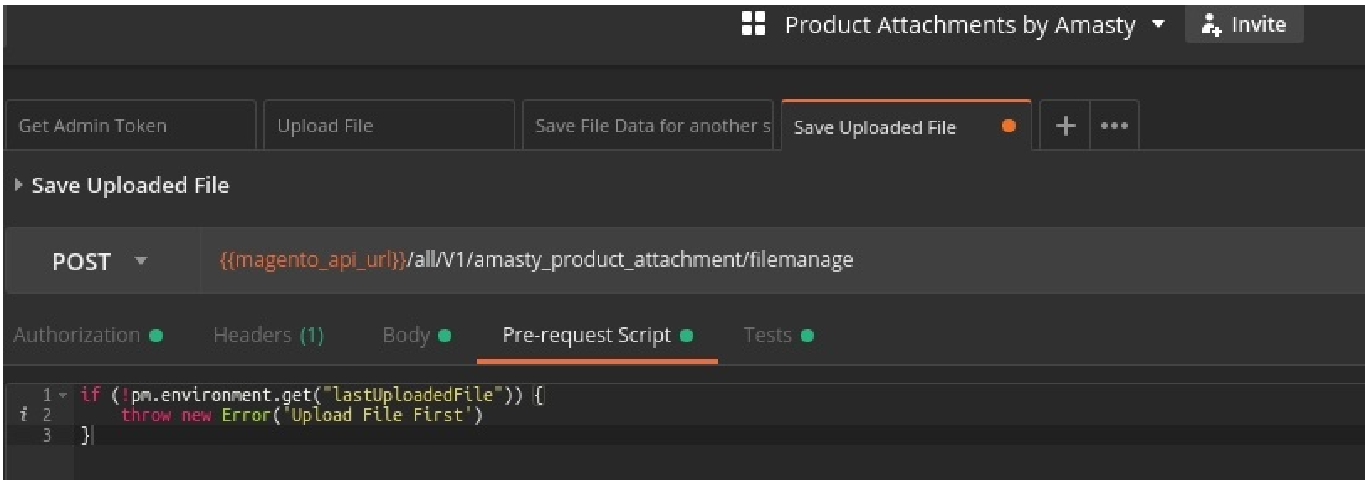
{{magento_api_url}}/all/V1/amasty_product_attachment/filemanage

```
{
    "file": {
        "attachment_type": 0,
        "tmp_file": "{{lastUploadedFile}}",
        "file_name": "nameapifile",
        "label": "labelapifile",
        "customer_groups": [
            "0",
            "1"
        ],
        "attachment_products": [
            "5",
            "6"
        ],
        "attachment_categories": [
            "0",
            "4"
        ],
        "visible": true,
        "include_in_order": true
    }
}
```

We add the loaded file “tmp_file” and write out the file data: name, label, etc:

```
{{lastUploadedFile}}
```

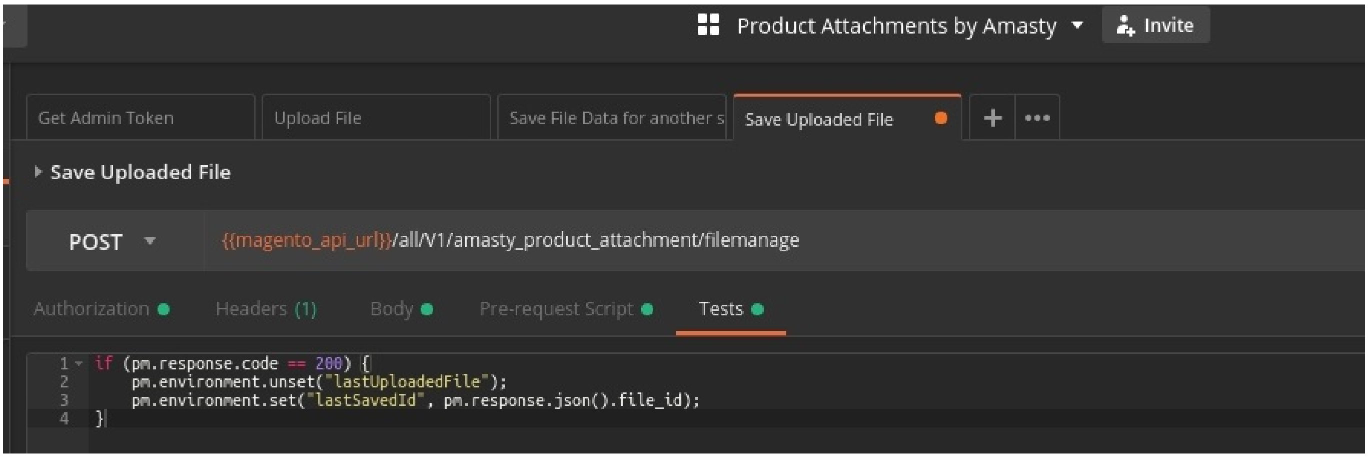
Before saving the file, make sure it was loaded. Check it with the help of a **pre-request script**. This script should be run before the actual request:



{{magento_api_url}}/all/V1/amasty_product_attachment/filemanage

```
if (!pm.environment.get("lastUploadedFile")) {
    throw new Error('Upload File First')
}
```

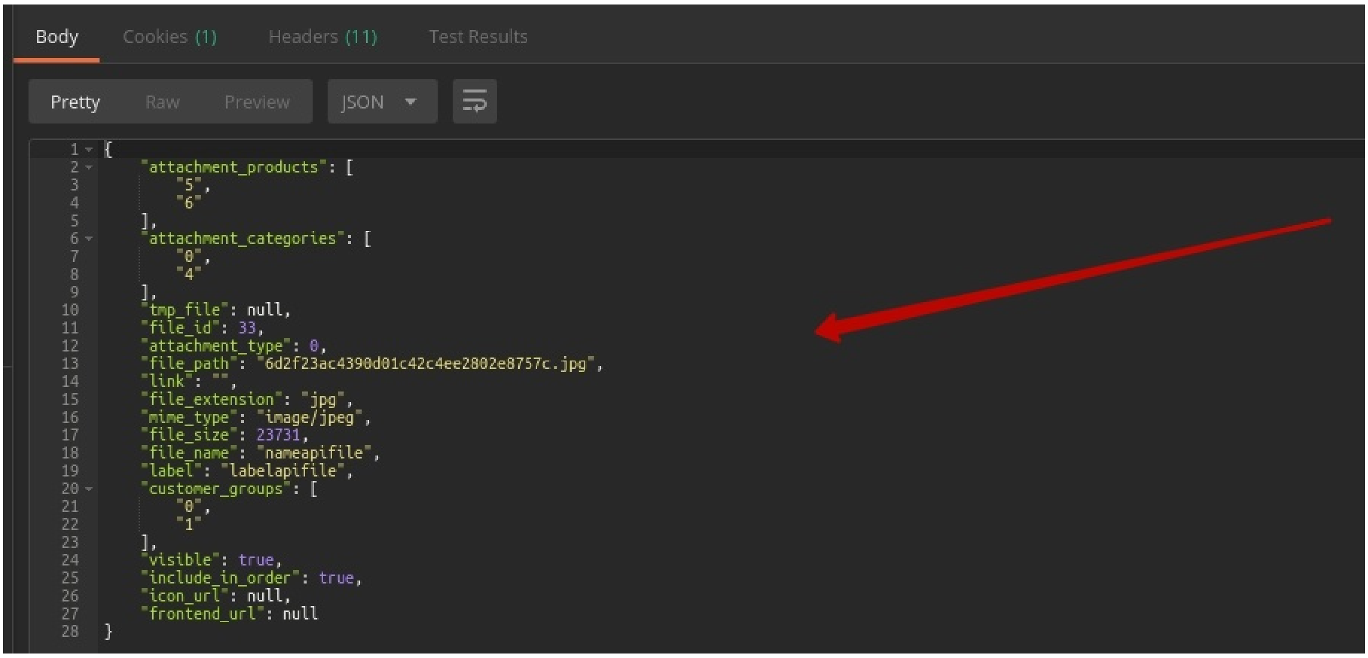
Unset the uploaded file and configure the settings to use it in the latter requests:



POST {{magento_api_url}}/all/V1/amasty_product_attachment/filemanage

```
if (pm.response.code == 200) {
    pm.environment.unset("lastUploadedFile");
    pm.environment.set("lastSavedId", pm.response.json().file_id);
}
```

The file has been saved successfully:



```
{
    "attachment_products": [
        "5",
        "6"
    ],
    "attachment_categories": [

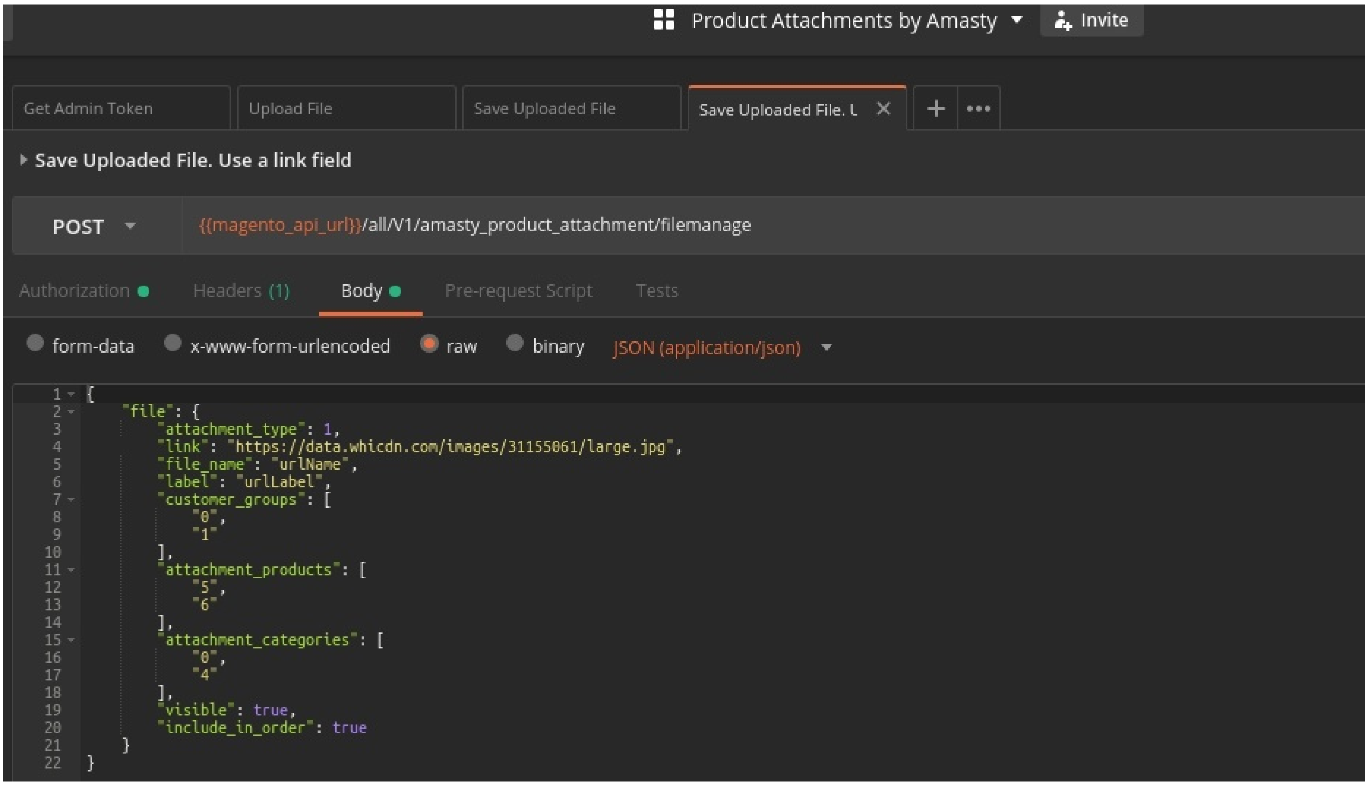
You may also save the uploaded file with the help of its URL (using a link field).

Save the File Data by the URL

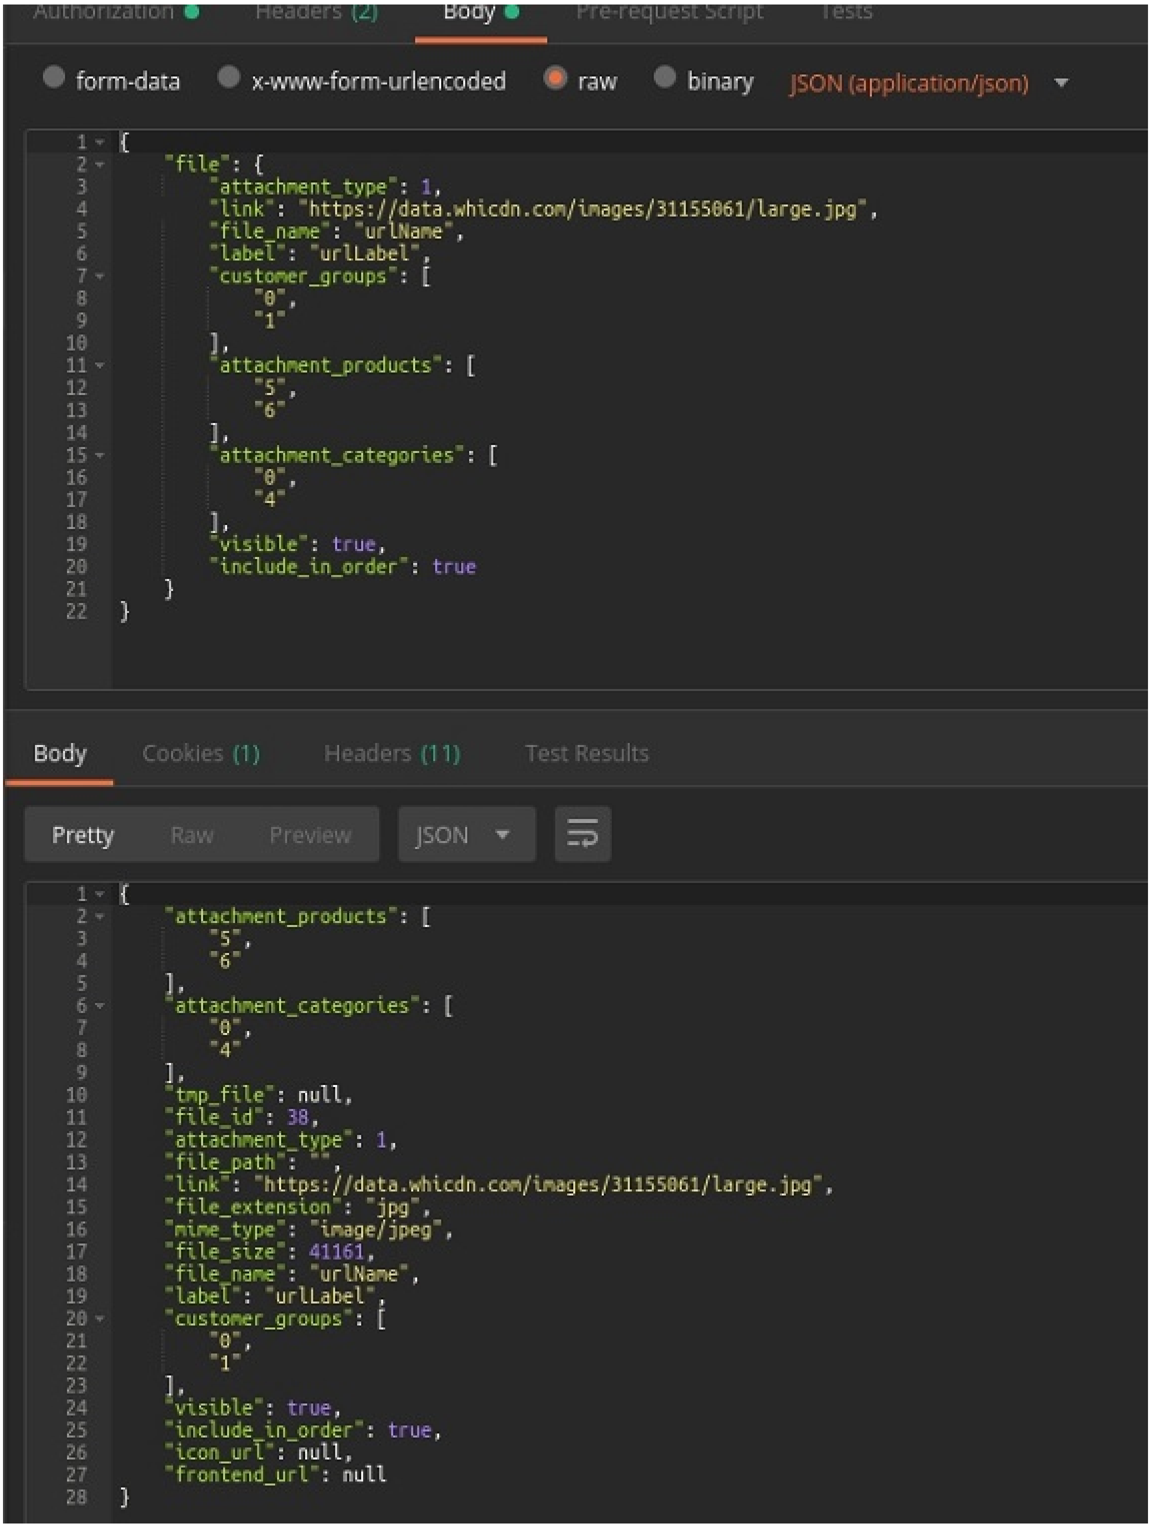
In this case **POST** request is also used. Input the URL that points to the file location. Then set the file name, label, etc., and hit the **Send** button:



```
{{magento_api_url}}/all/V1/amasty_product_attachment/filemanage
```

```
{
    "file": {
        "attachment_type": 1,
        "link": "https://data.whicdn.com/images/31155061/large.jpg",
        "file_name": "urlName",
        "label": "urlLabel",
        "customer_groups": [
            "0",
            "1"
        ],
        "attachment_products": [
            "5",
            "6"
        ],
        "attachment_categories": [
            "0",
            "4"
        ],
        "visible": true,
        "include_in_order": true
    }
}
```

The response is positive:



```
{
    "file": {
        "attachment_type": 1,
        "link": "https://data.whicdn.com/images/31155061/large.jpg",
        "file_name": "urlName",
        "label": "urlLabel",
        "customer_groups": [

        "1"
    ],
    "visible": true,
    "include_in_order": true,
    "icon_url": null,
    "frontend_url": null
}
```

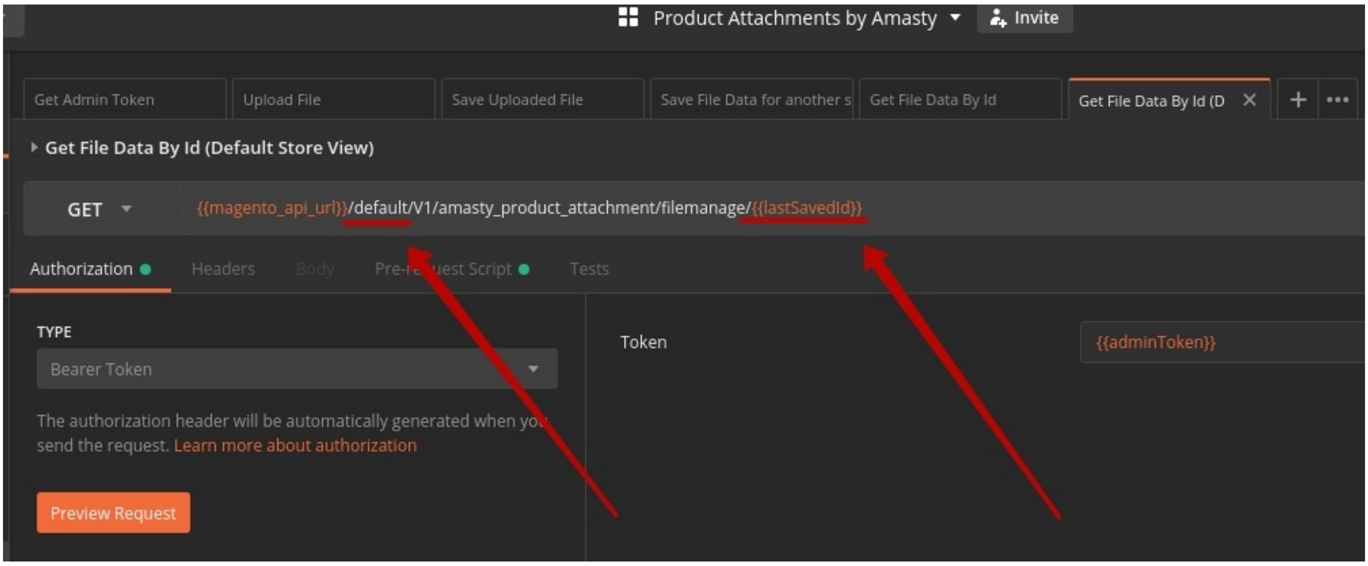
The file has been saved.

Get File Data by the File ID

Get queries let you output the information on a certain file attached to a product. Admin can perform this operation for *Default Store View* and for *All Store Views*.

Let's get the data on **LastSavedId** with the help of the **GET** query. Set the URL indicating the needed

Store View and the file id:



Get File Data By Id (Default Store View)

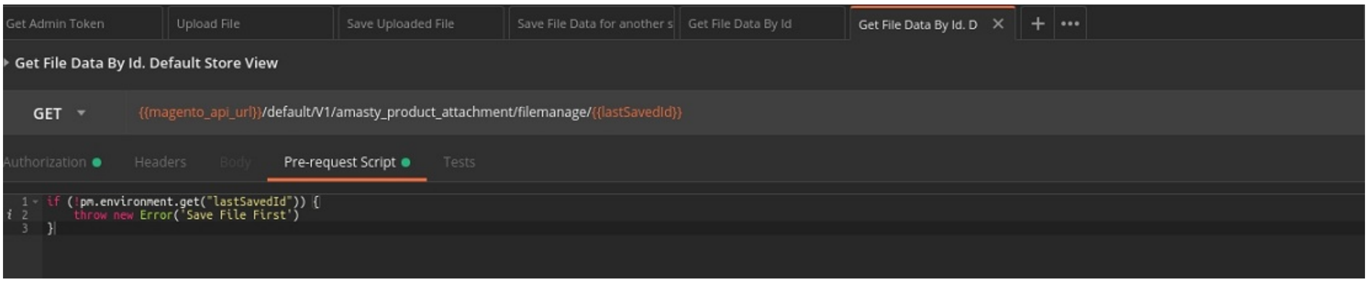
GET {{magento_api_url}}/default/V1/amasty_product_attachment/filemanage/{{lastSavedId}}

TYPE Bearer Token

The authorization header will be automatically generated when you send the request. Learn more about authorization

Token {{adminToken}}

Pay attention to a **Pre-request Script**. Before outputting the info about the file, make sure it has been saved:



Get File Data By Id. Default Store View

GET {{magento_api_url}}/default/V1/amasty_product_attachment/filemanage/{{lastSavedId}}

```
if (!pm.environment.get("lastSavedId")) {
    throw new Error('Save File First')
}
```

If the file is missing, **upload** and **save** it.

Check if the information in the extension settings matches the info for the uploaded file:

```

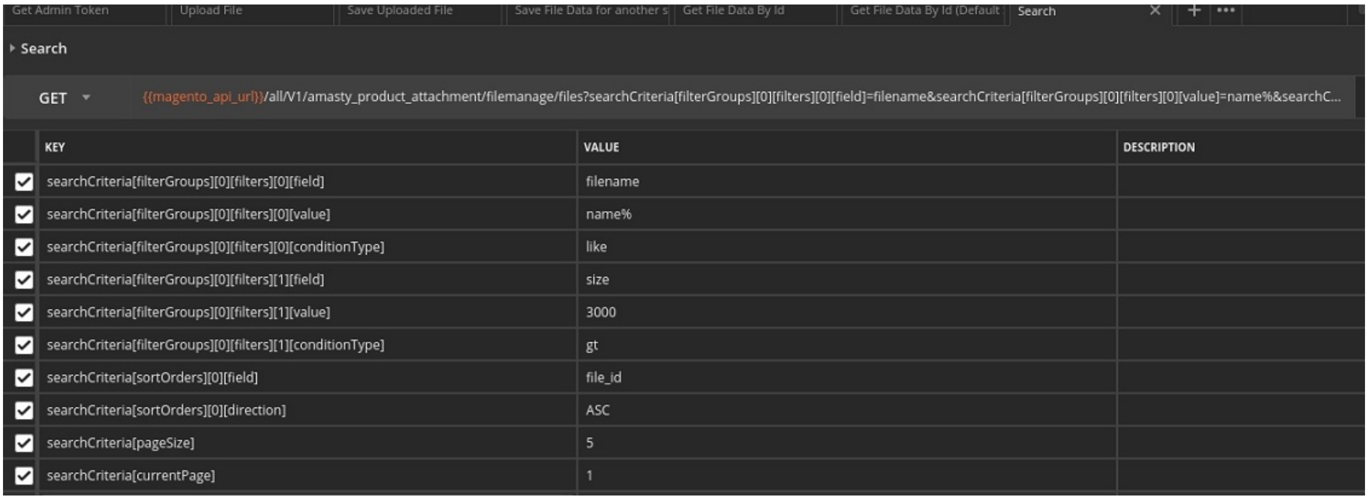
Search for the File

Postman allows to create search queries by any specific attribute. You can also sort the search results the way you want to, reorder them and set the number of the results to be displayed in the response section:



```
{{magento_api_url}}/all/V1/amasty_product_attachment/filemanage/files?searchCriteria[filterGroups][0][filters][0][field]=filename&searchCriteria[filterGroups][0][filters][0][value]=name%&searchC...
```

	KEY	VALUE	DESCRIPTION
☑	searchCriteria[filterGroups][0][filters][0][field]	filename	
☑	searchCriteria[filterGroups][0][filters][0][value]	name%	
☑	searchCriteria[filterGroups][0][filters][0][conditionType]	like	
☑	searchCriteria[filterGroups][0][filters][1][field]	size	
☑	searchCriteria[filterGroups][0][filters][1][value]	3000	
☑	searchCriteria[filterGroups][0][filters][1][conditionType]	gt	
☑	searchCriteria[sortOrders][0][field]	file_id	
☑	searchCriteria[sortOrders][0][direction]	ASC	
☑	searchCriteria[pageSize]	5	
☑	searchCriteria[currentPage]	1	

Let's see an example.

You are going to search for the attachment with the name starting with “filename” and with the size greater than 3000 Bytes. And you want the results to be sorted by id in the ascending order with 5 files per page.

Start with breaking the query into lines:

```
{{magento_api_url}}/all/V1/amasty_product_attachment/filemanage/files?
```

1. File name starts with “name”:

```
searchCriteria[filterGroups][0][filters][0][field]=filename&
searchCriteria[filterGroups][0][filters][0][value]=name%&
searchCriteria[filterGroups][0][filters][0][conditionType]=like&
```

2. The size is greater than 3000 Byte:

```
searchCriteria[filterGroups][0][filters][1][field]=size&
searchCriteria[filterGroups][0][filters][1][value]=3000&
searchCriteria[filterGroups][0][filters][1][conditionType]=gt&
```

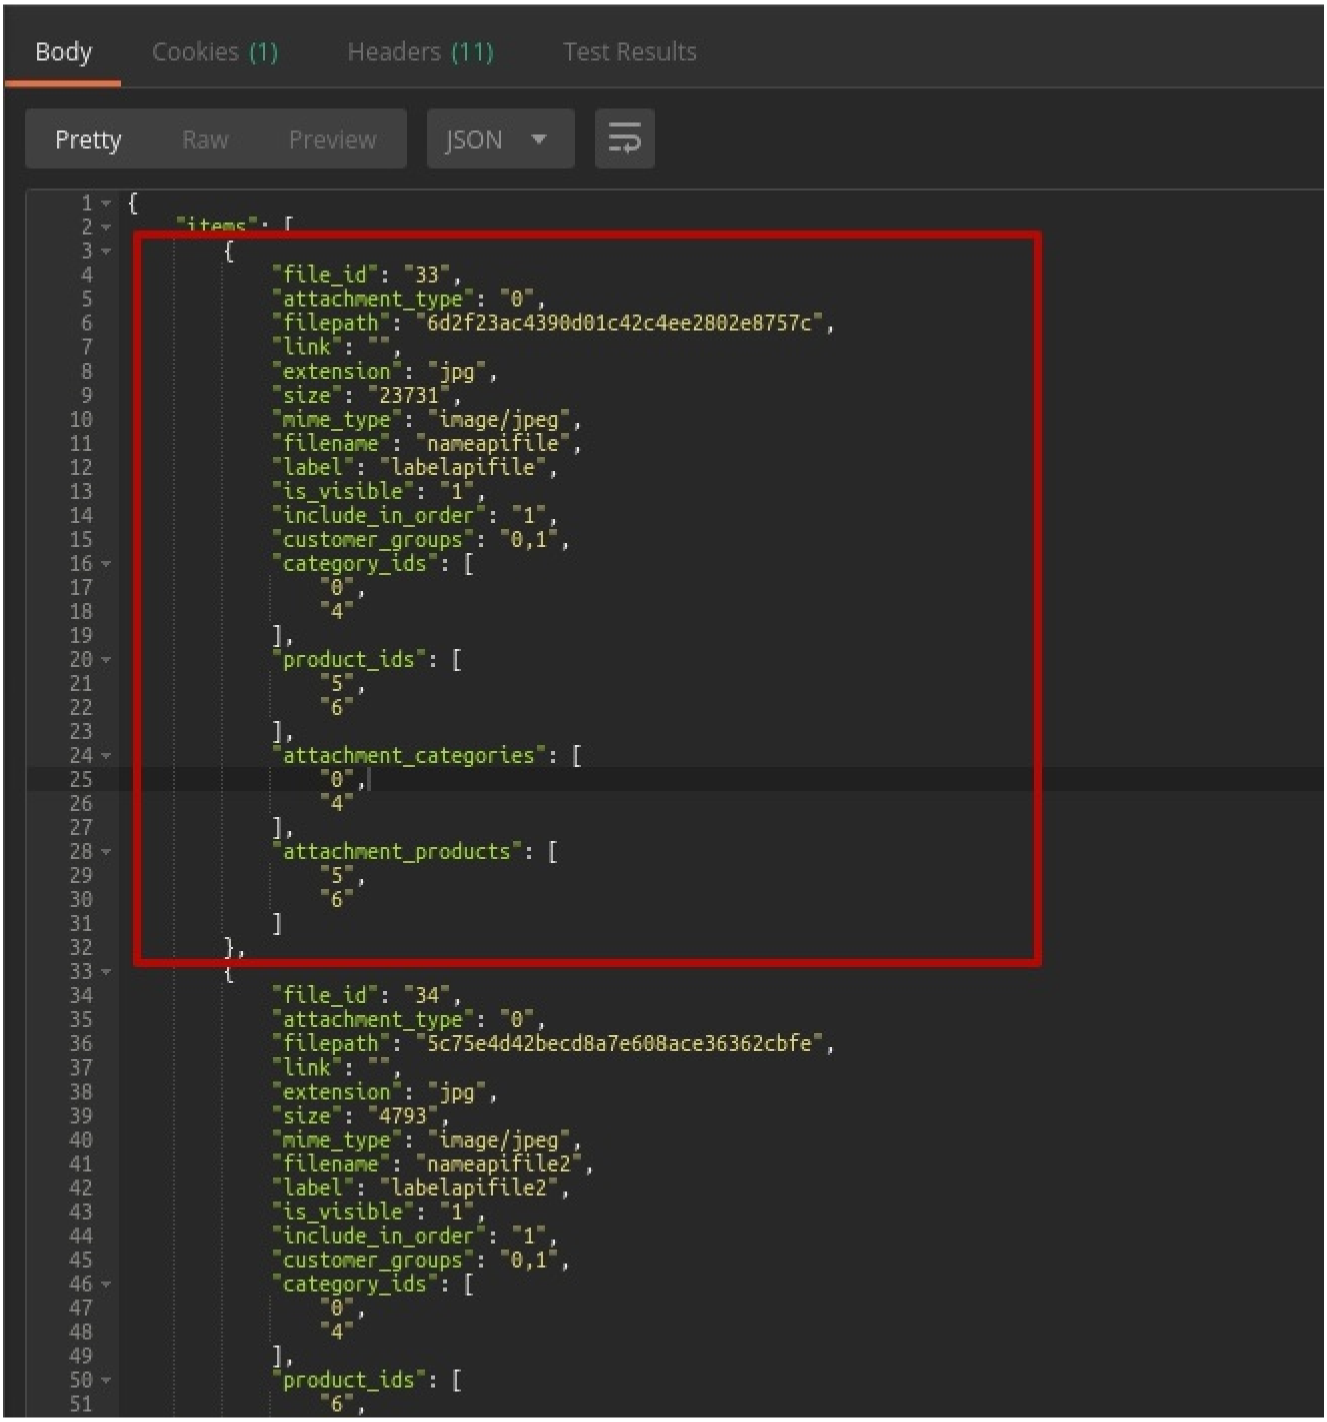
3. The results are sorted by id in ascending order:

```
searchCriteria[sortOrders][0][field]=file_id&
searchCriteria[sortOrders][0][direction]=ASC&
```

4. The number of files per page is 5 and the number of page for viewing is 1:

```
searchCriteria[pageSize]=5& searchCriteria[currentPage]=1
```

So 3 files are uploaded , and 2 of them meet the search query:



```
{
    "items": [
        {
            "file_id": "33",
            "attachment_type": "0",
            "filepath": "6d2f23ac4390d01c42c4ee2802e8757c",
            "link": "",
            "extension": "jpg",
            "size": "23731",
            "mime_type": "image/jpeg",
            "filename": "nameapifile",
            "label": "labelapifile",
            "is_visible": "1",
            "include_in_order": "1",
            "customer_groups": "0,1",
            "category_ids": [
                "0",
                "4"
            ],
            "product_ids": [
                "5",
                "6"
            ],
            "attachment_categories": [
                "0",
                "4"
            ],
            "attachment_products": [
                "5",
                "6"
            ]
        },

            "filepath": "5c75e4d42becd8a7e608ace36362cbfe",
            "link": "",
            "extension": "jpg",
            "size": "4793",
            "mime_type": "image/jpeg",
            "filename": "nameapifile2",
            "label": "labelapifile2",
            "is_visible": "1",
            "include_in_order": "1",
            "customer_groups": "0,1",
            "category_ids": [
                "0",
                "4"
            ],
            "product_ids": [
                "6",
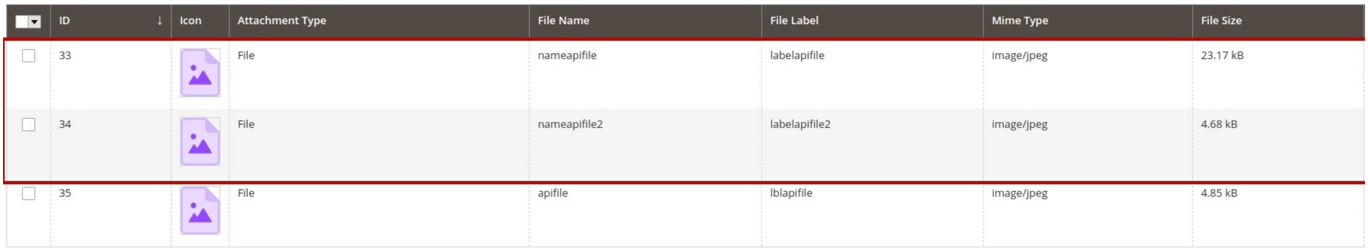
                "7"
            ],
            "attachment_categories": [
                "0",
                "4"
            ],
            "attachment_products": [
                "6",
                "7"
            ]
        }
    ],
    "search_criteria": {
        "filter_groups": [
            {
                "filters": [
                    {
                        "field": "filename",
                        "value": "name%",
                        "condition_type": "like"
                    },
                    {
                        "field": "size",
                        "value": "3000",
                        "condition_type": "gt"
                    }
                ]
            }
        ],
        "sort_orders": [
            {
                "field": "file_id",
                "direction": "ASC"
            }
        ],
        "page_size": 5,
        "current_page": 1
    },
    "total_count": 2
}
```

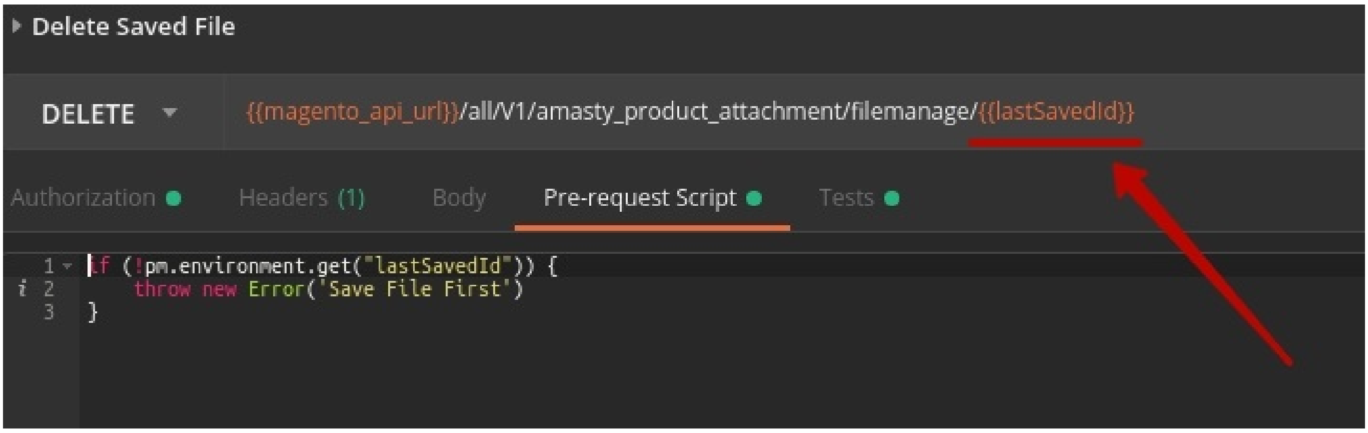
Compare it to Product attachments settings:



☐	ID ↓	Icon	Attachment Type	File Name	File Label	Mime Type	File Size
☐	33		File	nameapifile	labelapifile	image/jpeg	23.17 kB
☐	34		File	nameapifile2	labelapifile2	image/jpeg	4.68 kB
☐	35		File	apifile	lblapifile	image/jpeg	4.85 kB

Delete the File

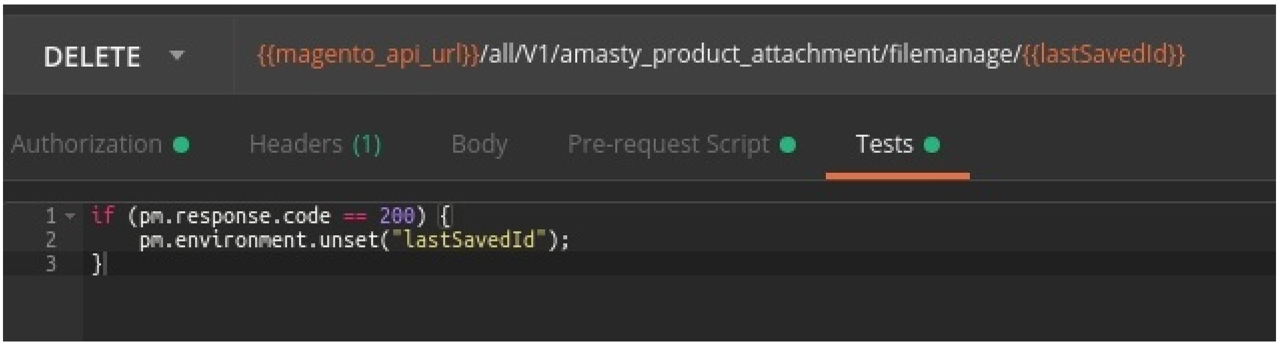
For example, you've decided to delete the last saved file. So, input the file id in the URL and see if the file is saved with a pre-request script:



{{magento_api_url}}/all/V1/amasty_product_attachment/filemanage/{{lastSavedId}}

```
if (!pm.environment.get("lastSavedId")) {
    throw new Error('Save File First')
}
```

After the file is saved, you can go back to testing the delete function and unset the file:



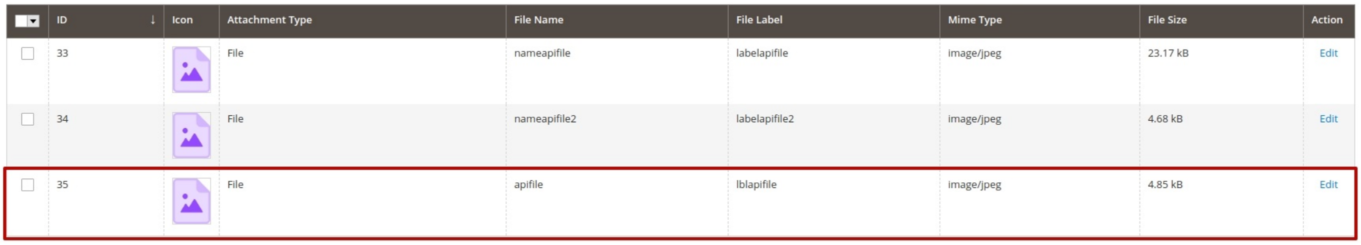
{{magento_api_url}}/all/V1/amasty_product_attachment/filemanage/{{lastSavedId}}

```
if (pm.response.code == 200) {
    pm.environment.unset("lastSavedId");
}
```

The file is deleted.

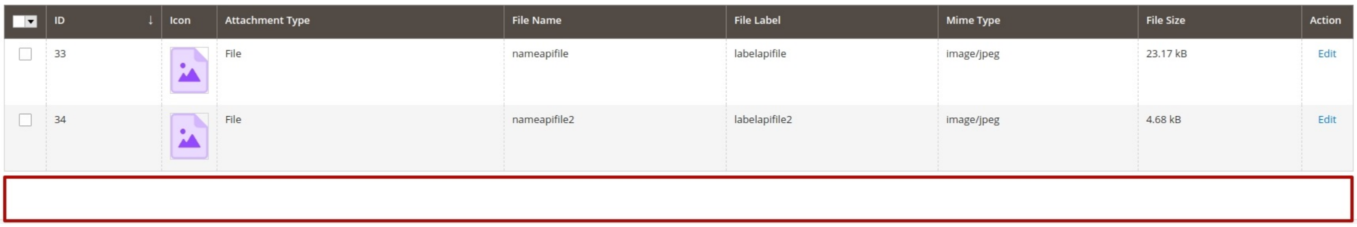
Check the result in the extension settings:

BEFORE



☐	ID ↓	Icon	Attachment Type	File Name	File Label	Mime Type	File Size	Action
☐	33		File	nameapifile	labelapifile	image/jpeg	23.17 kB	Edit
☐	34		File	nameapifile2	labelapifile2	image/jpeg	4.68 kB	Edit
☐	35		File	apifile	lblapifile	image/jpeg	4.85 kB	Edit

AFTER



☐	ID ↓	Icon	Attachment Type	File Name	File Label	Mime Type	File Size	Action
☐	33		File	nameapifile	labelapifile	image/jpeg	23.17 kB	Edit
☐	34		File	nameapifile2	labelapifile2	image/jpeg	4.68 kB	Edit

Now you are sure the file has been deleted.

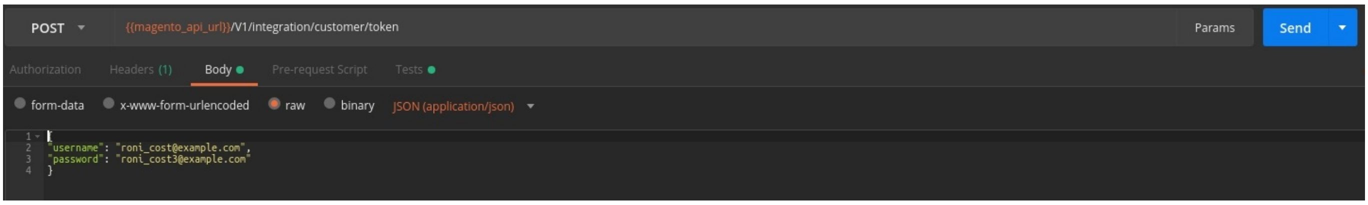
Frontend API Testing: Getting Customer Token

While the Backend API testing deals with admin users’ interactions, frontend API testing does the same for the customers. The operations they perform are not the same.

To test operations that customers perform, you need to log in as a registered customer and get a customer token.

The algorithm is similar to the process of getting an admin token.

Input the username and password of a test registered customer in the body and click **Send**:

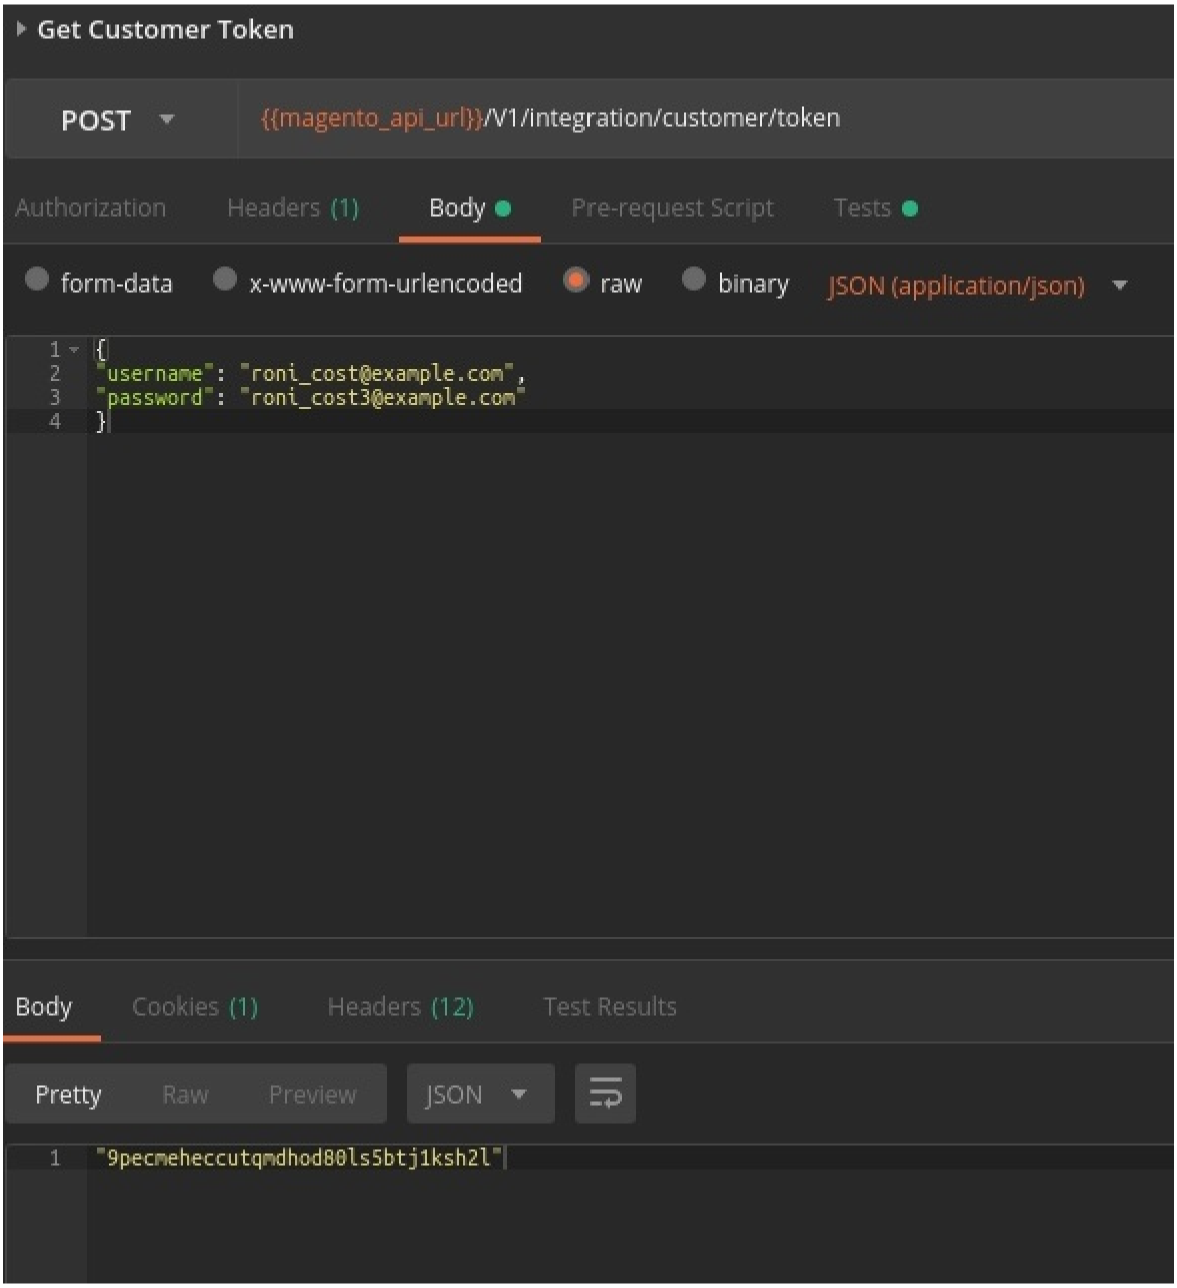


POST {{magento_api_url}}/V1/integration/customer/token

○ form-data ○ x-www-form-urlencoded ● raw ○ binary JSON (application/json)

```
{
"username": "roni_cost@example.com",
"password": "roni_cost3@example.com"
}
```

Here is the **Customer Token**.



Get Customer Token

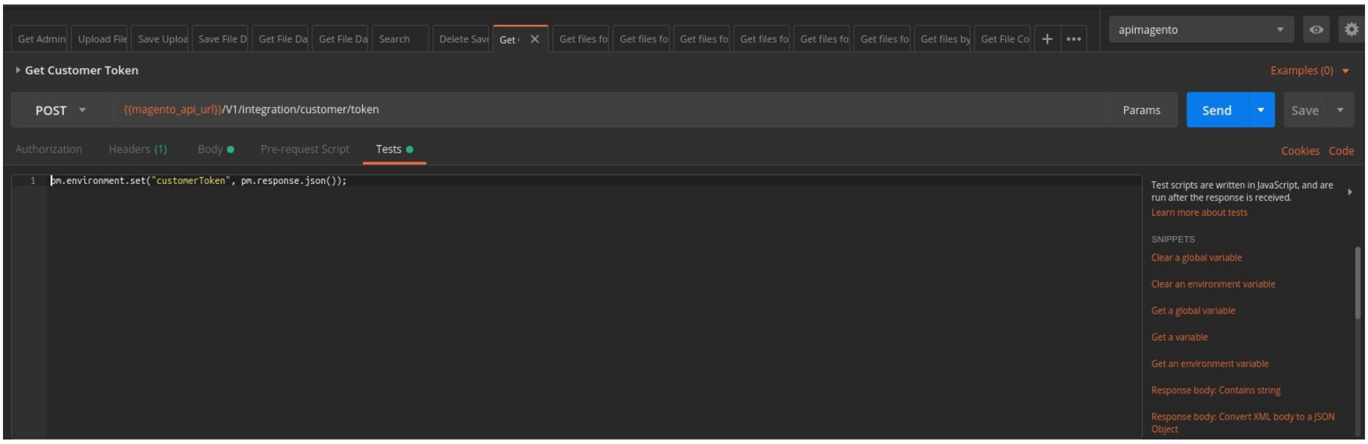
POST {{magento_api_url}}/V1/integration/customer/token

○ form-data ○ x-www-form-urlencoded ● raw ○ binary JSON (application/json)

```
{
"username": "roni_cost@example.com",
"password": "roni_cost3@example.com"
}
```

```
"9pecmeheccutqmdhod80ls5btj1ksh2l"
```

Now you can use this token in **Tests tab**.



POST {{magento_api_url}}/V1/integration/customer/token

```
pm.environment.set("customerToken", pm.response.json());
```

Test scripts are written in JavaScript, and are run after the response is received.

Response body: Contains string
Response body: Convert XML body to a JSON Object

Unlike admin users, visitors and customers can only view or download files. You can test it using **Get**

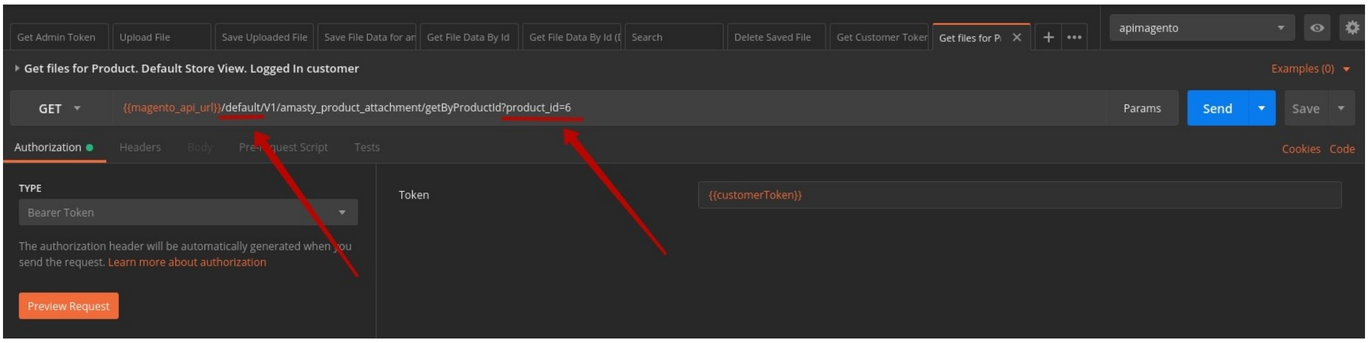
queries.

Get Files for Product

This test refers to the *Default Store View* and works with *Logged in* customers.

To see the attachments of a given product available for a registered customer in a particular Store View, use the **GET** method.

Input the **Store View** and the **product ID** in the URL:



Get files for Product. Default Store View. Logged In customer

GET {{magento_api_url}}/default/V1/amasty_product_attachment/getByProductId?product_id=6

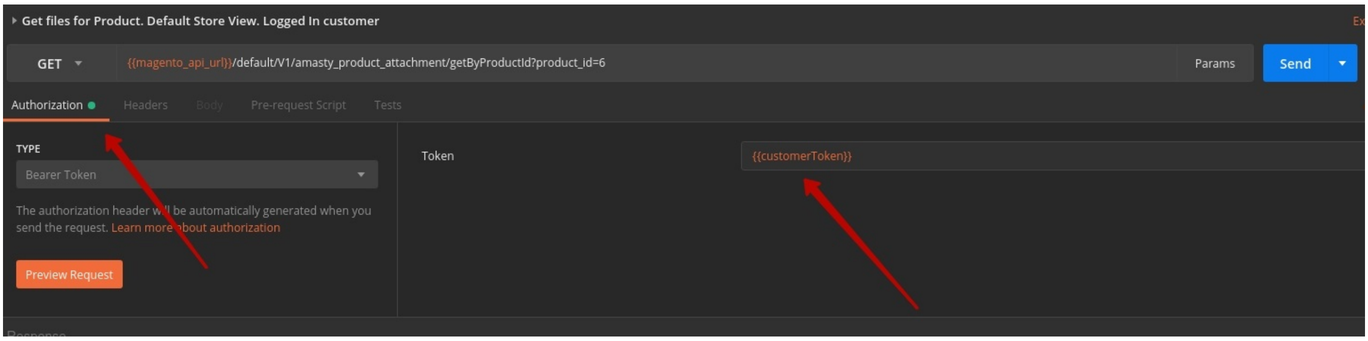
TYPE Bearer Token

The authorization header will be automatically generated when you send the request. Learn more about authorization

Token {{customerToken}}

To use the Customer Token you have got previously, input in the **Token field**:

```
{{customerToken}}
```



Get files for Product. Default Store View. Logged In customer

GET {{magento_api_url}}/default/V1/amasty_product_attachment/getByProductId?product_id=6

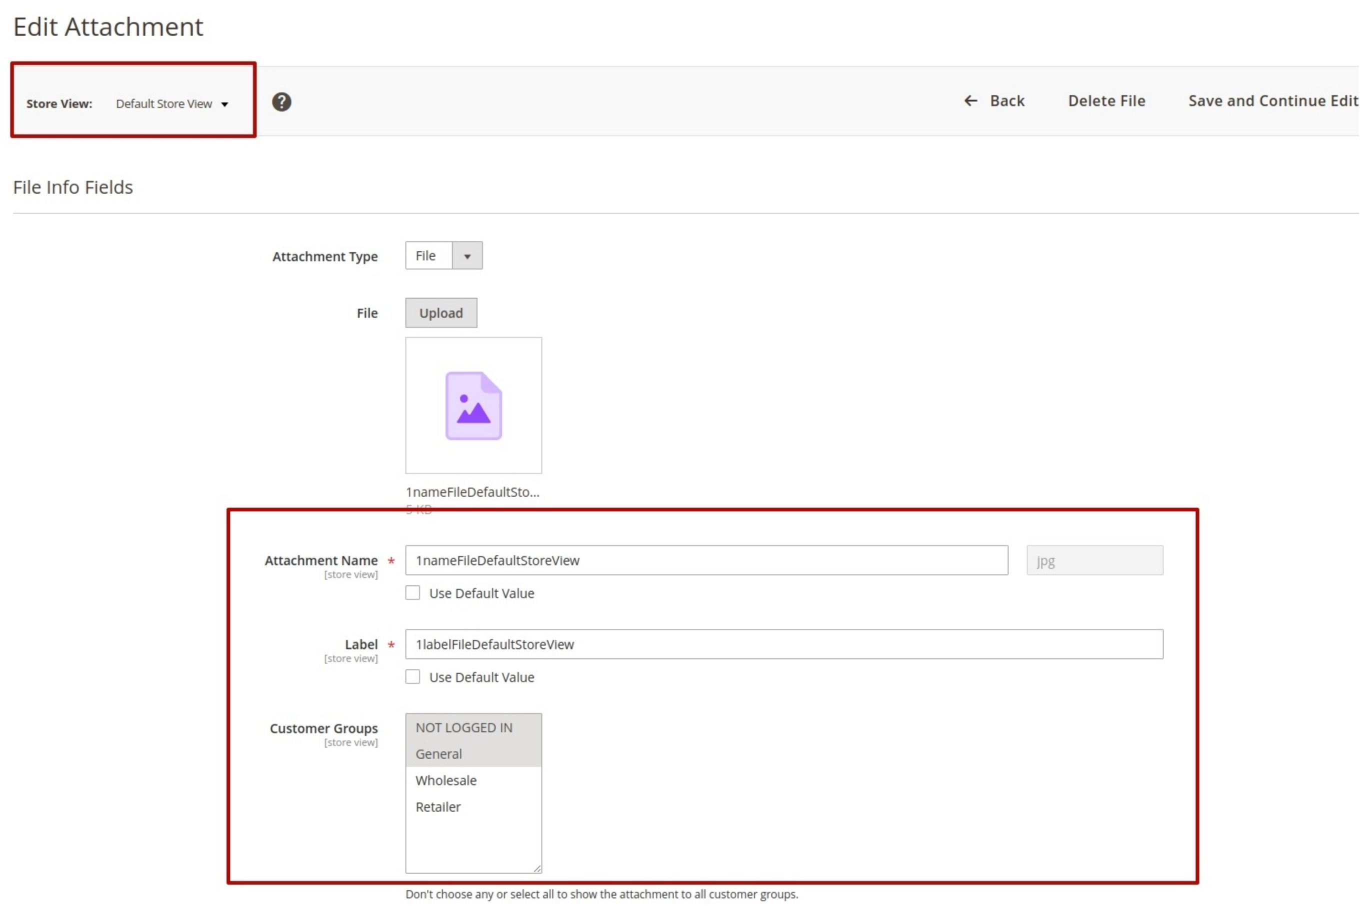
TYPE Bearer Token

The authorization header will be automatically generated when you send the request. Learn more about authorization

Token {{customerToken}}

Here we see that 2 files are attached to the product with the specified ID:

- The first attachment is available for a registered user:



Edit Attachment

Store View: Default Store View

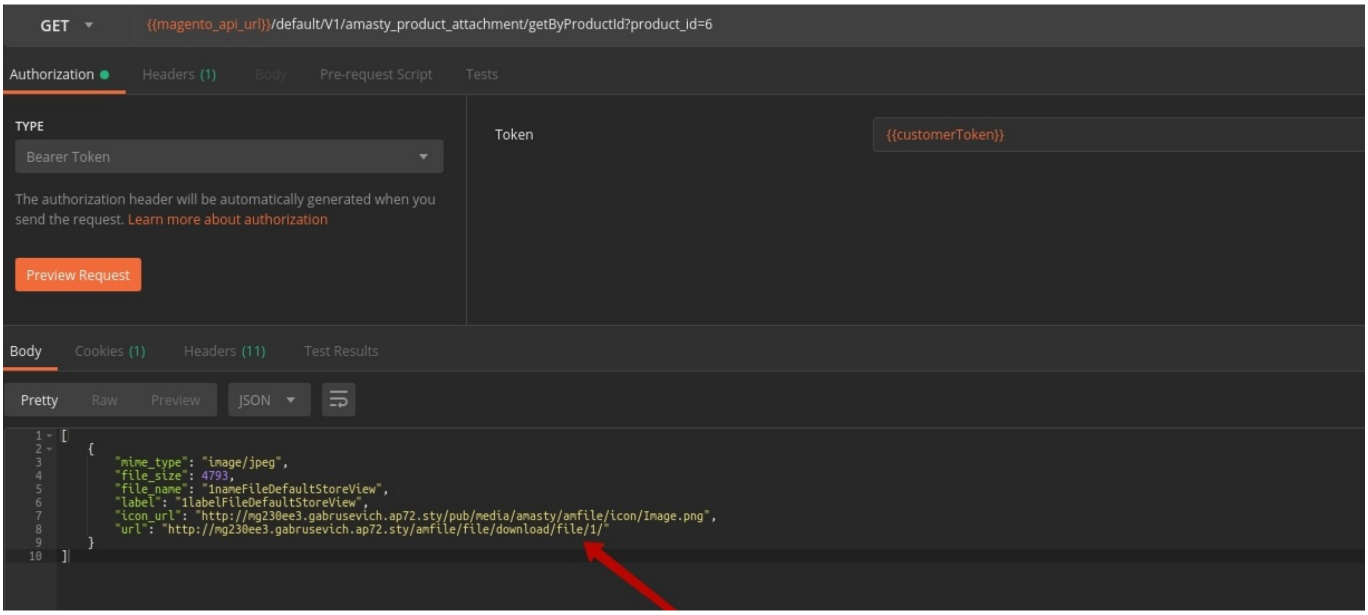
The attachment info is displayed correctly:



GET {{magento_api_url}}/default/V1/amasty_product_attachment/getByProductId?product_id=6

TYPE
Bearer Token

The authorization header will be automatically generated when you send the request. Learn more about authorization

Token {{customerToken}}

```
[
    {
        "mime_type": "image/jpeg",
        "file_size": 4793,
        "file_name": "1nameFileDefaultStoreView",
        "label": "1labelFileDefaultStoreView",
        "icon_url": "http://mg230ee3.gabrusevich.ap72.sty/pub/media/amasty/amfile/icon/Image.png",
        "url": "http://mg230ee3.gabrusevich.ap72.sty/amfile/file/download/file/1/"
    }
]
```

Let's check how it works for **NO Logged In Customer**.

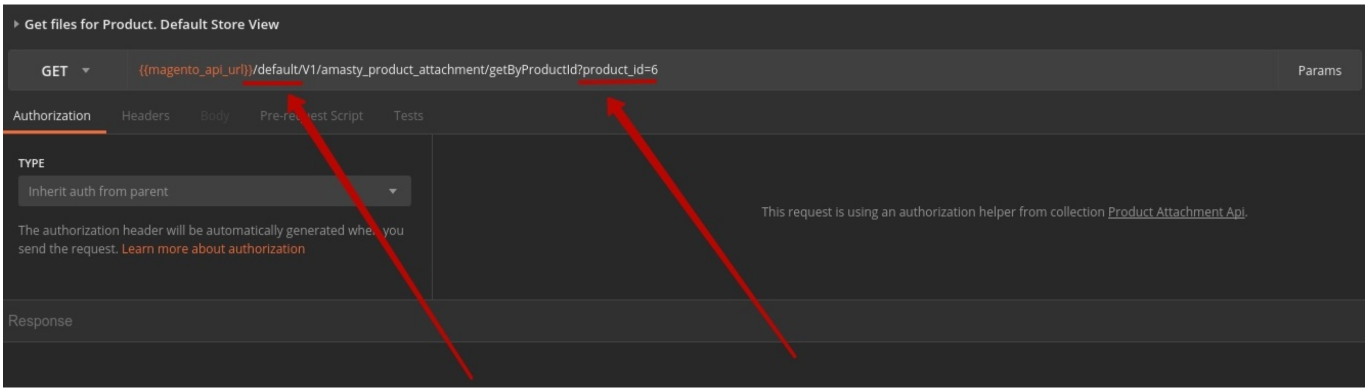
Get Files for Product in Different Store Views

The extension allows to adjust file display according to the Store View.

Here is the example on how it works for Default and, say, Germany Store Views. To test that we need **GET** query.

Specify the **Store View** and the **product ID** in the URL for Default and Germany Store Views.

Default Store View:



Get files for Product. Default Store View

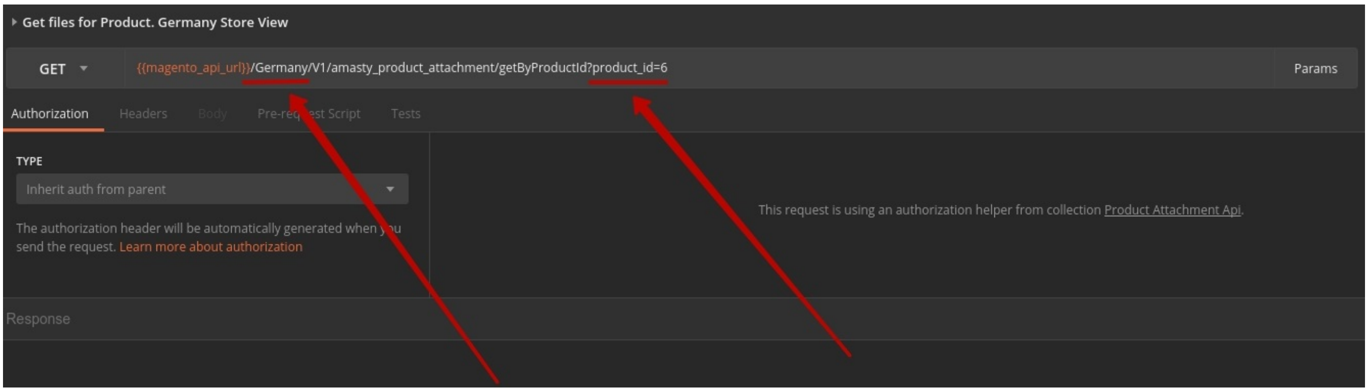
GET {{magento_api_url}}/default/V1/amasty_product_attachment/getByProductId?product_id=6

TYPE
Inherit auth from parent

The authorization header will be automatically generated when you send the request. Learn more about authorization

This request is using an authorization helper from collection Product Attachment Api.

Germany Store View:



Get files for Product. Germany Store View

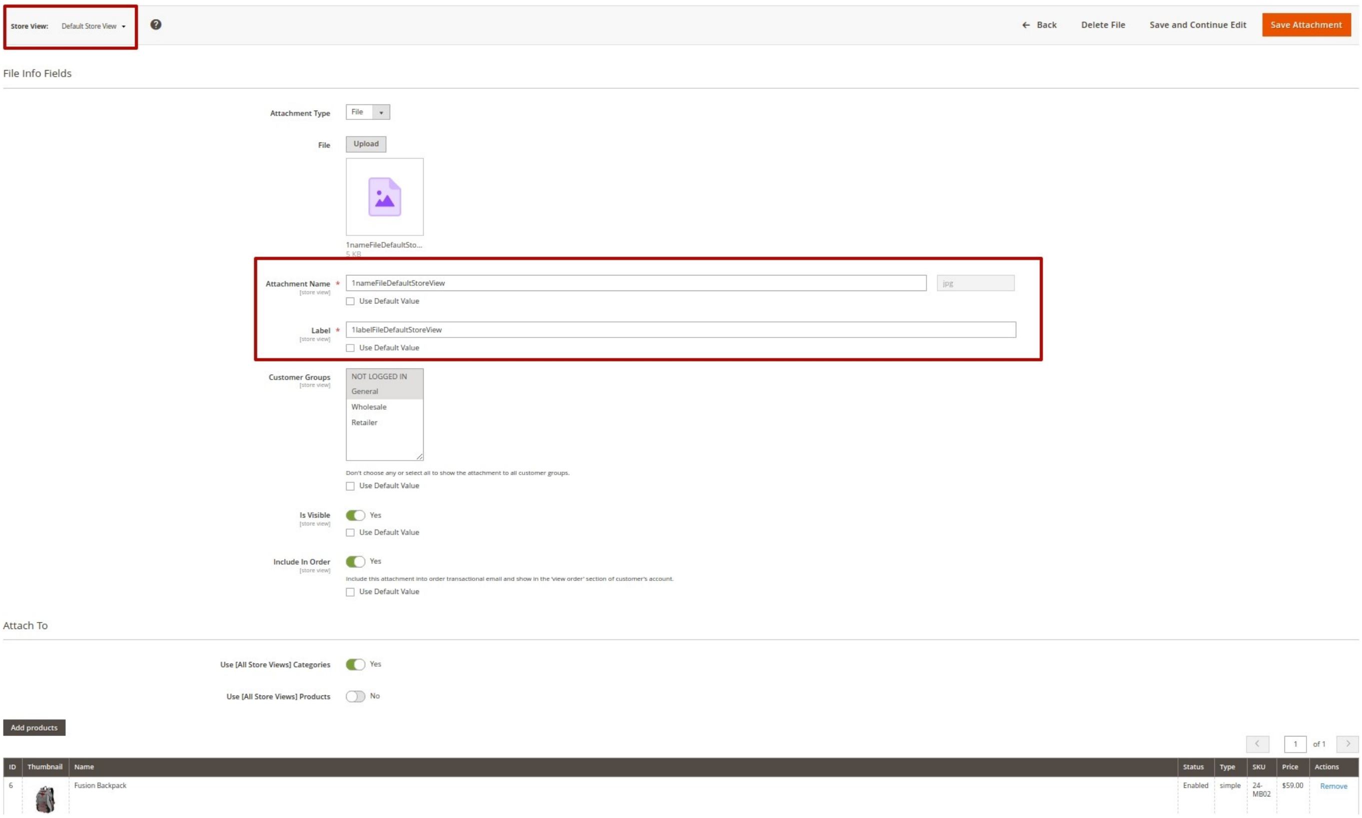
GET {{magento_api_url}}/Germany/V1/amasty_product_attachment/getByProductId?product_id=6

TYPE: Inherit auth from parent

The authorization header will be automatically generated when you send the request. Learn more about authorization

This request is using an authorization helper from collection Product Attachment Api.

There are 2 product attachments in the **Default Store View**:



Store View: Default Store View

File Info Fields

    }
]
```

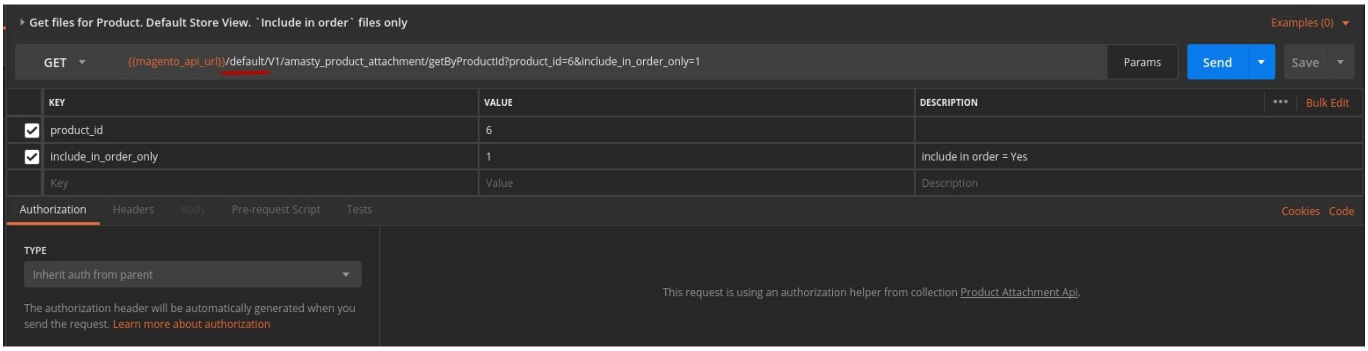
Get Files for Product Included in the Order

This query concerns products in the required Store View. On the frontend, these files are displayed on the *Order* page.

Use a **GET** query. In the URL, specify the needed **Store View**, in the **Params** section – **product_id**, and **include_in_order_only** condition: **1** (Yes):



Get files for Product. Default Store View. `Include in order` files only

GET {{magento_api_url}}/default/V1/amasty_product_attachment/getByProductId?product_id=6&include_in_order_only=1

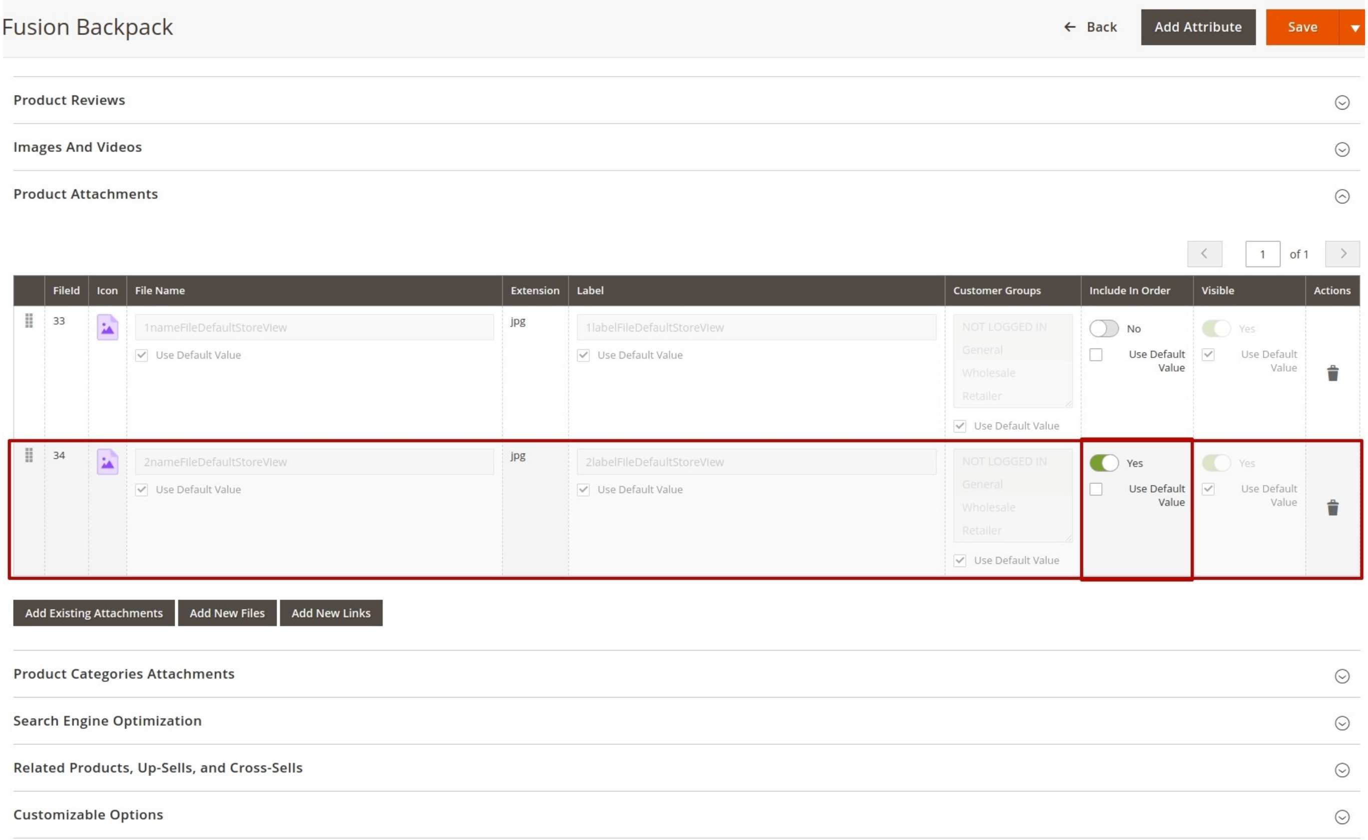
	KEY	VALUE	DESCRIPTION
☑	product_id	6	
☑	include_in_order_only	1	include in order = Yes
	Key	Value	Description

TYPE: Inherit auth from parent

The authorization header will be automatically generated when you send the request. Learn more about authorization

This request is using an authorization helper from collection Product Attachment Api.

As we see, the product with ID=6 in Default Store View has 2 attached files, and *Include In Order* condition is met only in the second case:



Fusion Backpack

Product Reviews

Images And Videos

Product Attachments

	FileId	Icon	File Name	Extension	Label	Customer Groups	Include In Order	Visible	Actions

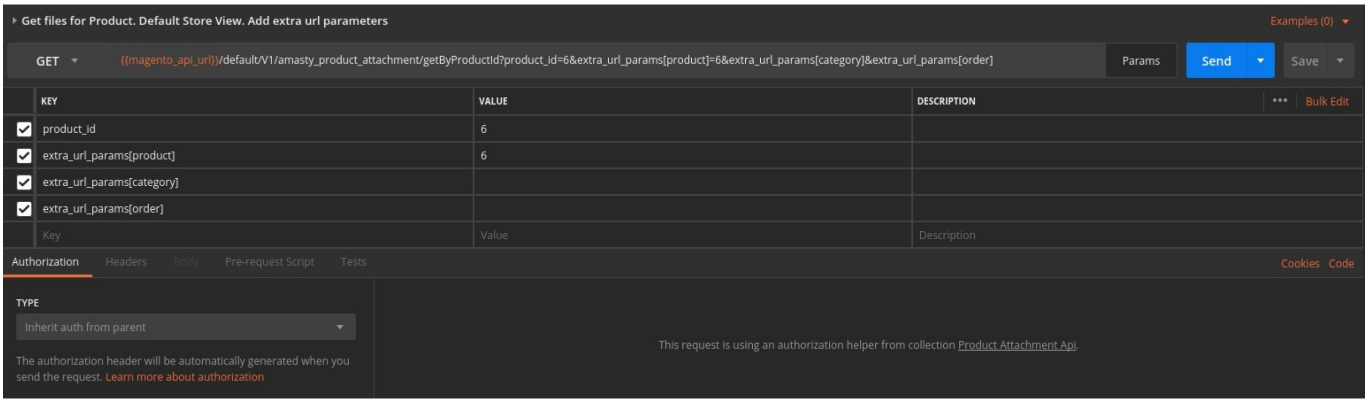
[
    {
        "mime_type": "image/jpeg",
        "file_size": 4793,
        "file_name": "2nameFileDefaultStoreView",
        "label": "2labelFileDefaultStoreView",
        "icon_url": "http://apimagento.gabrusevich.ap71.sty/pub/media/amasty/amfile/icon/Image.png",
        "url": "http://apimagento.gabrusevich.ap71.sty/amfile/file/download/file/34/"
    }
]
```

Get Files with Extra URL Parameters

Now we are going to consider the case when outputting the info on attachments in the necessary Store View needs adding extra parameters to the URL (category, product, order).

As usual, **GET** query is used.

In the URL, we write the Store View, the ID and the necessary parameters:



Get files for Product. Default Store View. Add extra url parameters

GET {{magento_api_url}}/default/V1/amasty_product_attachment/getByProductId?product_id=6&extra_url_params[product]=6&extra_url_params[category]&extra_url_params[order]

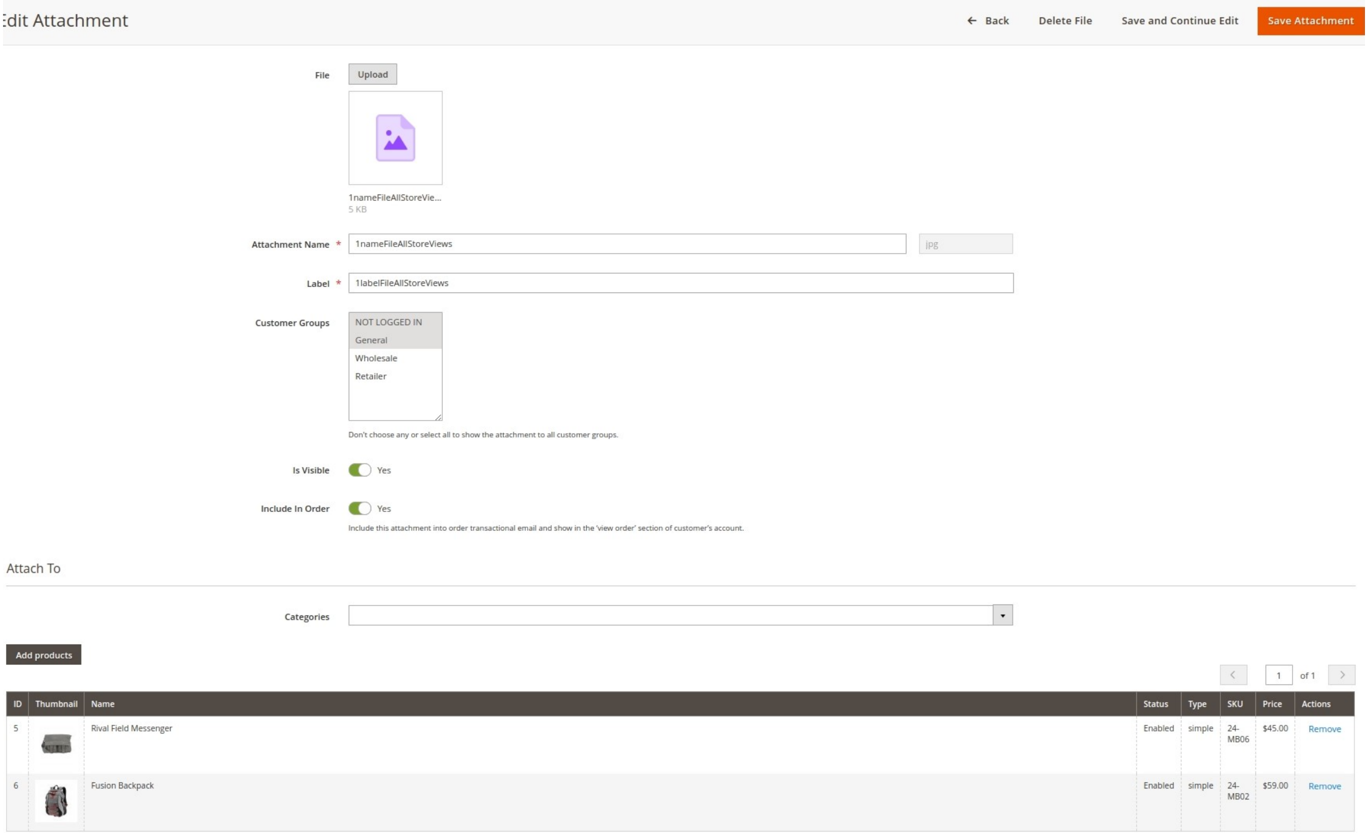
	KEY	VALUE	DESCRIPTION
☑	product_id	6	
☑	extra_url_params[product]	6	
☑	extra_url_params[category]		
☑	extra_url_params[order]		
	Key	Value	Description

TYPE: Inherit auth from parent

The authorization header will be automatically generated when you send the request. Learn more about authorization

This request is using an authorization helper from collection Product Attachment Api.

This file relates to 2 products:



File: 1nameFileAllStoreVie... 5 KB

Attachment Name * 1nameFileAllStoreViews jpg

Label * 1labelFileAllStoreViews

Customer Groups: NOT LOGGED IN, General, Wholesale, Retailer

Don't choose any or select all to show the attachment to all customer groups.

Is Visible: Yes

Include In Order: Yes

Include this attachment into order transactional email and show in the 'view order' section of customer's account.

Attach To

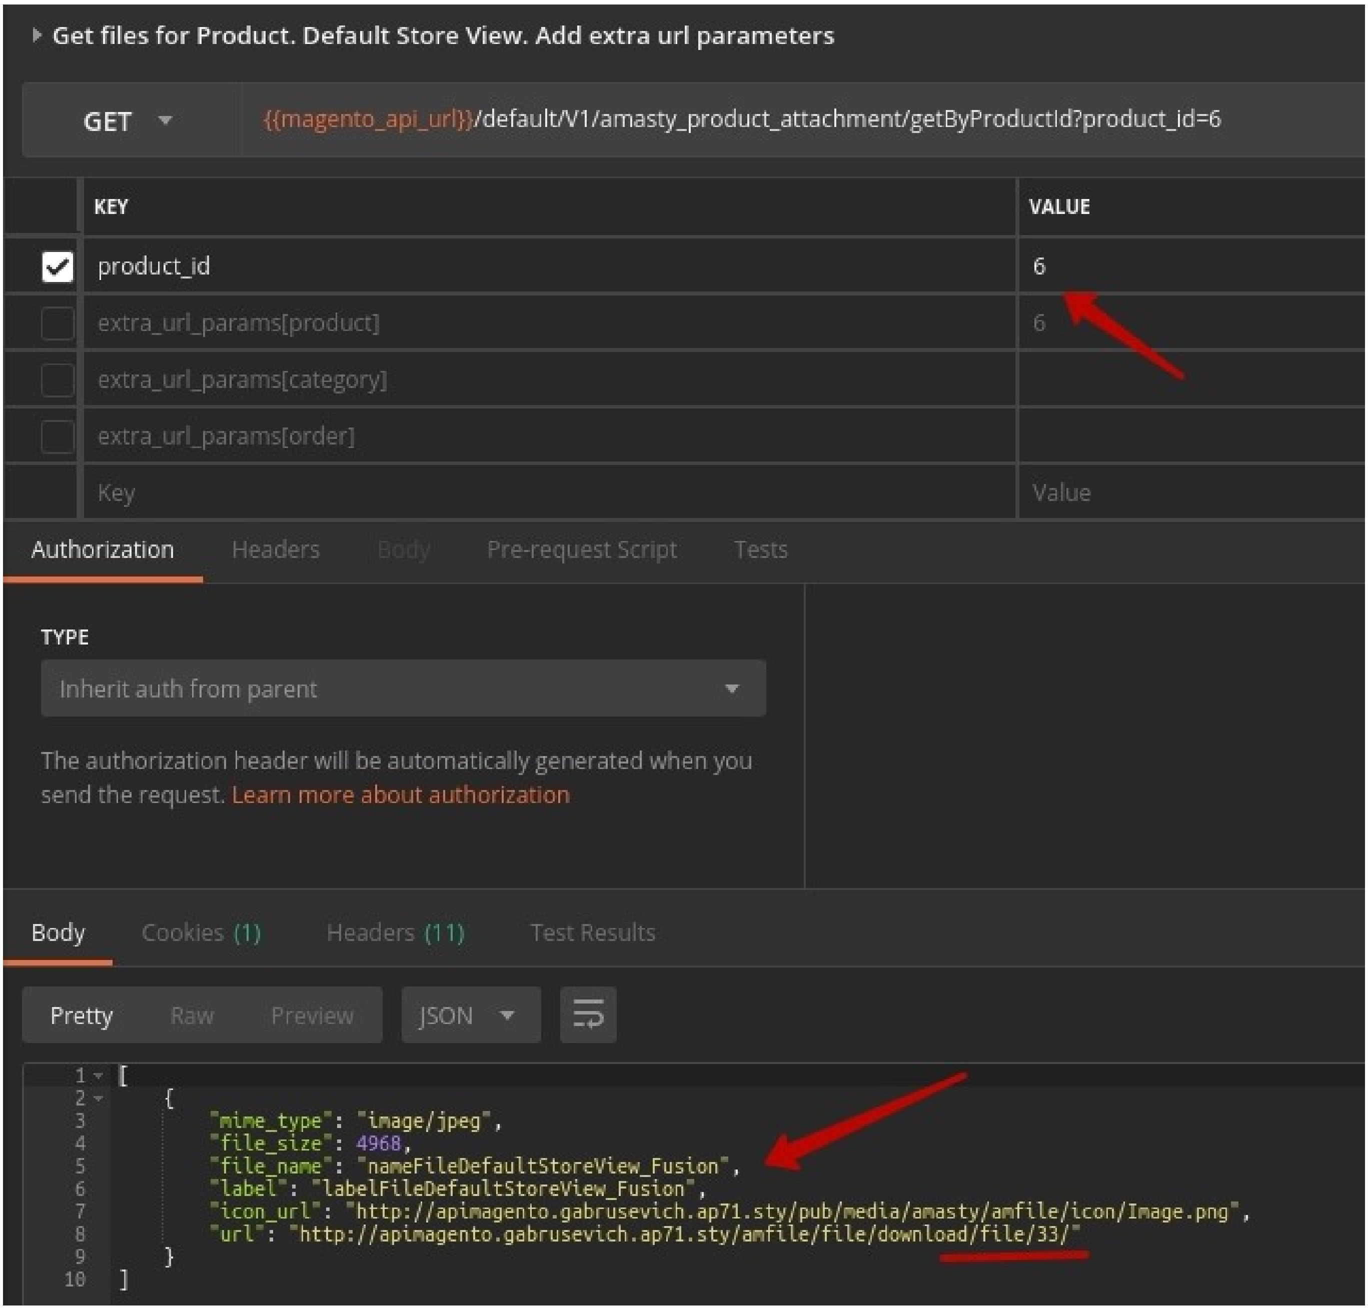
In Postman, if we make queries to extract the info on the attachment using the product ID only, the URL will be the same for each item:



Get files for Product. Default Store View. Add extra url parameters

GET {{magento_api_url}}/default/V1/amasty_product_attachment/getByProductId?product_id=6

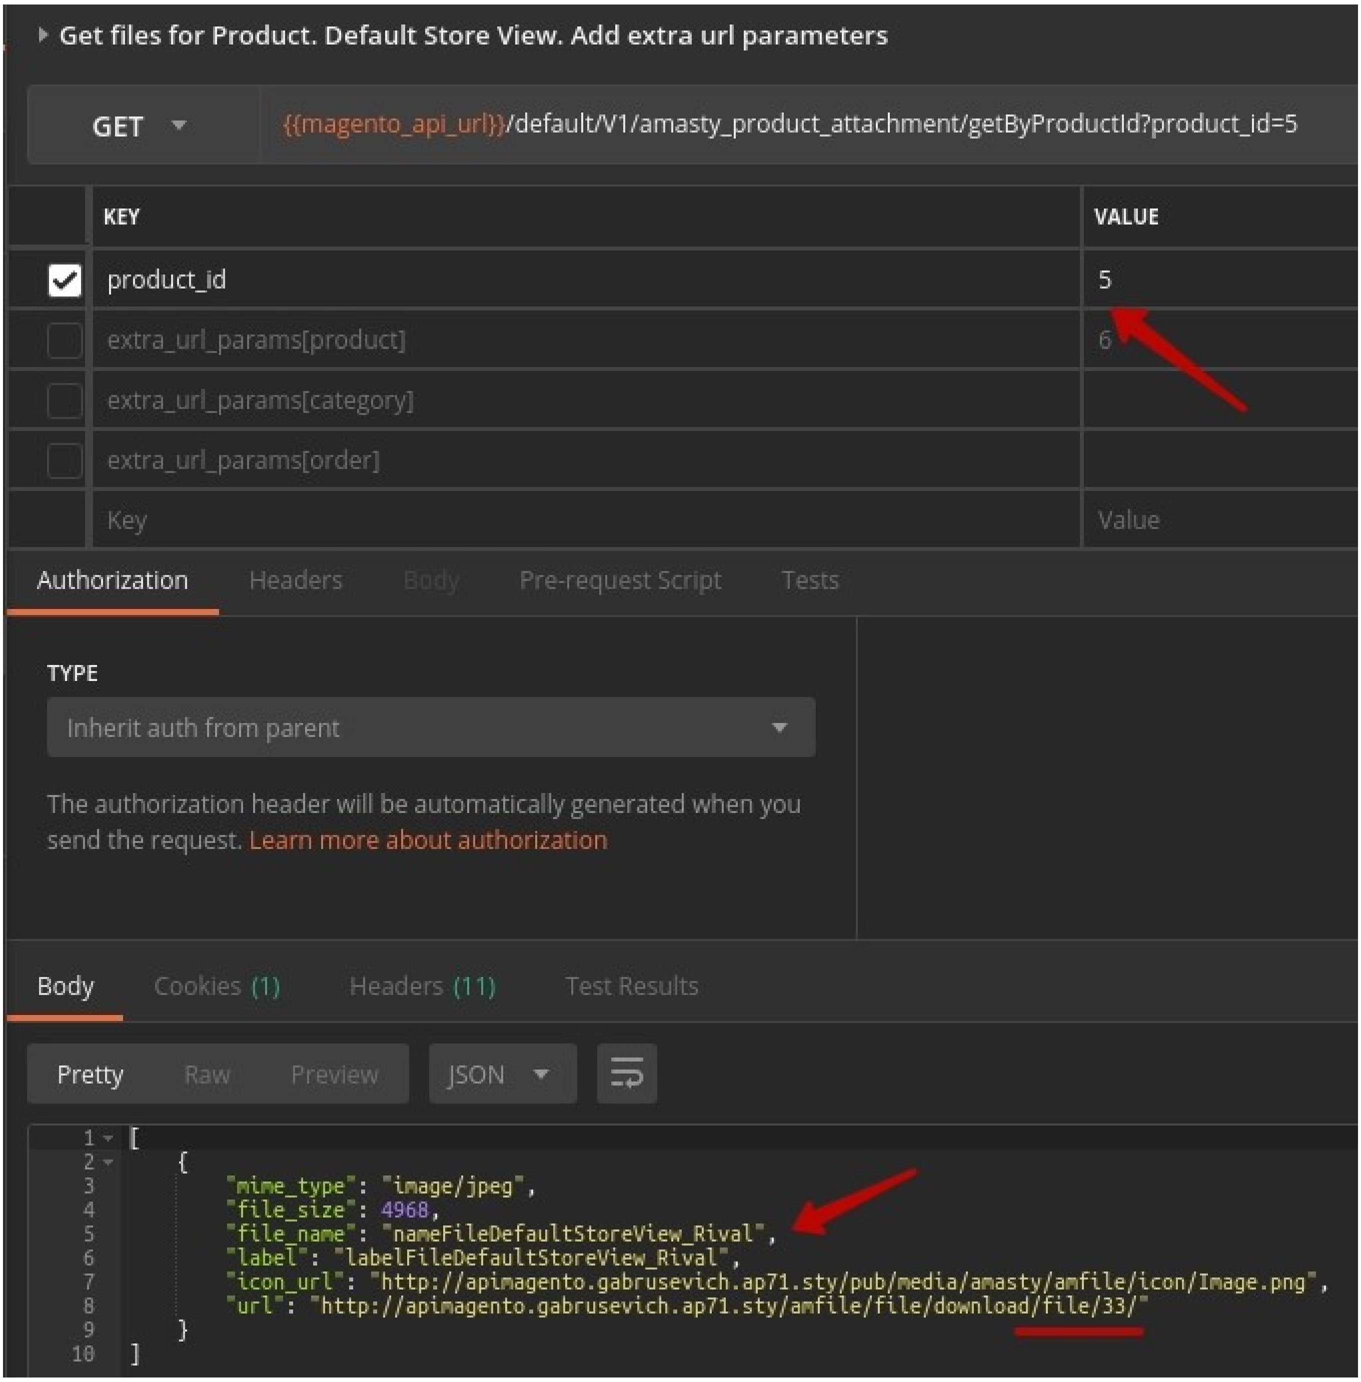
	KEY	VALUE
☑	product_id	6
□	extra_url_params[product]	6
□	extra_url_params[category]	
□	extra_url_params[order]	
	Key	Value

TYPE

Inherit auth from parent

The authorization header will be automatically generated when you send the request. Learn more about authorization

```
[
    {
        "mime_type": "image/jpeg",
        "file_size": 4968,
        "file_name": "nameFileDefaultStoreView_Fusion",
        "label": "labelFileDefaultStoreView_Fusion",
        "icon_url": "http://apimagento.gabrusevich.ap71.sty/pub/media/amasty/amfile/icon/Image.png",
        "url": "http://apimagento.gabrusevich.ap71.sty/amfile/file/download/file/33/"
    }
]
```



Get files for Product. Default Store View. Add extra url parameters

GET {{magento_api_url}}/default/V1/amasty_product_attachment/getByProductId?product_id=5

	KEY	VALUE
☑	product_id	5
□	extra_url_params[product]	6
□	extra_url_params[category]	
□	extra_url_params[order]	
	Key	Value

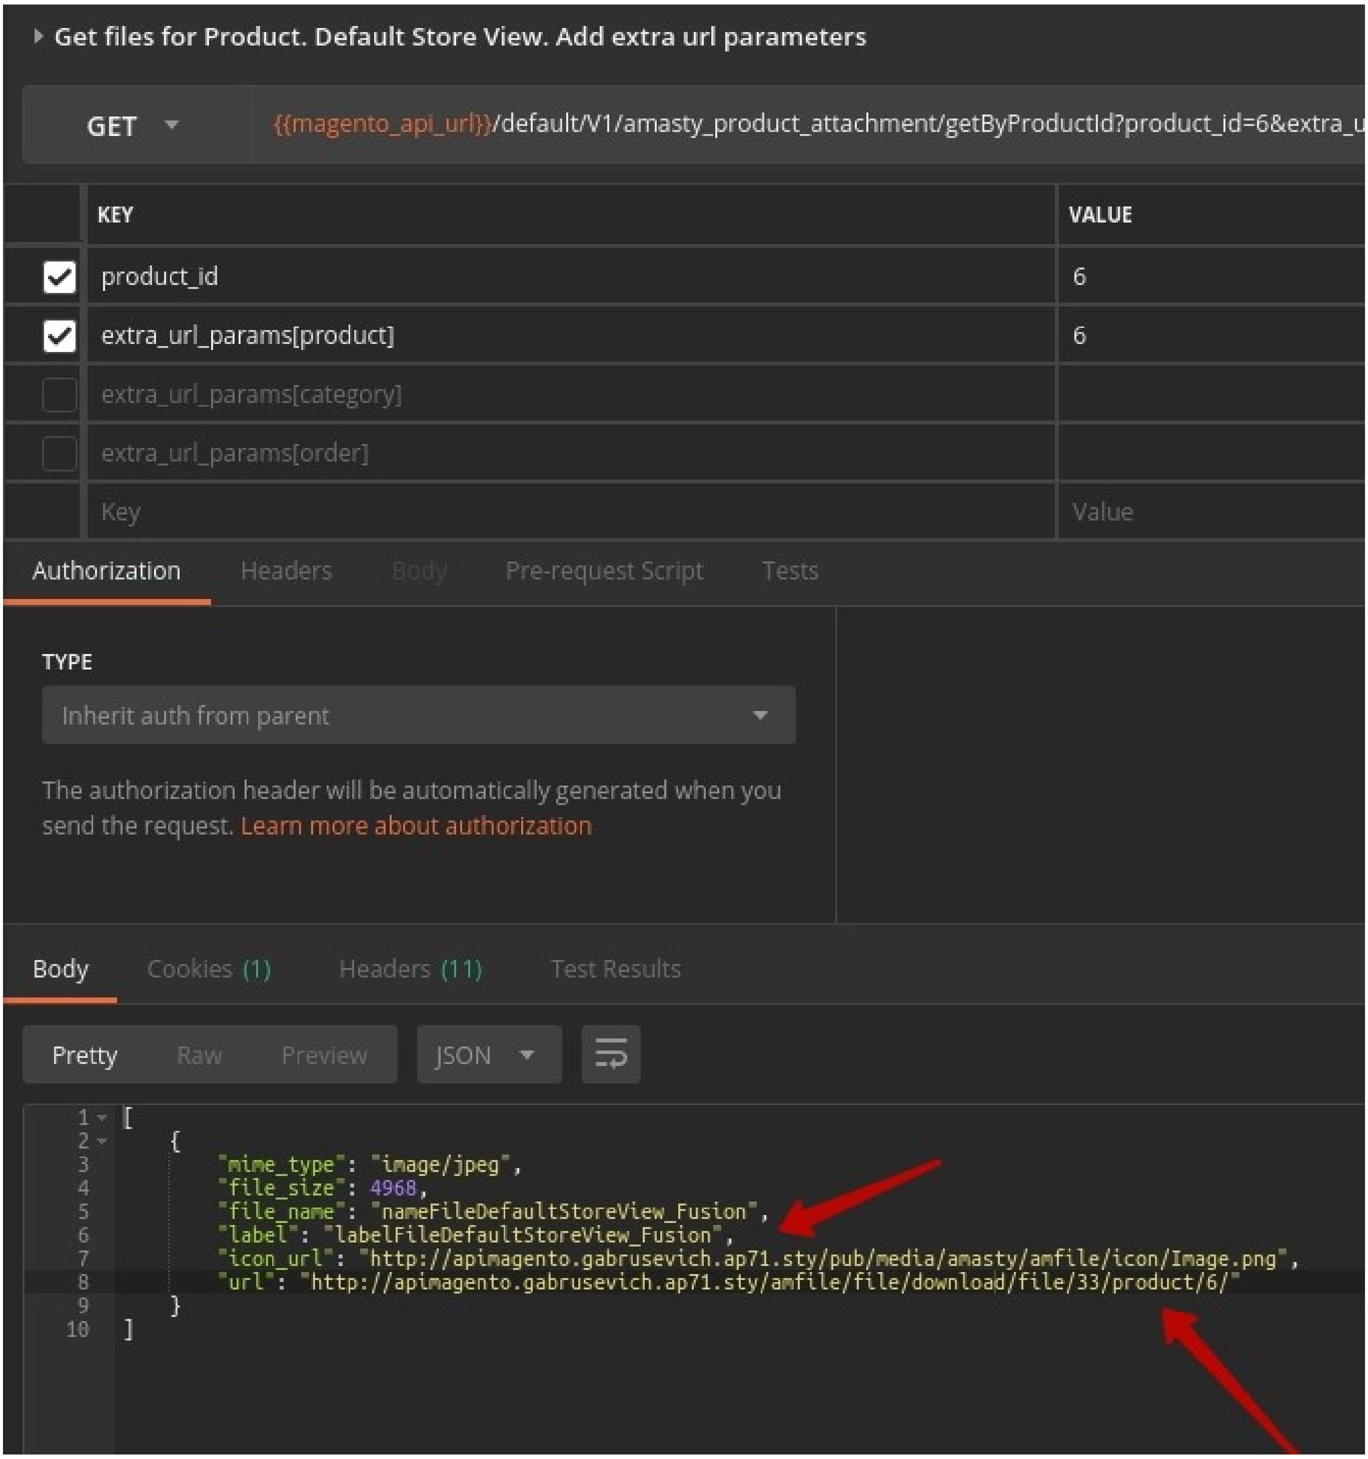
TYPE

Inherit auth from parent

The authorization header will be automatically generated when you send the request. Learn more about authorization

```
[
    {
        "mime_type": "image/jpeg",
        "file_size": 4968,
        "file_name": "nameFileDefaultStoreView_Rival",
        "label": "labelFileDefaultStoreView_Rival",
        "icon_url": "http://apimagento.gabrusevich.ap71.sty/pub/media/amasty/amfile/icon/Image.png",
        "url": "http://apimagento.gabrusevich.ap71.sty/amfile/file/download/file/33/"
    }
]
```

The main benefit of extra URL parameter is that we get one file with different settings for each product:



Get files for Product. Default Store View. Add extra url parameters

GET {{magento_api_url}}/default/V1/amasty_product_attachment/getByProductId?product_id=6&extra_u

	KEY	VALUE
☑	product_id	6

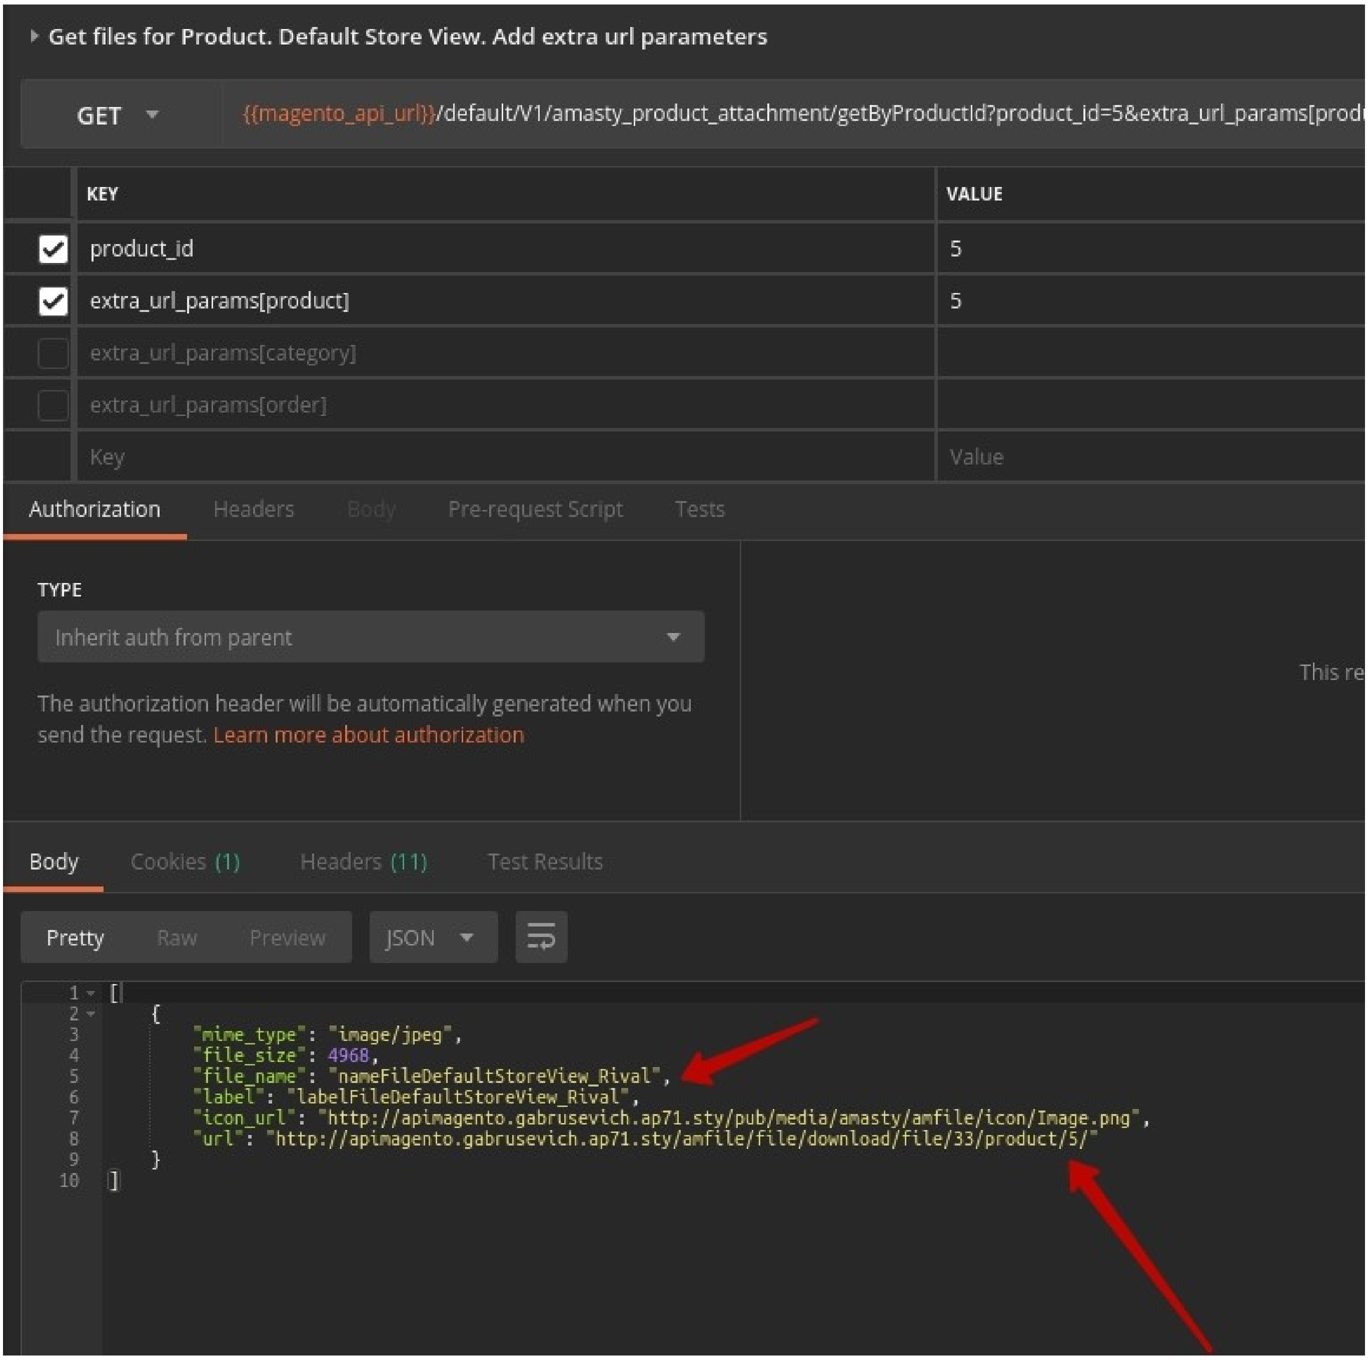
        "file_name": "nameFileDefaultStoreView_Fusion",
        "label": "labelFileDefaultStoreView_Fusion",
        "icon_url": "http://apimagento.gabrusevich.ap71.sty/pub/media/amasty/amfile/icon/Image.png",
        "url": "http://apimagento.gabrusevich.ap71.sty/amfile/file/download/file/33/product/6/"
    }
]
```



Get files for Product. Default Store View. Add extra url parameters

GET {{magento_api_url}}/default/V1/amasty_product_attachment/getByProductId?product_id=5&extra_url_params[prod

	KEY	VALUE
☑	product_id	5
☑	extra_url_params[product]	5
□	extra_url_params[category]	
□	extra_url_params[order]	
	Key	Value

TYPE

Inherit auth from parent

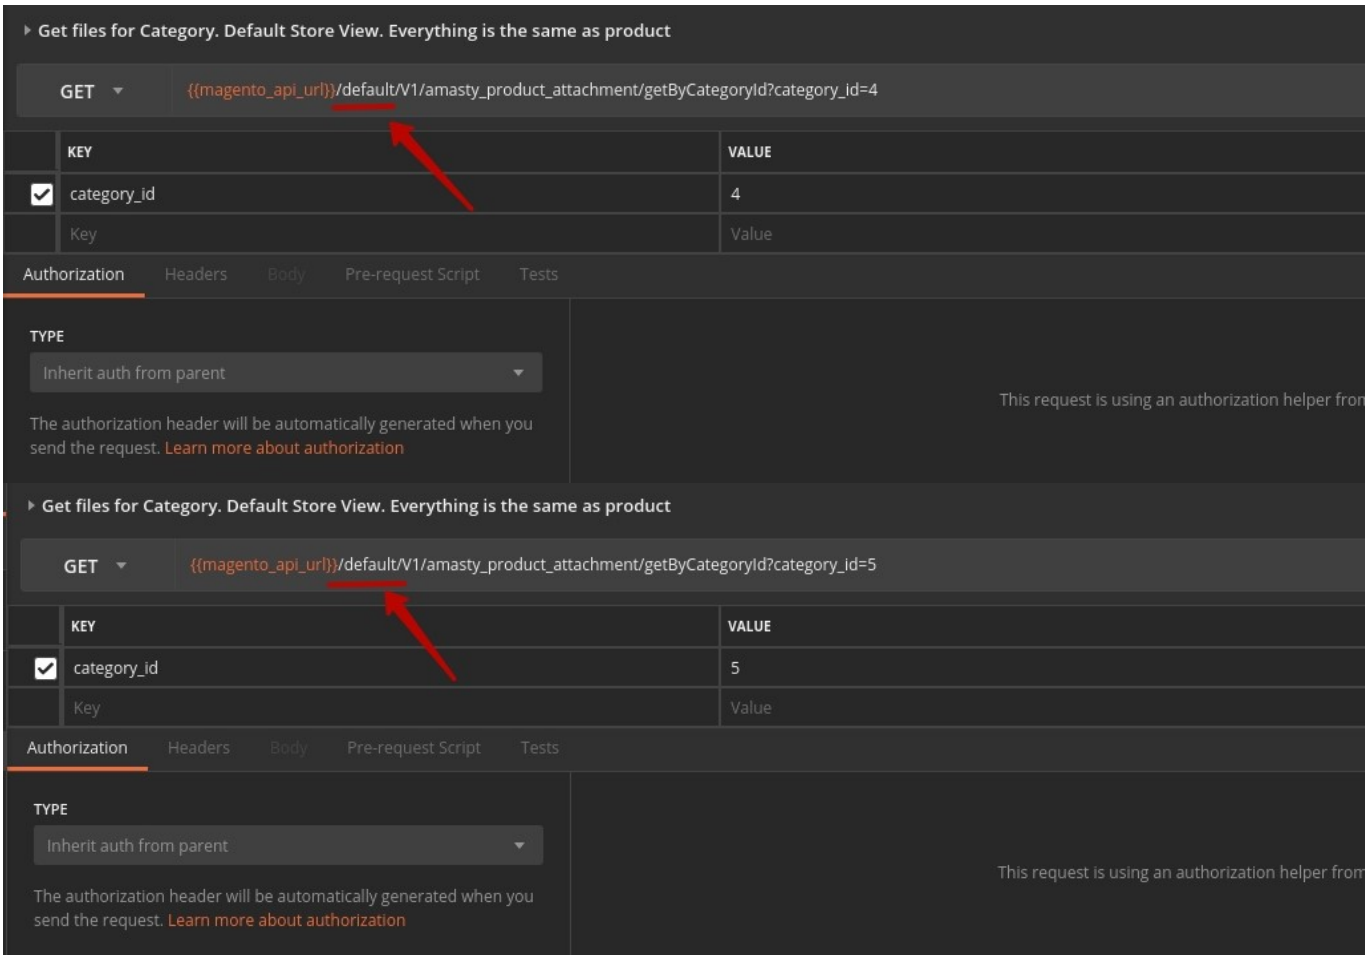
The authorization header will be automatically generated when you send the request. Learn more about authorization

```
[
    {
        "mime_type": "image/jpeg",
        "file_size": 4968,
        "file_name": "nameFileDefaultStoreView_Rival",
        "label": "labelFileDefaultStoreView_Rival",
        "icon_url": "http://apimagento.gabrusevich.ap71.sty/pub/media/amasty/amfile/icon/Image.png",
        "url": "http://apimagento.gabrusevich.ap71.sty/amfile/file/download/file/33/product/5/"
    }
]
```

Another option of Product Attachments is that users can also output or view the data on the files attached to the whole category.

Get Files for Categories

Now let's output the information on the files attached to a Category of the necessary Store View, using **GET** request. The store view is Default:



Get files for Category. Default Store View. Everything is the same as product

GET {{magento_api_url}}/default/V1/amasty_product_attachment/getByCategoryId?category_id=4

	KEY	VALUE
☑	category_id	4
	Key	Value

TYPE: Inherit auth from parent

The authorization header will be automatically generated when you send the request. Learn more about authorization

This request is using an authorization helper fron

Get files for Category. Default Store View. Everything is the same as product

GET {{magento_api_url}}/default/V1/amasty_product_attachment/getByCategoryId?category_id=5

	KEY	VALUE
☑	category_id	5
	Key	Value

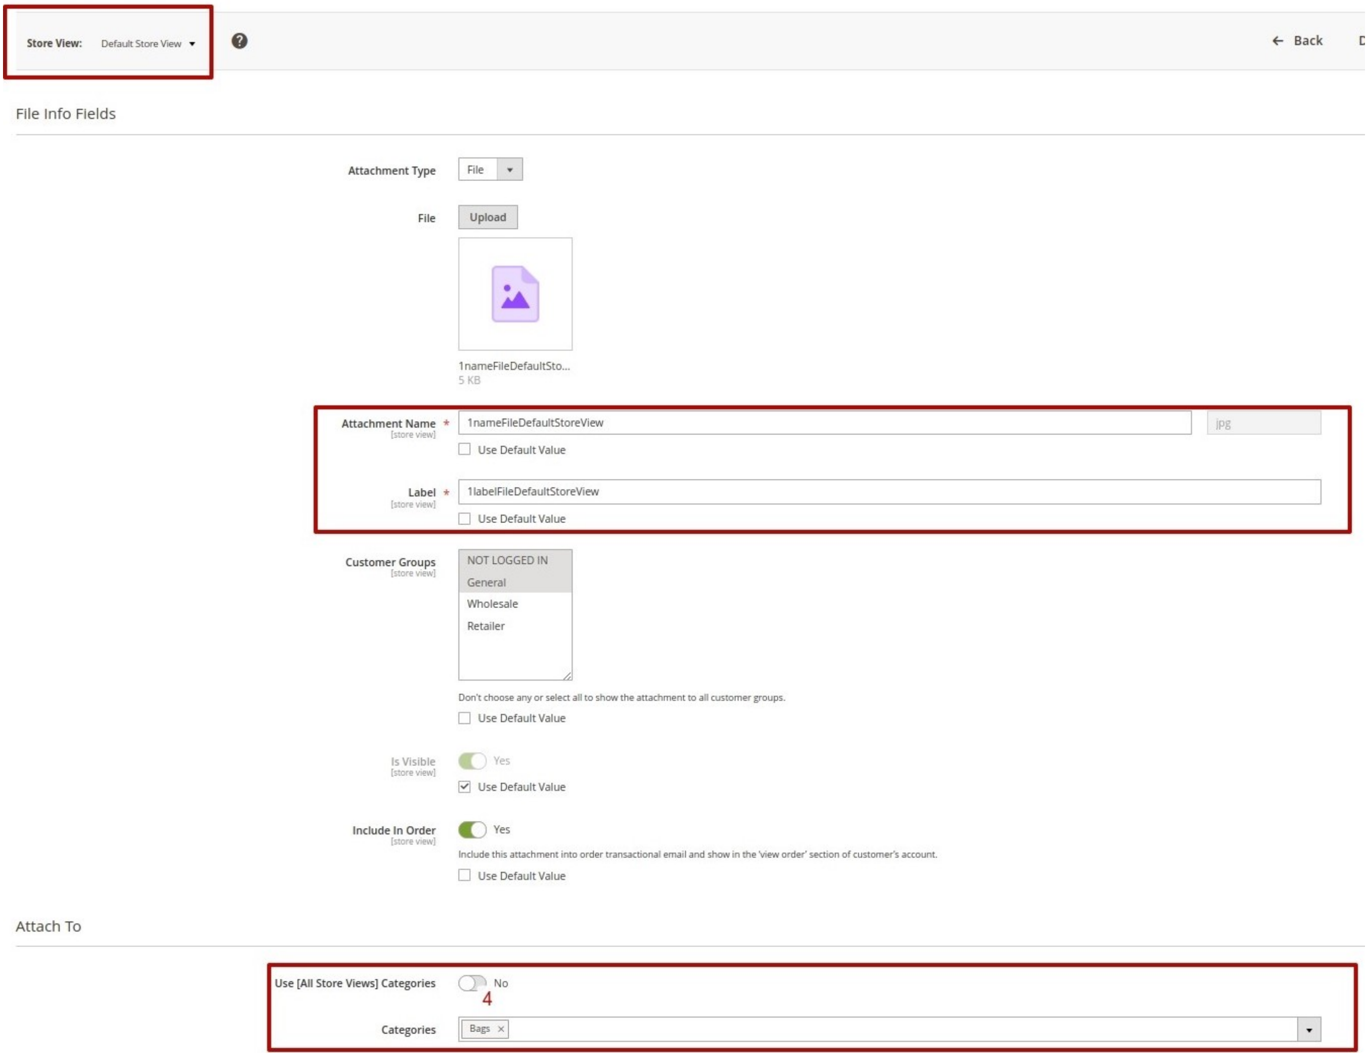
TYPE: Inherit auth from parent

The authorization header will be automatically generated when you send the request. Learn more about authorization

This request is using an authorization helper from

In the URL, specify the Store View and the ID of the categories we aim to extract file info from. Here are the expected results based on the module configuration:

- File 1 is attached to the ID 4 category:



Store View: Default Store View

File Info Fields

Attachment Type: File

File: Upload

1nameFileDefaultSto...
5 KB

Attachment Name * [store view]: 1nameFileDefaultStoreView jpg

□ Use Default Value

Label * [store view]: 1labelFileDefaultStoreView

□ Use Default Value

Customer Groups [store view]: NOT LOGGED IN, General, Wholesale, Retailer

Don't choose any or select all to show the attachment to all customer groups.

□ Use Default Value

Is Visible [store view]: Yes

☑ Use Default Value

Include In Order [store view]: Yes

Include this attachment into order transactional email and show in the 'view order' section of customer's account.

□ Use Default Value

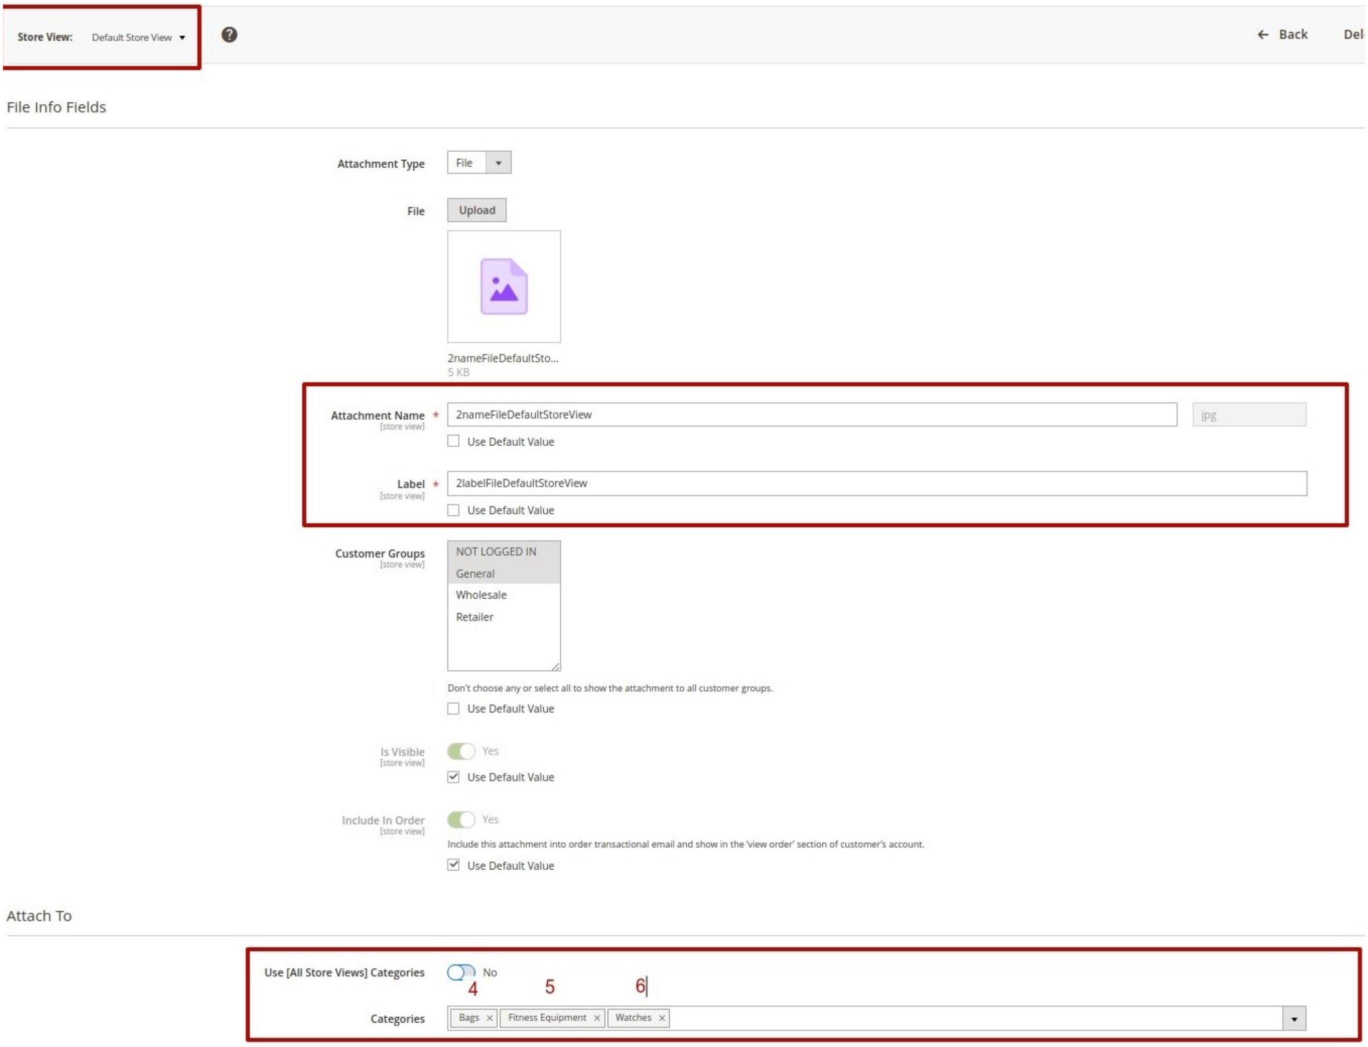
Attach To

Use [All Store Views] Categories: No

4

Categories: Bags ×

- File 2 is attached to the ID=4,5,6 categories:



Store View: Default Store View

← Back Del

File Info Fields

Attachment Type: File

File: Upload

2nameFileDefaultSto...
5 KB

Attachment Name * [store view]: 2nameFileDefaultStoreView jpg
☐ Use Default Value

Label * [store view]: 2labelFileDefaultStoreView
☐ Use Default Value

Customer Groups [store view]: NOT LOGGED IN, General, Wholesale, Retailer
Don't choose any or select all to show the attachment to all customer groups.
☐ Use Default Value

Is Visible [store view]: Yes
☑ Use Default Value

Include In Order [store view]: Yes
Include this attachment into order transactional email and show in the 'view order' section of customer's account.
☑ Use Default Value

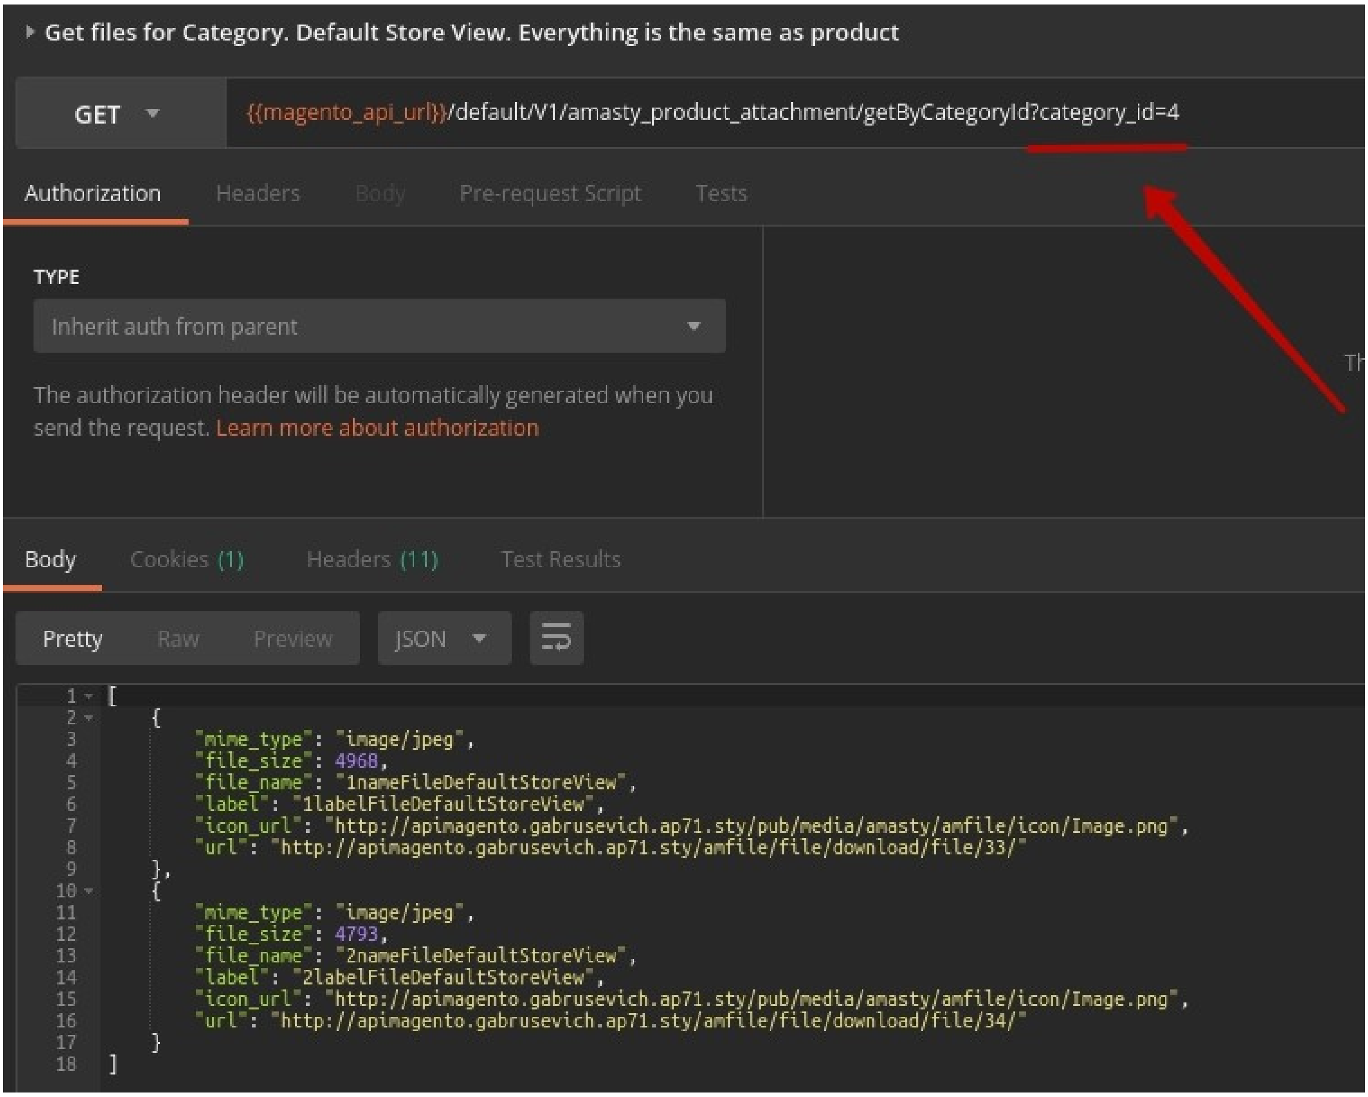
Attach To

Use [All Store Views] Categories: No

Categories: Bags × Fitness Equipment × Watches ×

Now we should check how the info is rendered in Postman:

- ID 4 Category:



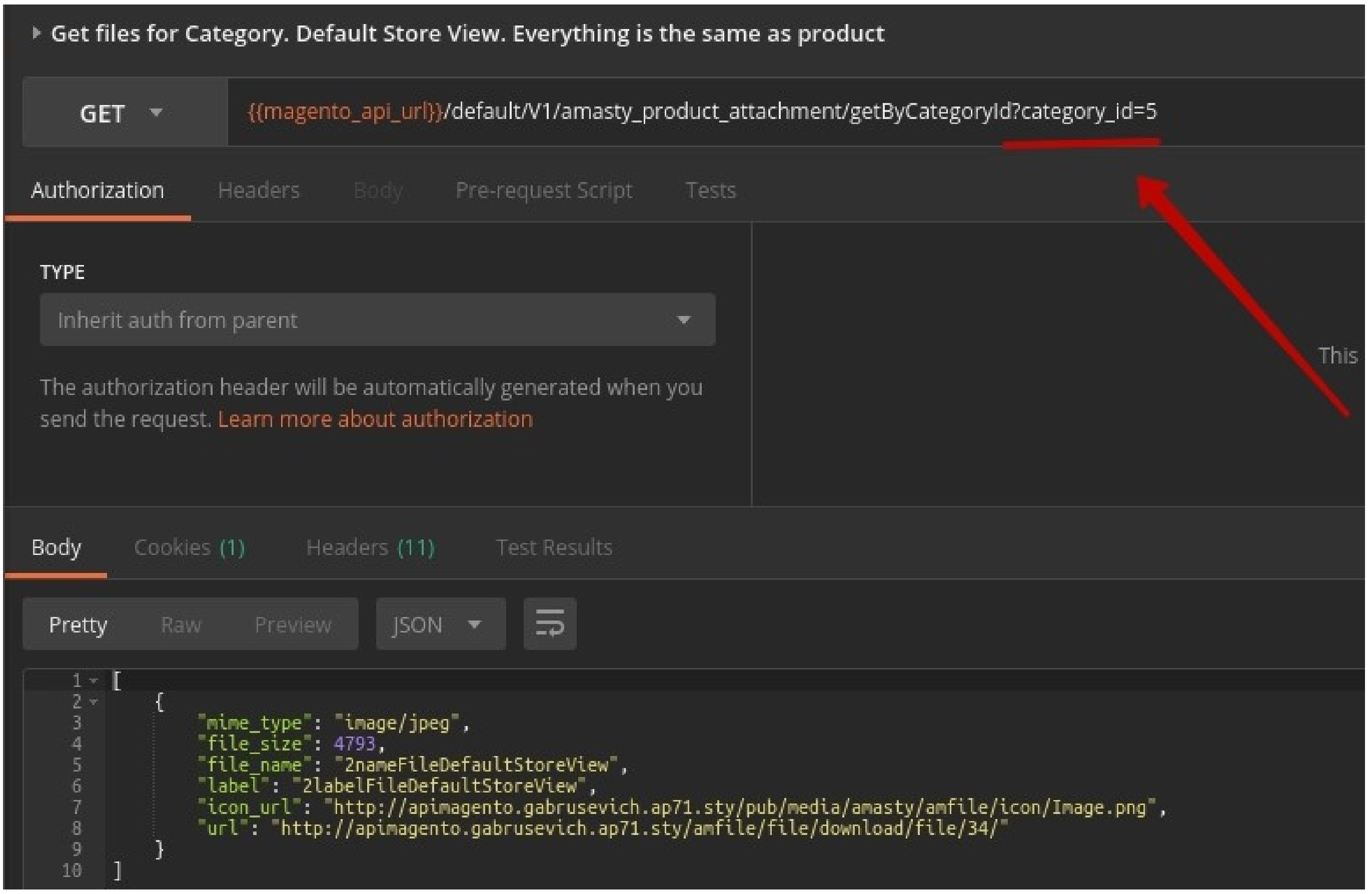
Get files for Category. Default Store View. Everything is the same as product

GET {{magento_api_url}}/default/V1/amasty_product_attachment/getByCategoryId?category_id=4

The authorization header will be automatically generated when you send the request. Learn more about authorization

```
[
    {
        "mime_type": "image/jpeg",
        "file_size": 4968,
        "file_name": "1nameFileDefaultStoreView",
        "label": "1labelFileDefaultStoreView",
        "icon_url": "http://apimagento.gabrusevich.ap71.sty/pub/media/amasty/amfile/icon/Image.png",
        "url": "http://apimagento.gabrusevich.ap71.sty/amfile/file/download/file/33/"
    },
    {
        "mime_type": "image/jpeg",
        "file_size": 4793,
        "file_name": "2nameFileDefaultStoreView",
        "label": "2labelFileDefaultStoreView",
        "icon_url": "http://apimagento.gabrusevich.ap71.sty/pub/media/amasty/amfile/icon/Image.png",
        "url": "http://apimagento.gabrusevich.ap71.sty/amfile/file/download/file/34/"
    }
]
```

- ID 5 Category:



Get files for Category. Default Store View. Everything is the same as product

GET {{magento_api_url}}/default/V1/amasty_product_attachment/getByCategoryId?category_id=5

TYPE
Inherit auth from parent

The authorization header will be automatically generated when you send the request. Learn more about authorization

This

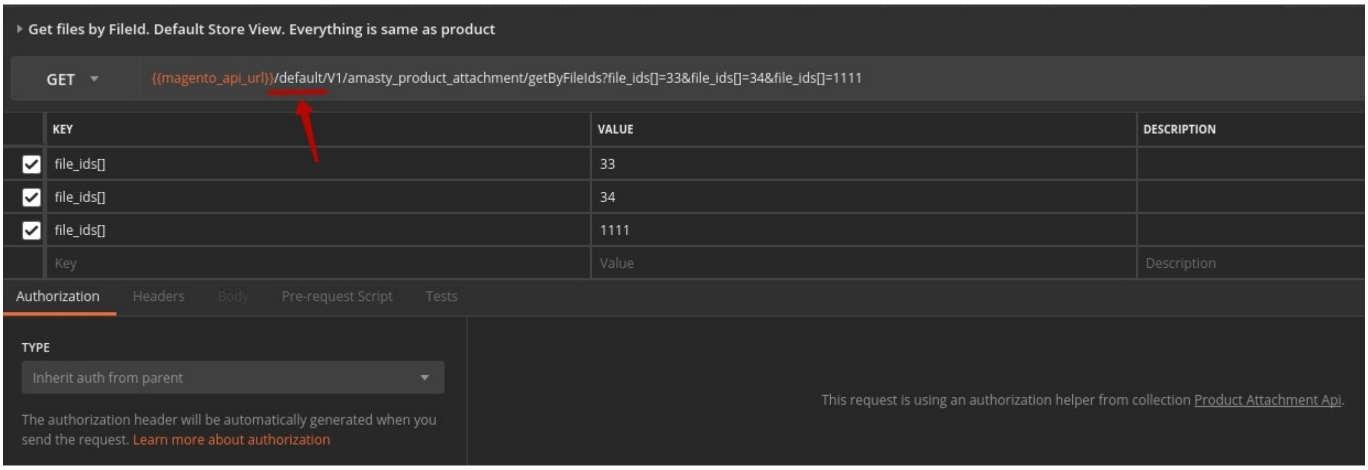
```
[
    {
        "mime_type": "image/jpeg",
        "file_size": 4793,
        "file_name": "2nameFileDefaultStoreView",
        "label": "2labelFileDefaultStoreView",
        "icon_url": "http://apimagento.gabrusevich.ap71.sty/pub/media/amasty/amfile/icon/Image.png",
        "url": "http://apimagento.gabrusevich.ap71.sty/amfile/file/download/file/34/"
    }
]
```

We see that there are 2 attachments in the ID 4 category and only one attachment in ID 5 category. This matches the module settings and the info is correct.

Get Files by File ID

In this case, we are going to extract the file info for the Default Store View, relying on the file ID.

As usual, in the URL, we fill in the Store View and the file IDs – in the **Params** section:



Get files by FileId. Default Store View. Everything is same as product

GET {{magento_api_url}}/default/V1/amasty_product_attachment/getByFileIds?file_ids[]=33&file_ids[]=34&file_ids[]=1111

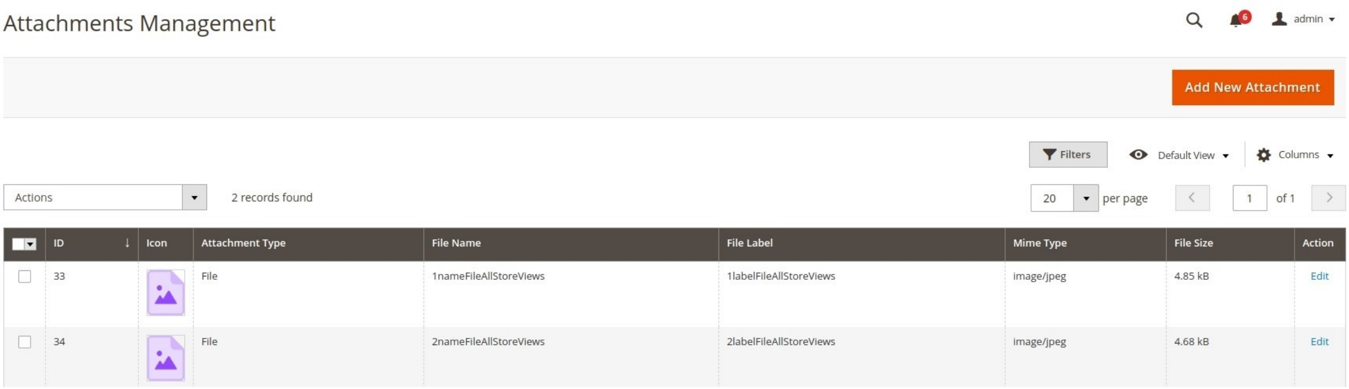
	KEY	VALUE	DESCRIPTION
☑	file_ids[]	33	
☑	file_ids[]	34	
☑	file_ids[]	1111	
	Key	Value	Description

TYPE
Inherit auth from parent

The authorization header will be automatically generated when you send the request. Learn more about authorization

This request is using an authorization helper from collection Product Attachment Api.

In our example we see 2 uploaded files:



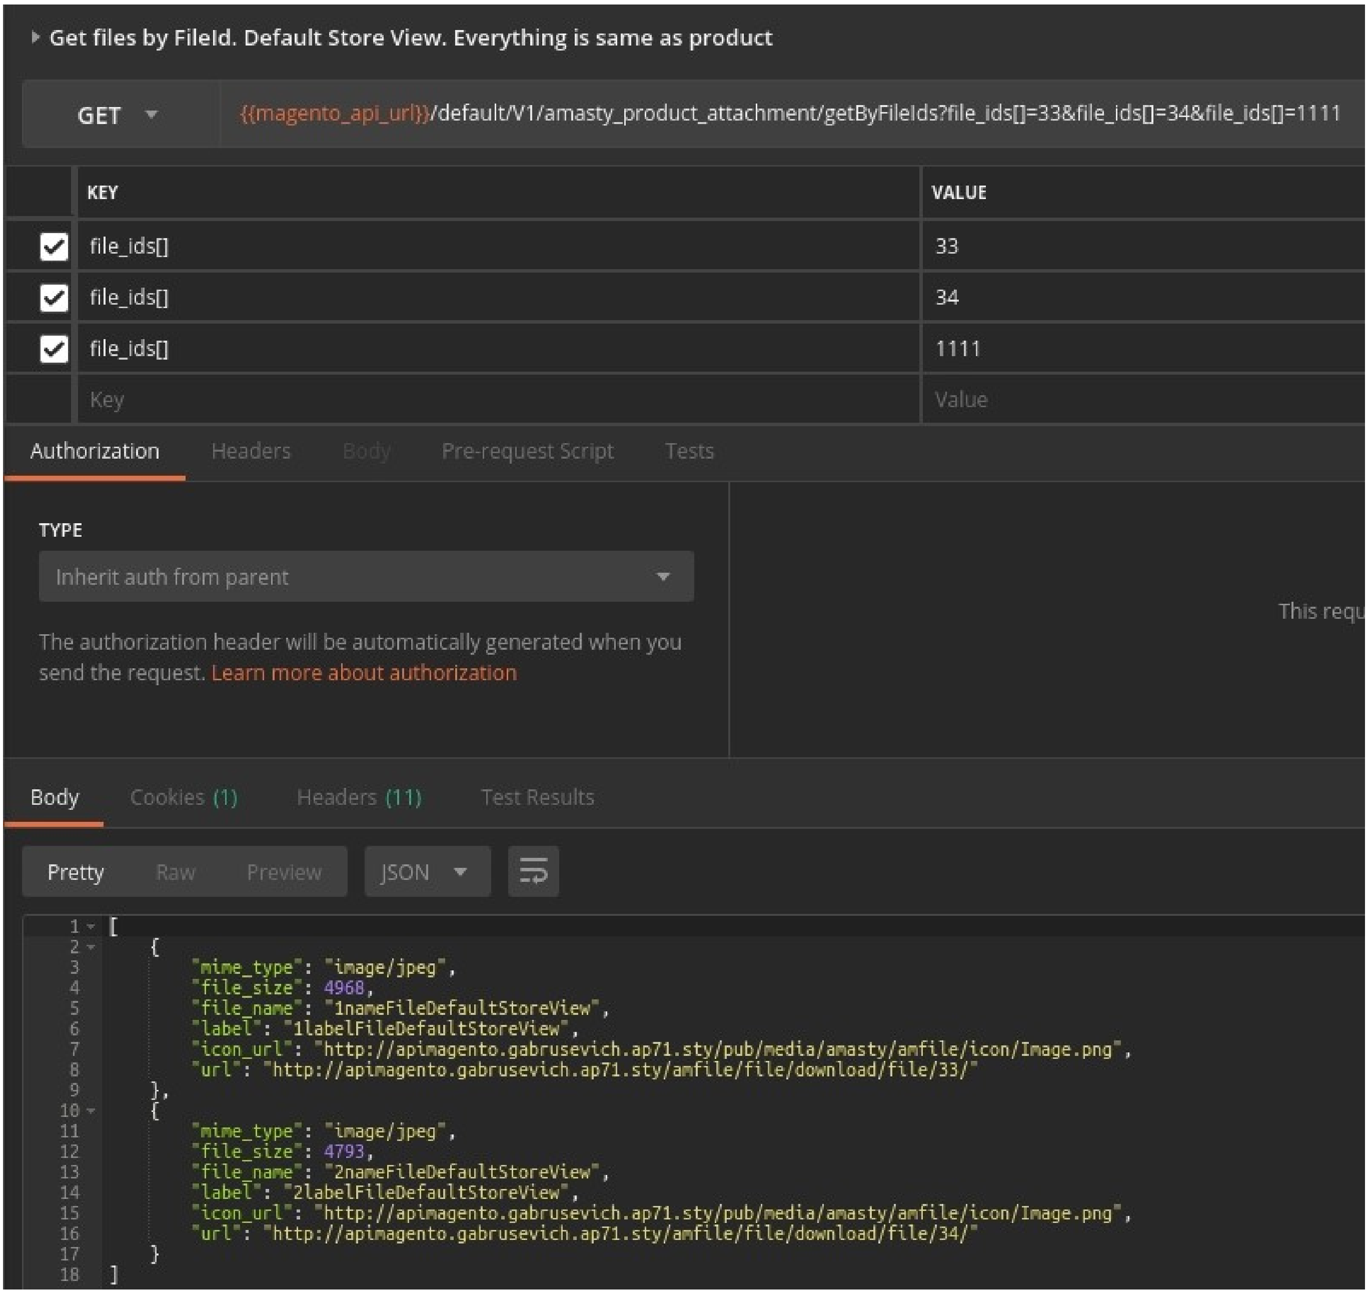
Attachments Management

2 records found

20 per page 1 of 1

ID	Icon	Attachment Type	File Name	File Label	Mime Type	File Size	Action
33		File	1nameFileAllStoreViews	1labelFileAllStoreViews	image/jpeg	4.85 kB	Edit
34		File	2nameFileAllStoreViews	2labelFileAllStoreViews	image/jpeg	4.68 kB	Edit

The info is correct:



Get files by FileId. Default Store View. Everything is same as product

GET {{magento_api_url}}/default/V1/amasty_product_attachment/getByFileIds?file_ids[]=33&file_ids[]=34&file_ids[]=1111

	KEY	VALUE
☑	file_ids[]	33
☑	file_ids[]	34
☑	file_ids[]	1111
	Key	Value

TYPE

Inherit auth from parent

The authorization header will be automatically generated when you send the request. Learn more about authorization

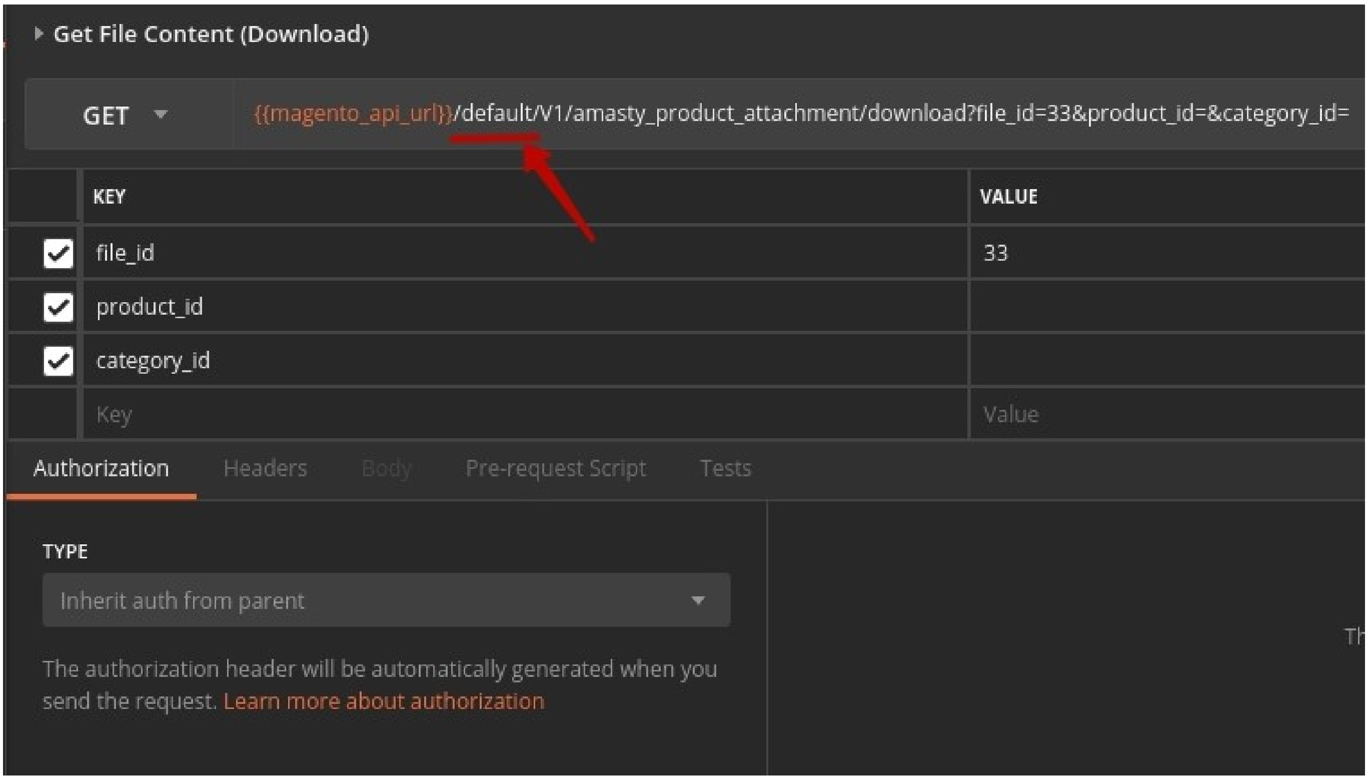
This requ

```
[
    {
        "mime_type": "image/jpeg",
        "file_size": 4968,
        "file_name": "1nameFileDefaultStoreView",
        "label": "1labelFileDefaultStoreView",
        "icon_url": "http://apimagento.gabrusevich.ap71.sty/pub/media/amasty/amfile/icon/Image.png",
        "url": "http://apimagento.gabrusevich.ap71.sty/amfile/file/download/file/33/"
    },
    {
        "mime_type": "image/jpeg",
        "file_size": 4793,
        "file_name": "2nameFileDefaultStoreView",
        "label": "2labelFileDefaultStoreView",
        "icon_url": "http://apimagento.gabrusevich.ap71.sty/pub/media/amasty/amfile/icon/Image.png",
        "url": "http://apimagento.gabrusevich.ap71.sty/amfile/file/download/file/34/"
    }
]
```

We have added the ID of a non-existing file (1111) on purpose. As you can see, Postman didn't report any error. The tool just output the existing files.

Test File Downloading

To do this, output the info in **Base64** format. Then copy the Base64 code and insert it into decoders to get the product picture. Use **GET** query to output the file data:



Get File Content (Download)

GET {{magento_api_url}}/default/V1/amasty_product_attachment/download?file_id=33&product_id=&category_id=

	KEY	VALUE
☑	file_id	33
☑	product_id	
☑	category_id	
	Key	Value

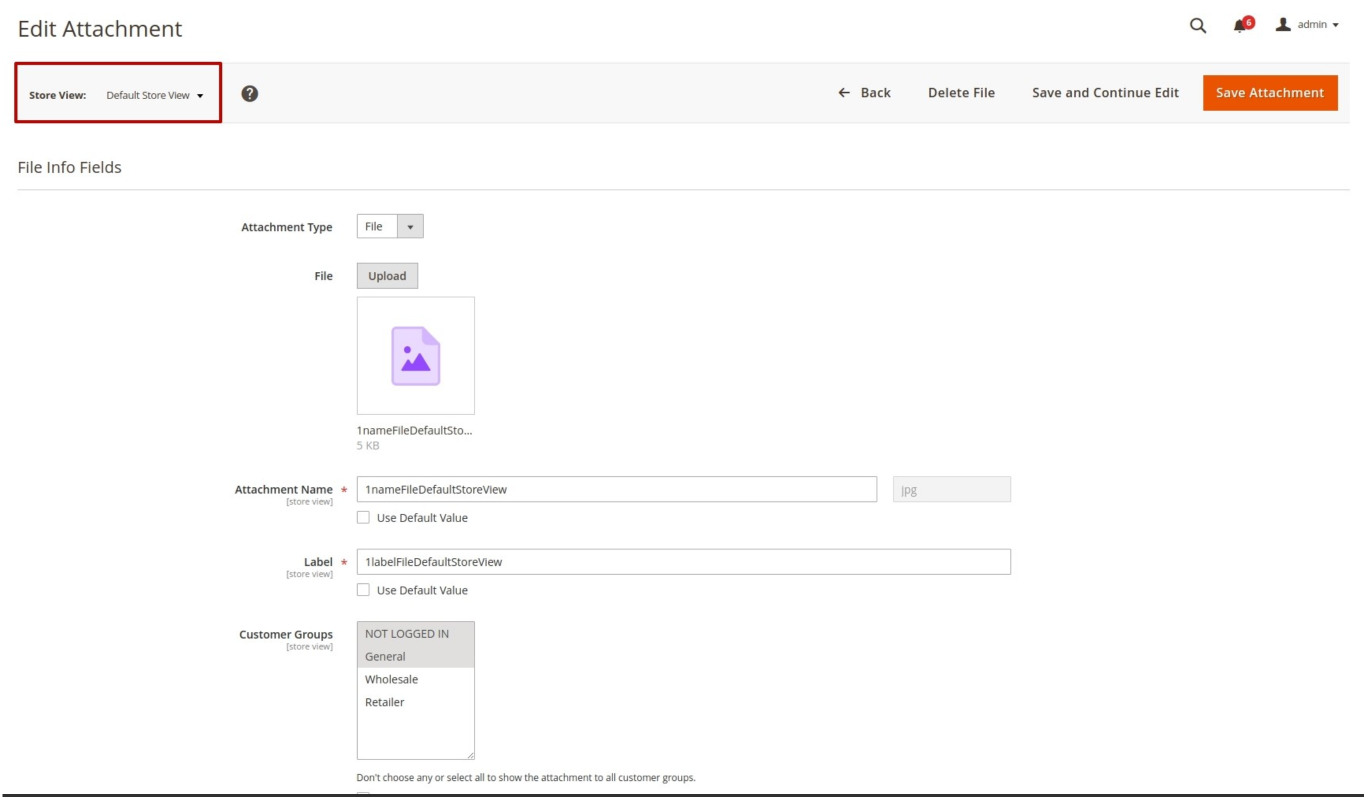
TYPE: Inherit auth from parent

The authorization header will be automatically generated when you send the request. Learn more about authorization

In the URL input the necessary **Store View**, in the **Params** section – the **file/product/category ID**.

There are several ways to get the file content. We provide the file settings in the module settings and their representation in Postman.

- Using the file ID:



File Info Fields

Attachment Type: File

File: 1nameFileDefaultSto... 5 KB

Attachment Name * [store view]: 1nameFileDefaultStoreView | jpg

□ Use Default Value

Label * [store view]: 1labelFileDefaultStoreView

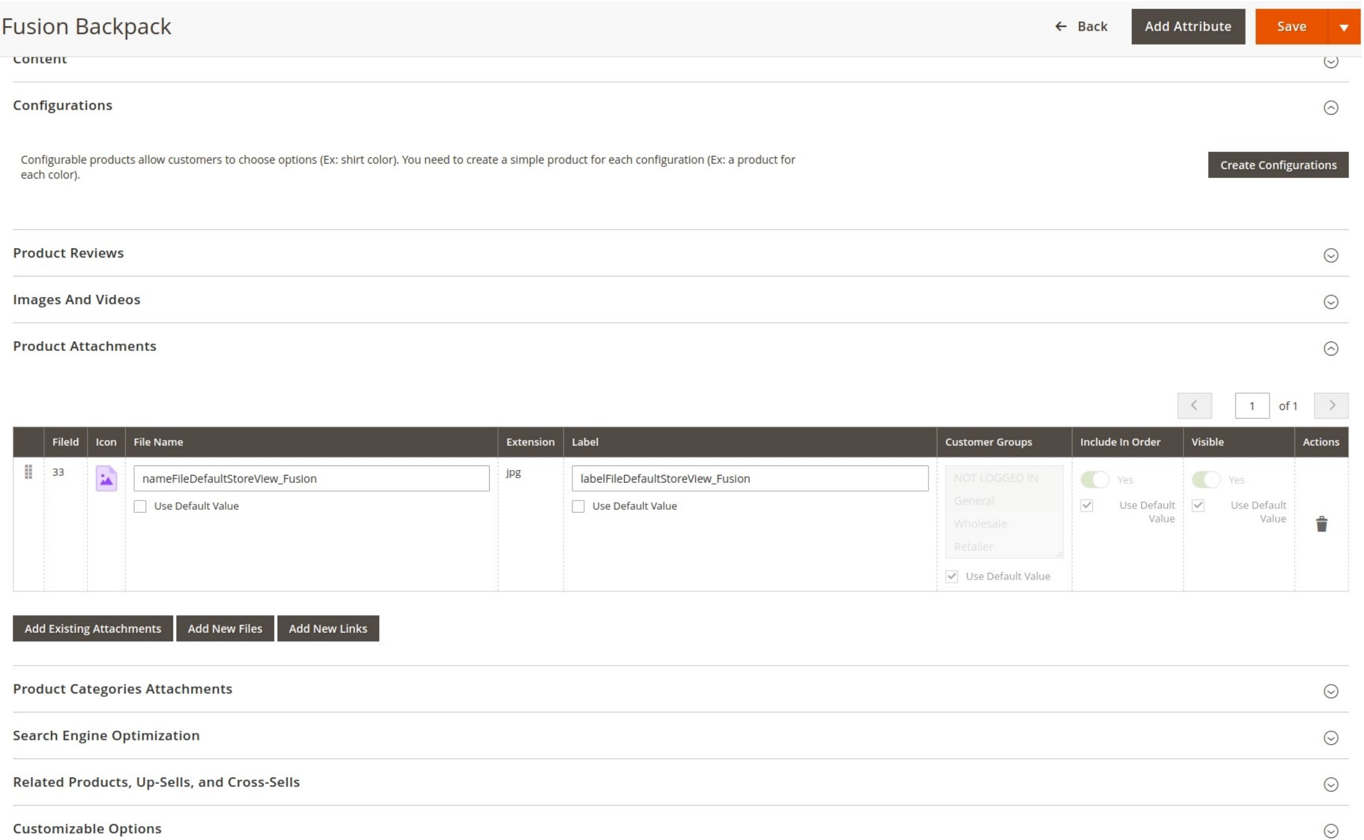
- Using the file/product ID:



Fusion Backpack

Configurations

Configurable products allow customers to choose options (Ex: shirt color). You need to create a simple product for each configuration (Ex: a product for each color).

Product Attachments
